Deal Select

Field Name	Req/Opts	Size/Format	Rules
New/Existing/Use Wizards/Mass Sale	Required	Indicator	User sets selection option to New or Existing. Default = Existing.

New Deal

If a new deal is set-up, Deal Name, Alias, Deal Tracking #, Alternate ID and ANSI ID are required.

Notes:

Department is required to save a pending Host Bank Deal, but are not required to save a Closed Non Host Bank Deal.

The required Deal Alias, Tracking #, Alternate ID and ANSI ID will be generated by the system, if not entered by the user.

Users without *Update Access* status to Create Customer are unable to create a new Customer.

Attribute	Req/Opt	Size/Format	Rules
Pending Host Bank Deal / Closed Non-Host Bank Deal	Required	Indicator (Radio Buttons)	Defaults to *Pending Host Bank Deal*, indicating Host Bank intends to take a position in the new deal. User may override and create a Closed Non-Host Bank Deal. Note: A Pending Host Bank deal cannot be assigned to a Distressed Sales Group. Changing a Pending Host Bank Deal to a Closed Non-Host Bank Deal is valid after initial deal set-up if: Pending Deal has been Unrestricted. Agent is not the Host Bank. No Host Bank lender share exists, even one with a zero lender share. Note: If deal is created as a closed Non-Host Bank Deal, both a *Closed* Event and an *Unrestricted* Event are created and attached. If an Unrestricted Host Bank Deal is changed to a Closed Non-Host Bank Deal after initial deal set-up, a *Closed* Event is created and attached at that time.
Pending Host Bank Deal / Closed Non-Host Bank Deal			Changing a Closed Non-Host Bank Deal to a Pending Unrestricted Host Bank Deal is valid after initial deal set-up if: Department is present No closed circles of any type exist, including Position Adjustment records. Deal is not assigned to a Distressed Sales Group. (See Deal Action *Change to/from Host Bank Deal*) Note: Changing a Closed Non-Host Bank Deal to a Pending Unrestricted Host Bank Deal can also be accomplished, not by choosing a deal option, but by simply adding a Host Bank circle (even one with a zero lender share) to a deal that has no

			released transactions. If released transactions exist, status of deal changes to *Closed Unverified Host Bank Deal*, rather than to *Pending*. However, before the Host Bank circle can be closed, Verify Deal must be selected and passed, and the user must confirm that the Closed Host Bank Deal should be marked as *Verified*. Canceling the only Host Bank Circle in a closed but unverified Host Bank Deal changes the deal back to a closed Non-Host Bank Deal.
Ticket Mode	Required	Indicator (check box)	Defaults No (unchecked). If changed to *Yes* (checked), brings up the *Deal Ticket* window, allowing user to quickly set up a deal/facility skeleton structure. (See *Deal Ticket* window).
Deal Name	Required	40 char	Must be unique within bank.
Alias	Required	20 char	Must be unique within bank. Defaults to Deal Name, but may be overridden.
Deal Tracking Number	Required	12 char	Must be unique within bank. User entered tracking number may be alphanumeric (no symbols). Deal tracking number may also be autogenerated in sequence; in a similar fashion to the way Facility FCN numbers are autogenerated. Deal Tracking Number (DTN) is an optional entry in the External ID table. If DTN is auto generated, the entry field is disabled when creating a new deal. The DTN cannot be changed via deal rename.
Alternate ID	Required	10 Char	System-assigned if not entered by user (System-assigned Alternate ID's are not displayed). Must be unique within the bank. It provides an alternate method to uniquely identify a deal.
ANSI ID	Required	9 char	System-assigned if not entered by user. System-assigned ANSI IDs are not displayed. The ANSI ID is a Loan Identification Number assigned by the Loan Pricing Corporation to uniquely identify a deal. Must be unique within bank, and must be 9 characters exactly.
Currency	Required	Table: Currency	Defaults to Currency associated with the Funding Desk of the creating User's Branch but may be modified to any other (active) currency at any time prior to deal close. Deal currency is protected after deal is closed.
Close Date	Conditional	Date	Applicable only and required for Closed Non-Host Bank Deals. Defaults to Current Business Date. Cannot be a future date. Notes: All references to current business date (throughout this document) refer to the business date as determined by the calendar associated with the Deal's Owner Branch, not the calendar associated with the Branch of the logged-on user. If Pending Host Bank Deal is selected, field is hidden.
Branch	Required	Table: Branch	Available as a patch to Release 6.0.09.08, this is a separately licensed functionality. Licensed clients should refer to the *About Opening Deal* topic from

			the *Deal Notebook* topic in the Deal Online Help for more information. If you are not a licensed client and would like further information about this functionality, please contact your Misys Loan IQ Account Manager. The Branch dropdown field lists the active branches from the Branch table. A branch must be specified to create a new deal. The deal branch name is displayed with the deal name in the title bar of the Deal Notebook. The Deal Branch Name is also displayed against the Deal Name in the deal folder when the deal is added to the deal folder.
Department	Conditional	List Box of User's Departments	Selection list presents departments defined in the User Profile. No default. Note: A valid Department is required to save a Host Bank deal or pass the Verify Deal validations.
Department Subtype	Conditional	List Box of User's Department Subtypes	This is separately licensed functionality. If you are a licensed client, please refer to the *Misys Loan IQ Department Subtype Setup & User Guide* for further information. If you are not a licensed client and would like further information, please contact your Misys Loan IQ Account Manager. Department Subtype is required only when a Department has been selected. Select from the list of active Department Subtype codes. The Subtypes available for selection are those active Department Subtypes that have been associated with the Department selected as defined in the Department Subtype table in Table Maintenance.
Sales Group	Optional	Table: Sales Group	Defaults to Sales Group (if any) of user setting up the deal, but may be overridden. Select one or more values from list of (active) codes. First Sales Group selected will be designated as the primary sales group. If more than one Sales Group is selected, user may change the primary sales group designation. Distressed Sales Groups are not included in selection list for new Host Bank Deals (because only closed Non-Host Bank deals can be assigned to distressed sales groups). Note: Closed Unverified Host Bank Deals (created by adding a Host Bank Circle to a Closed Non-Host Bank Deal) are considered closed, and can be assigned to distressed Sales Groups. However, on the *Deal Select* window, once a Distressed Sales Group has been assigned to a Closed Non-Host Bank Deal, radio button cannot be changed to Pending Host Bank Deal. User must first remove the Distressed Sales Group from the Sales Group List.
Drop in Folder	Required	Indicator (checkbox)	Defaults to *Yes*. If checked (*Yes*), the deal is dropped into the user's Deal Folder on the Loan IQ Desktop.

Existing Deal

User can choose between the deal name, deal alias, deal tracking number, Alternate ID or ANSI ID when searching for existing deals. Check boxes for Active (default), Inactive or Both types of deals are available to make deal selection more efficient

Attribute	Req/Opt	Size/Format	Rules
Identify Deal by Name	Optional	Input (40 char) or select from Deal List	Valid deal names can be accessed as per system security rules.
Identify Deal by Alias	Optional	Input (40 char) or select from Alias List	Valid deal aliases can be accessed as per system security rules.
Identify Deal by Tracking Number	Optional	Input (10 char) or select from Deal Tracking Number List	Valid Deal Tracking Number can be accessed as per system security rules.
Identify Deal by Alternate ID	Optional	Input 10 char or select from Alternate ID list	Valid Deal Alternate ID's can be accessed as per system security rules.
Identify Deal by ANSI ID	Optional	Input (9 char) or select from ANSI ID list	Valid Deal ANSI ID's can be accessed as per system security rules.

Note: Every Deal is uniquely identified by its RID (Record ID) and Alias, displayed on the title bar of the *Update Information* window accessed by selecting the **F8** key. Loan IQ provides the ability to copy the RID or the Alias from the title bar via either the **Copy RID To Clipboard** or **Copy Alias to Clipboard** button. Clicking the appropriate button copies the RID or Alias to the clipboard so that it may be pasted to any other document. In addition, user may always open the Deal Notebook for a specific RID by selecting the **RID Select** on the **right-mouse desktop menu**.

Note on RID: Loan IQ uses the following mechanism to generate RIDs which are unique not only to a particular table but also throughout the database.

The RID field is an 8-byte character string, which logically is split into two sets – prefix and suffix. The RID is constructed such that it generates discreet character sets, which will uniquely identify Loan IQ entity (deal, facility, customer, etc.). The RID prefix is the first two bytes of the character set and is randomly generated from a predefined character set. The last six bytes, the RID suffix, represent the number of seconds elapsed since 1993-01-01-00.00.00.00, and are represented as a 6-byte base 36 value in character format. If multiple RIDs are generated in 1 second, 1 additional second is added to the previous RID value.

Deal Ticket

Attribute	Req/Opt	Size/Format	Rules
Deal Classification	Required	Table: Deal Classification	Select one value from list of (active) codes. No Default. Note: *Restricted* will appear in red text immediately after Deal Classification and will be automatically updated to *Unrestricted*, as applicable.
Admin Agent	Conditional	Button	See Summary tab for rules pertaining to Agent.
Borrower	Conditional	Button	User may now add a Borrower to a deal being created in ticket mode, as well as all pertinent Borrower Information (see Summary tab for rules). Only one borrower may be added for a deal in *Ticket Mode*.
Sole Lender	Required	Indicator (check box)	Defaults to *No*. See Summary tab for rules pertaining to Sole Lender.
Projected Close Date	Conditional	Date	Applicable only to Pending Host Bank Deals. If entered, must be greater than or equal to the current date and must be a valid business day. No Default.
Proposed Commitment	Optional	System Amount Standard	Need not be equal to the sum of the Facility Proposed Commitment Amounts entered for this new deal.
Currency	System Generated	Display	Displays Currency from *Deal Select* window, and is protected.
Facilities List Box	Optional	List Box	Lists the facility name, proposed commitment, currency, facility type and facility subtype (F*acility Subtype is separately licensed and is displayed only if the license file for the Facility Subtype enhancement is installed*) of existing facilities. Total amounts of all existing facilities are displayed, as long as all listed facilities share the same facility currency, and are suppressed on multi-currency deals. Drilling down on a facility brings up the *Facility Ticket for Deal* window.
Add	Optional	Button	Brings up the *Facility Select* window initialized to add a new facility in *Ticket Mode*.
Save	Optional	Button	Saves the new deal.
Unrestrict & Clear Early Discussion Indicator	Conditional	Button	Applicable only to Pending Host Bank Deals. Unrestricts the new deal, subject to user confirmation, and clears the Early Discussion Indicator (sets it = *No*).
Switch to Navigator	Optional	Button	Exits user from *Deal Ticket Mode* window and opens the Deal Navigator. Warning is issued if unsaved changes exist when button is selected.

Mass Sale of Deals

The banks can decide to sell high volumes of deals or facilities to a single buyer due to any of the following reasons:

- Performance of the loans
- Performance of the borrower
- Balance sheet management considerations
- Any other reasons

Loan IQ enables you to sell a large number of deals to a single customer altogether. The facilities for mass sale can be selected across different borrowers, deals, performance status, and so on. There is no definite pattern in terms of the type of loans selected for the sale, and it is completely up to the bank's discretion to select the facilities that are to be sold off.

A facility is eligible for mass sale if it meets the following conditions:

- The seller of the mass deal sale transaction owns 100% contractual share.
- The global current amount for the facility commitment has to be more than zero.
- The facility must not be part of any other mass deal sale transaction.
- The facility is not linked to an active SBA guarantee.

Based on the negotiations between the borrower and the buyer, the bank can decide whether or not to retain the servicing rights to those deals that are sold off. For those retained deals where bank continues with servicing, the bank can choose to terminate servicing operations, thereby transferring the servicing rights to the original buyer.

Mass Deal Sale Select

Field Name	Req/Opts	Size/Format	Rules
New/Existing	Required	Radio button	New to create a new mass deal sale transaction Existing to search for existing active/inactive mass sale of deals transactions System default selection is Existing
Active/Inactive	Required	Indicator	To filter by active or inactive transactions.
Range	Required	Date	Range: From To: A date range from which the existing list of mass sale transactions are listed.
Search By	Required	Drop-down list	Search existing mass sale transactions by Borrower, Buyer, or Seller.
Customer	Optional	Text box	Search existing Mass Sale Transactions by Customer name.

When a user selects New option, the new mass sale deal notebook window opens through which a new transaction can be created.

General Tab

Attribute	Req/Opt	Size/Format	Rules

Seller	Required	Button	No default. Select one seller from customers with host bank profile and status defined as active. In order to send it to validation one seller must be selected. Multiple sellers are not allowed. This becomes disabled once the changes are saved or if the transaction is sent to approval. User cannot make any changes after that.
Buyer	Required	Button	No default. Select one buyer from customers with lender profile and status defined as active. In order to send it to validation a buyer must be selected. Multiple buyers are not allowed. This becomes disabled once the changes are saved or if the transaction is send to approval. User cannot make any changes after that.
Buyer Servicing Group	Required	Button	No default. Select one Servicing Group from the list of locations that the buyer can have. This servicing group will be taken for future calculations
Effective Date	Required	Date	No default date is set. The Effective Date of the mass sale deal. Must be prior to the Expiry Date.
Buyer Remittance Instructions	Required	Button	No default. Select one or more remittance instructions (or multiple currency scenarios) from the list of instructions applicable to the buyer. Only one instruction per currency is allowed.
Price	Required	Percentage	The price at which the transaction happens between the buyer and seller. This price could be at par, at premium and at discount values.
Included facilities:			This group displays the list of deals/facilities which are marked for the transaction along with their details. See below.

Included Facilities Group

Attribute	Req/Opt	Size/Format	Rules
Add Facilities	Required	Button	The *Select Facilities for Mass Sale* window is displayed. See details on page 29
Select All	Optional	Button	Selects all of the displayed deals/facilities to be included.
Deselect All	Optional	Button	De-selects all of the deals/facilities previously selected.
Time Zone	System Generated	Display	It groups all the servicing options like retain servicing and transfer servicing to the buyer
Retain Servicing	Optional	Button	If the user wants to retain the servicing part with the host bank itself. The user has to select the list of deals/facilities for which the service has to be retained and then click the Retain Servicing button, which will change the status of the Retain Servicing

			column from NO to YES. By default, the servicing part will remain with the host bank unless the user decides to change it.
Transfer Servicing to Buyer	Optional	Button	If the user wants the servicing part to be transferred to the buyer. The user has to select the list of deal/facilities for which the service has to be transferred to the buyer and then click the "Transfer Servicing to Buyer" button, which will change the retain servicing column status from YES to NO
Delete	Optional	Button	Deletes the list of deals/facilities which are marked for deletion.

Select Facilities for Mass Sale

This window displays a list of facilities which are chosen for mass deal sale using the Eligible for Mass Sale indicator under MIS code tab at the deal notebook.

The users can select the list of facilities that they want to sell off to the buyer.

This list of facilities can be filtered by narrowing it to one particular borrower as well. However, the default filter lists all the eligible deals/facilities under it.

Once the deal/facilities are sold off using the mass sale transactions they are not be displayed in the list of facilities.

Attribute	Req/Opt	Size/Format	Rules
Check box	Required	Indicator	No default. User has to select the list of deals/facilities that they want to sell using mass sale transaction.
Deal/facility	System generated	Display	Lists all the deals/facilities that are being marked as eligible for mass sale transaction.
Agent	System generated	Display	Host bank, who is the seller of the deals/facilities .
CCY	System Generated	Display	Currency in which the deals/facilities are being processed.
Primary Borrower	System generated	Display	Displays the primary borrower of that particular deal/facility. Note: There can be more than one borrower in a deal, but the system displays only the primary borrower here.
Funded	System Generated	Display	Displays the funded amount in that facility Generally the outstanding amounts are termed as funded amount.
Unfunded	System Generated	Display	Displays the unfunded amount in that facility. Generally the remaining amount of outstanding amounts from the committed amount are termed as unfunded amount For example, let us say the committed amount for that facility is 5,00,000 And the borrower is taken a

			loan(outstanding) for 2,00,000 then, Funded amount: 2,00,000 Unfunded amount : 3,00,000
Performing status	System Generated	Display	Displays whether the loan is in accrual or non-accrual status.
Time Zone	System Generated	Display	It displays the time zone under which the facility exists.
Expand All	Optional	Button	Expands this window to show all the facilities under the list of deals.
Collapse All	Optional	Button	Collapses this window to show only the deal row item.
Ok	Required	Button	Displays the list of deals/facilities in the mass deal sale notebook (which are selected in the Select Facilities for Mass Sale notebook)
Cancel	Optional	Button	Exits the select facilities for Select Facilities for Mass Sale without selecting anything.

Events Tab:

This tab works similar to that of the deal notebook. Refer page 61 for details.

Pending Tab:

The Status, Description and Effective Date of all Pending transactions associated with this mass sale deal are displayed. Drilling down on a selected transaction opens up the relevant Pending transaction notebook and user may view/update, or cancel the transaction, as appropriate.

Workflow Tab:

Displays the Workflow Item Description and any applicable Target Date for all workflow items associated with the mass deal sale transaction. User refers to this page to see "What Needs to be done Next."

Target Date - System creates Target Dates for all generated workflow items. For example, the Target Date for the *Send to Approval*, *Approve* and *Close* workflow items is set to the mass **deal sale's Projected Close Date.**

Note: You can drill down to perform the workflow items, when in *Update* mode (except when Auto Release is the workflow item).

Details – After highlighting an item, displays the full text details of the workflow item.

Comment Tab:

Comments are **optional**, but if entered, both the subject and comment text are required.

The Comments tab or Comment Icon (if using Explorer Mode) is highlighted whenever a comment exists. The comment tab highlight is removed, if the comment is deleted.

Attribute	Req/Opt	Size/Format	Rules
Add	Button	Optional	Adds a Comment

Comment Edit Window			
Created on:	System Generated	Date	System-assigned (entry date).
By:	System Generated	User Name	Identifies author of the comment
Modified on:	System Generated	Date	System assigned (modification date).
By:	System Generated	User Name	Identifies modifier of the comment. Only the original author and the Loan IQ Security Manager may change and/or delete an existing comment.
Subject	Required	40 char	User defined field - maximum length 40 alphanumeric characters.
Comment	Required	256 char	Free-form entry.
OK	Optional	Button	Saves the comment and exits the window.
Cancel	Optional	Button	Cancels changes made to comment.
Delete	Optional	Button	Deletes an existing comment subject to the restrictions above.
Print	Option	Button	Prints the comment.

Mass Deal Sale – File Menu

The following options are available from the Mass Deal Sale File Menu

Open

Save

Delete

Exit

Open

Opens the *Mass Deal Sale Select* window, allowing access to an existing mass deal sale transaction or creation of a new one.

Save

Saves the Mass Deal Sale notebook.

Delete

Deletes Pending mass deal sale transactions only.

Note: A mass deal sale transaction cannot be deleted if a Cashflow already exists, or if pending General Ledger entries exist.

Exit

Closes the open Mass Deal Sale notebook. If the mass deal sale transaction has been modified, the system prompts the user to save the changes before closing.

Mass Deal Sale – Options Menu

The following deal actions are accessible to mass deal sales:

Update

Inquiry

Buyer Notebook

Cashflow

Potential funding

Seller Notebook

End Servicing

Change Effective Date

Update

Update option locks the mass deal sale, places shared lock on the Time Zone associated with the mass sale deal's Owning Branch and removes the protection from all other mass sale deal options available to the user based on User Profile. Mass sale deal notebook must be in *Update* mode in order to select any other Option that will update the notebook. In addition, users who are authorized to Update the Notebook will gain access to **all** of the fields in the Mass Sale Deal Notebook whenever the **Update** option is selected.

Users with authority to perform the **Update** option but who are not authorized to Update the Notebook will be limited to choosing options from the menu that they are authorized to perform. They will not be given overall update access to the mass sale deal Notebook itself.

Note: Mass sale deal may be placed in *Update* mode by selecting the **Update** option or by selecting **F7** or the **Inquiry/Update Mode** button accessible from every tab of the mass sale deal notebook.

Inquiry

This Option is always available to switch the user out of *Update* mode, and returns the mass sale deal to display only.

Buyer Notebook:

Selecting this option gives the user access to the Buyer Notebook for the Buyer to which this mass sale deal sale transaction belongs.

Cashflow:

The Cashflow option brings up the *Cashflow* window and creates Cashflows for this transaction. User receives an **error** upon approval if the cashflows have not been created yet. Please see the separate document, *Misys Loan IQ Cashflows Edit & Validation Rules,* for further details.

Potential Funding:

Selecting this option gives the user access to the Potential Funding notebook, which displays the details about the share adjustments.

Attribute	Req/Opt	Size/Format	Rules
Description	System generated	Display	Displays the name of the deal/facility. It lists all the outstanding/ ongoing fees under that particular deal/facility
Status	System generated	Display	Displays the status of the deal (which is closed) Displays the outstandings/ ongoing fees status as well those are either active or inactive based on their performing effective dates
Repricing	System generated	Display	Displays the date on which the repricing of that loan takes place
CCY	System generated	Display	Defaults to the currency defined for the selected Pricing Option in the **Pricing Option Name** table, if any.
Current Amount	System generated	Display	Displays the current amounts that are yet to be paid or transferred. For example, The loan drawn(outstanding) is $3,00,000 And the borrower has paid $2,00,000 with the ~~old~~ host bank Then the current amount is $1,00,000 Which means the borrower has to pay $1,00,000 to the new buyer henceforth

There are two buttons below the table structure: one for showing the corresponding notebook and the other is to view the adjustment shares.

Once the deal row is highlighted, the button gets enabled as “Deal Notebook” allowing the user to see the deal notebook by clicking the button.

If the user selects the facility, then the button gets enabled as “Facility Notebook” allowing the user to see the facility notebook by clicking the button.

If the user selects the outstanding (which is displayed with the borrower name), then the button gets enabled as “Outstanding Notebook” allowing the user to see the outstanding notebook by clicking the button.

If the user selects the fees (which are arranged based on the released date, incase if there are more than one), then the button gets enabled as “Fee Notebook” allowing users to see the fee notebook by clicking the button.

This button gets disabled once the user selects the fees listed under the outstanding row.

View Adjustment Shares:

This opens a new window displaying the share adjustments that has to be made for the fees.

The View Adjustment Shares button opens the ‘Lender Shares’ screen for the selected outstanding and displays the adjustment of shares caused by the ‘Share Adjustment’.

For further details, see the separate document, “Loan IQ On-Lender Shares Edit and Validation Rules”.

Seller Notebook:

Selecting this option gives the user access to the Seller Notebook for the seller to whom this mass deal sale is sold.

End servicing:

This option gets enabled once the mass sale transaction is complete; the user can transfer the admin rights (of the deals whose admin rights were retained as part of original mass-sale transaction) to the buyer in case if it hasn't been done during the transaction process.

This opens a new manual end servicing transaction notebook, through which the user can select the deals which needs to be transferred. There are buttons like Add Deals and Delete Deals through which the user can add or delete deals based on the requirement. This notebook again goes through the same workflow process as Mass Deal Sale notebook. Once the workflows are done, the admin rights will be transferred to the buyer. This will then reflect in the deal notebook “Admin Agent” column. The user can change the effective date using Options > Change Effective Date.

Mass Sale Deal – Status Menu

The Status Menu is **only** available to pending transactions. These menu options are **only** related to the **status** of the transaction and move it through stages of approval and release, as well as cancellation (and un-cancellation), or review, or returning it to a pending status (now called Return to Awaiting Send to Approval). For further details on new approvals functionality, please see the separate document “Loan IQ Approval Matrix Edit/Validation Rules".

The following options are available in the Mass Deal Sale Status menu:

- Approve
- Cancel
- Release
- Return to Awaiting Send to Approval
- Send to Approval
- Show Approval Status

Cancel

Available only to pending transactions.

Subject to user confirmation, mass deal sale transactions that are pending or awaiting release may be cancelled (and uncancelled).

A cancelled transaction has no workflow items and will not appear in "Work in Process" or on the Pending Transaction page of the Mass sale deal notebook, But the event gets recorded

Change Effective Date:

Once the changes are saved, the Effective Date field of the mass deal sale notebook becomes disabled. If any further changes have to be made to it, then the user can make the modifications through this Change Effective Date option.

Return to Awaiting Send to Approval

Available only to transactions that are in the "Approved" or "Awaiting Release" status. This option returns the outstanding to the "Pending" status. User receives a Warning upon selecting this option and an event is created: *Cannot Return to Awaiting Send to Approval if transaction has released cashflows. User must first cancel the cashflows*.

All the other options such as Approve, Release, Send to Approval and Show Approval Status are disabled for the Mass Deal Sale notebook, as the release process is handled by batch.

Mass Sale Deal – Queries Menu

Query is available to pending and active loans. For Mass Deal Sale notebook , the user can view only the G/L entries.

GL Entries:

Allows the user to view the General Ledger Accounting entries for the mass sale transactions. Buyer, seller, buyer servicing group, buyer remittance instructions are required for the G/L entries to be created. An Individual entry row is created for each deal/facility that is transferred. A Cashflow button is provided to view the cashflows.

For further details, see the separate document, "Loan IQ On-Line Accounting Edit and Validation Rules".

Facility Select

Attribute	Req/Opt	Size/Format	Rules
Ticket Mode	Required	Indicator (check Box)	Defaults to *Yes* (checked) when opened from Deal Ticket Mode, indicating that user should be returned to the *Deal Ticket* window after the New Facility is added. If modified to *No* (unchecked), Facility Notebook will open for the newly added Facility.
Facility Name	Required	30 Char	Must be unique within the deal.
Facility Type	Required	Table: Facility Type	Select one value from the list of (active) codes.
Facility Subtype	Conditional	Drop-down list	This is separately licensed functionality. If you are a licensed client, please refer to the *Misys Loan IQ Facility Subtype Setup & User Guide* for further information. If you are not a licensed client and would like further information, please contact your Misys Loan IQ Account Manager. Select one value from the list of (active) codes. The items for selection are those active Facility Subtypes that are associated with the selected Facility Type (as defined on the Facility Subtype table in Table Maintenance.) A Facility Subtype selection is required if an active Facility Type/Subtype association exists. If only one active Facility Type/Subtype association exists for the Facility Type selected, then the Facility Subtype is automatically populated.
FCN	Required	15 digits	Must be unique within bank. May or may not be autogenerated, based upon information obtained

		maximum	from Table Maintenance. Autogeneration - FCN's are autogenerated from a block of numbers specified in the external ID table in Table Maintenance, and are subsequently protected and cannot be changed when renaming the facility. When the block of numbers is exhausted, user receives an error that the Facility Control Number cannot be assigned, and the new facility cannot be created. No Autogeneration - FCN is user-enterable at facility creation. If not entered, will be assigned by the system but will be hidden from the user, and must be changed (via **Rename Facility** action) to a user-entered value in order to send the deal to approval or to pass the **Verify Deal** validations. Note: Whether auto-generated or not, the FCN must be numeric, and can be a maximum of 15 digits. Its exact length is specified by the **FCN Length** parameter on the System Parameter Table (in GTM) and must be set to be between *8* and *15* characters.
ANSI ID	Required	13 char	System-assigned if not entered by user. (System-assigned ANSI IDs are not displayed). The ANSI ID is a Loan Identification Number assigned by the Loan Pricing Corporation to uniquely identify a facility within a deal.
Proposed Commitment Amount	Conditional	System Standard Amount	Appears on Facility Select for a Host Bank Deal only prior to deal close. Always appears for closed Non-Host Bank Deals and is updateable. Amount entered flows down to the Proposed and Closing Commitment fields in Facility.
Currency	Required	Table: Currency	Defaults to the currency of the deal. User can override by selecting one value from the list of (active) currency codes.

Deal Notebook

Summary Tab

Beginning with Release 5.5.07.08 (Patch) and Release 5.5.10.02 and forward, as per the separately licensed enhancement entitled Processing Area and Deal Classification Combination Error Message, the following functionality applies:

Validation is added to deal closing validation:

If there are active branch and processing area and deal classification row(s) in the new Branch and Processing Area and Deal Classification code table, then for each facility in the deal, if its branch/processing area and the deal classification do not match an active row in the table, an error is displayed.

If there are active branch and processing area and deal classification row(s) in the new Branch and Processing Area and Deal Classification code table, then for the deal, if its branch/processing area and the deal classification do not match an active row in the table, an error will be displayed.

If there are no rows defined at all for a branch or if there are no active rows for a branch in the new Branch, Processing Area and Deal Classification code table, then there is no validation at all for that branch.

Note: Whenever any activity is performed on a Deal and it is saved, the system validates that the Branch/Processing Area/Deal classification combination matches any active row in the branch and processing area and deal classification table and displays an error if there is a mismatch.

The format of the error is: The processing area (“.....") for the Deal (“.....") and Deal classification (“.....") combination is not valid for this branch (“.....".)

Required data must be completed in order to close a Host Bank deal or to pass Verify Deal validations.

Available as a patch to TBD Release 6.0.11.02, access to certain data fields in the Deal Notebook can be restricted based on the user's job function. The system parameter **CUFNB** (Control Updates of Fields in several Notebooks) determines the availability of this functionality. For details, refer to the Deal > About Deal Notebook section of the Online Help.

Available as a patch to TBD Release 6.0.08.08, the following separately licensed, Markit Clear Trade Settlement functionality applies.

For a deal to be eligible for e-settlement trade, deal must be mapped in the E-settlement screen. Current deal mapping functionality will continue to be used when trade is Markit trade.

Available in Release 7.2.7, the separately secured Add Audit Trail View functionality applies.

Loan IQ creates an audit trail for all auditable fields changed by users online or by an API call. The changes to all auditable fields on all of the Loan IQ notebooks are captured. Additionally, changes are captured on auditable fields within the sub-tabs of the notebooks, such as remittance instructions.

Users can access the Audit Trail List screen from any Loan IQ notebook by pressing the F8 button on the keyboard. The Update Information screen is displayed. Click the View Audit button. The Audit Trail List screen is displayed.

Please see the Work in Process Edit & Validation Rules for more details on the Audit Trail List.

Attribute	Req/Opt	Size/Format	Rules
Deal Name and Deal	System	Title Bar	Flow down from Deal (if existing) or from Deal Select (if new). Name can be changed only by

Status	Generated		**Rename Deal** action.
Borrower/Depositor List Box: Add/Delete	Required	Short Name	No Default. Select one or more Borrowers from Customers with Borrower Profiles and a status defined as "Active" (Release 6.0 and forward) and pick Borrower Location (if multiple locations for borrower). In order to send deal to approval or to pass **Verify Deal** validations, at least one borrower must be selected and the location of every borrower in the list must be complete. Cannot add a restricted borrower to an unrestricted deal. Borrowers added after deal has been sent to approval, and borrowers added to a closed deal, must be completed when selected. A Borrower cannot be deleted from the deal once it has been selected as either a primary borrower, as a co-borrower for any of the underlying facilities, or is referenced by existing outstandings. Additionally, if Host Bank is Agent or Sole Lender, every borrower in the deal must have an Assigned Servicing Group at (and after) deal close. **Notes:** Borrowers in a deal where Host Bank is not Agent, do not need an Assigned Servicing Group to approve, verify, or close. However, if Borrower has only one Servicing Group assigned, the system will default to this Servicing Group. Assigning a Servicing Group enables the User to utilize the contacts set-up for the Borrower (regardless if it is an Agented or Non-Agented Deal). A Borrower may be added to a deal only once, regardless of the number of locations defined for that Borrower in Customer Notebook. Host Bank Legal Entity may be added as a Borrower in the Deal.
Borrower	Conditional	Indicator	Set on the *Borrower Details* window. Defaults to *Yes*, indicating that the customer is a Borrower in the deal.
Depositor	Conditional	Indicator	Set on the *Borrower Details* window, indicates if the customer is a Depositor in the deal. Any customer with a completed Borrower Profile can be a Depositor. A Depositor must be defined in order for deposits to be created for the deal.
Make Primary	Optional	Button	The first borrower defined in the deal automatically becomes the primary borrower. As additional borrowers are added to the deal, the designation of the primary borrower may be changed via the **Make Primary** button. In order to send a Host Bank Deal to approval or to pass the **Verify Deal** validations, the primary Borrower in the deal must be identified. Note: The primary borrower in the deal cannot be deleted.

Opening up the **Borrower** drop-down list (click on **Add** button) on the *Deal Borrowers Details* window allows user to select the Borrowers and or Depositors for this Deal.

Note: The primary borrower in the deal cannot be deleted. To delete a Borrower/Depositor (other than the primary), click **Delete**.

Drilling down on a borrower brings up the *Deal Borrower Details* window, displaying the following information (from Customer) for the selected borrower: Borrower Name and Location, Servicing Group, Primary CPIC Code and Description, Primary SIC Code and Description, Expense Code and Description and the External Rating Type, Rating and Effective Date for every External Rating associated with the selected borrower. The **Borrower Notebook** button is available to the General Loan IQ Audience beginning with Release 6.0.08.08. When this button is selected, the Borrower Notebook opens. Refer to the *Misys Loan IQ How to Prepare for the 2008 User Group Enhancements 6.0.08.08 SP* document for further details.

Available in Release 7.3, when licensed for **Modification to Bills Based on Contact Addresses and Co-Borrower**, the following functionality applies.

When Bill Recipients is licensed a “Bill Recipients” button is displayed on the Deal Borrower window. Clicking the “Bill Recipients” button opens the Bill Recipients List window. The Bill Recipients window displays the currently selected recipients and allows recipients to be modified, added, or deleted.

If the window from which the button is clicked is open in Inquiry mode the Bill Recipients window opens in Inquiry mode. If it is open in Update mode the window opens in Update mode after first checking whether there are any unsaved changes. If there are unsaved changes they are saved prior to opening the Bill Recipients window. The button is blue if any bill recipients are currently assigned.

The Bill Recipient window is divided into two blocks. The top block (bill recipient list) holds list of contacts defined at any level and includes columns for Primary, Contact Name, Address Code, Notification Method, Description, Borrower, and Location.

Add, Delete, Save, and Exit buttons are provided.

Add contacts to Bill recipient list:

- The top block in Bill Recipient screen (bill recipient list) displays blank until new recipients are added to the list.
- To open Bill Recipient Selection block, click the Add button.
- There is a dropdown option to select the borrowers associated with the Deal. When a borrower is selected in dropdown option, list of active contacts with Billing purpose will be displayed
- Contact address details (address code) should appear in bill recipient selection list. The mailing address gets defaulted when contacts are listed when borrower is selected.

There will be an option to choose the list of addresses stored at customer notebook level. When Address dropdown is clicked, it should display list of all addresses (address codes) available at Customer level, regardless of the Location.

The address dropdown also displays location details. For example, Borrower profile of Customer has two locations (Location 1 and Location 2). Each location has two addresses each (Location 1 - Add1 and Add2; Location 2 - Add3 and Add4). The dropdown combination is - ***Location1/Add1***; ***Location1/Add2***; ***Location2/Add3***; ***Location2/Add4***]. When user selects Location1/Add1, then only the Address Code (i.e., Add1) is saved in the Address column. Corresponding location details display in column designated for Location.

- There is a Multi-text box to display the address against a address code as users scroll over the address codes.
- When a user selects a desired address, that address gets saved as mailing address for that contact at that level. [Note: The billing address is dependent on the address selected at bill recipient definition level. Selection of address other than the mailing address defined at contact level does <u>not</u> impact the customer level contact address settings. The contact level mailing address is used in the bill only when no bill recipients are defined at any level]

- The check boxes against each contact display unchecked by default. Check the desired contact and click Add To Collection button to include contact in Bill recipient list.
- The contacts get added to bill recipient list and the first contact is tagged as Primary by default. To select a different primary, click on contact and click Make Primary button. A asterisk mark displays before Primary contact. All other contacts are treated as duplicate recipients.
- Click save button to save details in database and click exit button to exit bill recipient list.

List contacts in Bill recipient list:

The contacts are listed in Alphabetical order by Location. Within the Location, contacts are listed in Alphabetical order. For example: A customer Borrower Profile has 3 Locations (New York, California and Washington) and contacts within Locations are listed as below:

California

A

B

C

New York

A

B

C

Washington

A

B

C

Update/Delete bill recipients from Bill recipient list

- To add additional contacts to bill recipient list, click Add button on bill recipient screen.
- Once the borrower is selected from the dropdown, the contacts with billing purpose are displayed in the table. This list filters the contacts which are already party of the bill recipient list.
- To delete a contact, highlight the contact to be deleted and click Delete button.

Validations to delete Primary and duplicate recipients:

If no existing recipient has been selected when the Delete button is pressed, the following error message is displayed: “A bill recipient must be selected."

When the Delete button is pressed (and a bill recipient is selected), the following question will be asked, depending on whether the selected recipient is the primary bill recipient or a duplicate bill recipient:

If User clicks on Duplicate recipient and press Delete Button, then system should display the error below:

“Do you really want to delete the selected duplicate bill recipient?”

If the answer is “Yes”, the bill recipient will be immediately deleted from the database. Otherwise, it will not be deleted.

A Primary bill recipient can be deleted subject to update access to < new application function>

Delete Bill recipients from Deal Bill recipient List

- Deleting Primary recipient from the list at deal level causes permanent deletion of primary recipient from the bill recipient list. Loan IQ prompts the warning message: “This will permanently delete Primary Recipient from the Bill Recipient List and the bill will be addressed to the mailing address defined in the Contact notebook. Do you wish to Continue?” If users click “Yes” then click OK , the primary recipient is permanently removed from the bill recipient list.

Delete Bill recipients from Bill recipient List

- If bill recipient list contains both Primary and duplicate recipients, then deletion of Primary bill recipient is restricted. In that scenario while deleting the primary recipient, Loan IQ displays an error message, “Primary recipient is mandatory, please tag another contact as Primary before deleting this Primary Recipient”.
- If the bill recipient list has only Primary recipient, then Loan IQ displays the warning: “This will permanently delete Primary Recipient from the Bill Recipient List and the bill will be addressed to the recipient defined at the higher level. Do you wish to Continue?” If users click Yes then click OK, the primary recipient is permanently removed from the bill recipient list.

[Note: Deleting the bill recipient just deletes the association with the customer contact. No customer level information is deleted.]

The block below Bill Recipient selection opens only when users wish to add new/additional bill recipients. If the notebook is inquiry mode, the Add, Delete, Save, and Exit buttons displaydisabled, but in update mode these buttons display enabled. To add contacts to the Bill Recipient list:

Add new billing contact

- To define a new bill recipient from the bill recipient window, select a borrower and click Add New Contact button [Note: New recipients are always associated with the borrower, hence Borrower name should be selected first (Borrower select dropdown).]
- Borrower + Add New Recipient opens existing Contact details window where users can input contact details. The contact details window has a new “**Bill Recipient only**” indicator that defaults checked and greyed out, All other fields except Contact name details, Notification details, preferred language fields are disabled for data entry. Billing purpose is auto populated. In addition, users should input Mailing Address Details and Location. This adhoc contacts/bill recipient can’t be used for other purposes, unless the Bill Recipient only indicator is unchecked. [Note: The Bill recipient Only indicator displays in all contacts as a read only field]
- Location must be selected to save the adhoc contact.

This newly added contact automatically gets added to the bill recipient panel in the same screen (Bill recipient list).

Adding bill recipients at Deal Level

Duplicate recipients need not be defined at Deal level.

When users select bill recipients (by clicking the Bill recipient button at Deal level then clicking the Add button, select borrower, and select bill recipients using check box, and click Add to collection), if the list contains more than one contact, then Loan IQ displays the error: “You can define only a Primary recipient at Deal level. Please select any contact as bill recipient and Add to collection”

If users want to delete a primary recipient at deal level, then it is possible to delete a primary recipient. User level security applies to delete a primary recipient at any level. At deal level, if users delete Primary Recipient, the bill recipient list is cleared.

If users wish to delete a primary recipient and add a new bill recipient:

From the Bill recipient window, click the Add button to select contact then click Add To Collection button after selecting a primary recipient. There is an information message: “This contact will overwrite the existing primary recipient. Do you want to continue? If users select OK, then the

selected contact becomes a new primary bill recipient at Deal level. If users click the Cancel button, there will is not any change to the existing Primary.

As per current functionality, when a billing contact has multiple preferred notification methods, they are all included in the XML bill. Users are able to view RID of the Bill Recipients through online Loan IQ.

Note: Users can drill down on an existing billing recipient to open the details screen. This opens the Contact Details window in Inquiry mode. The ability to update the contact information (contact name, notification method/details), is subject to update access for the Customer Contacts user function.

Opening up the **Location** drop-down list on the *Deal Borrowers Details* window allows user to select a different location for this borrower. Location selected after deal has been Sent to Approval or Closed must be completed when selected. After changing the location, Servicing Group associated with the old locations is dropped, and, if Deal is closed and Host Bank is Agent or Sole Lender, a new Servicing Group associated with the new location is assigned by default if Borrower has one contact only. If Borrower has more than one contact, the new Servicing Group associated with the new location must be assigned.

Available as a patch to Release 6.0.10.05 as per separately licensed enhancement, Withholding Tax Rate Calculation, the **Tax Information** button on the *Deal Borrowers Details* window is available when the Admin Agent of the Deal is a Host Bank Entity. Selecting the Tax Information button displays the *Lender Tax Details for <Borrower>* window. The button is enabled when users add at least one Facility whose owning branch is set to *Y* in system parameter HBATW. The Tax Information button is highlighted blue whenever values are added. When the button is blue in the Deal notebook it automatically highlights the Tax Information button in the related Facility notebook as well.

Lender Tax Details for <Borrower> window – displays associated with that Deal. When users enter or update a tax attribute value at the Deal level, all underlying Facilities which have this screen are automatically updated with the same values on real time basis. Users can also modify a tax attribute at the Facility level, as well.

Note: Any tax attribute entered/updated by accessing this window in the Deal notebook overrides the values, if any, available at the Facility Notebook. An Event is created in the Events tab of the Deal notebook whenever a tax attribute is entered/updated via the *Lender Tax Details for <Borrower>* window in the Deal notebook.

For further information, please refer to the Facility Edit & Validation Rules, Borrower/Depositor Details section.

Selecting the **Servicing Group** button on the *Deal Borrowers Details* window brings up the standard three-part *Servicing Groups Listing* window, displaying all Servicing Groups (and their Group Members (contacts) and Remittance Instructions) defined for this Customer/Location. User may assign a different Servicing Group to this Borrower/Location and/or make changes to it. If Host Bank is Agent or Sole Lender; Borrower must have a Servicing Group assigned in order to close the deal. (See explanation of Servicing Groups in *Misys Loan IQ Customer Edit & Validation Rules* document.)

Available in Release 7.2.6 the separately licensed Multiple Delivery Methods functionality applies.

After setting the borrower servicing group in the Deal Borrower window, when users click OK, the 'Override Servicing Group' option message is displayed. The options are

Do Not Override Servicing Group(s) Assigned at Facility and Outstanding Levels

Override Servicing Group(s) Assigned at Facility and Outstanding Levels

The default setting for this option is Do Not Override. If users elect to change the default to 'Override Servicing Group(s), a warning message is displayed:

"You have chosen to override the Servicing Groups assignment at Facility and Outstanding levels for this Borrower."

If 'Yes' is selected the new servicing group is set for each facility and outstanding of the borrower, however if 'No' is selected then Override Servicing Group dialogue is displayed with the'Do Not

Override Servicing Group(s) Assigned at Facility and Outstanding Levels' option selected by default. Selecting OK on 'Do Not Override Servicing Group(s) Assigned at Facility and Outstanding Levels' closes the window and no changes are made at Facility or Outstanding levels.

Notes:

The ability to choose to override or not override servicing groups at facility and outstanding levels is made available to users when assigning a new servicing group at the Deal/Borrower level. If the Override option is selected at the Deal level, all lower level servicing group assignments made for the same borrower within the deal are overriddden.

Servicing Group details can be changed (contacts added or deleted, remittance instructions added or removed) at the Deal/Borrower level using the Customer Notebook/Profile tab.

If Servicing Group details are changed at the Deal / Borrower level then, if the Servicing Group has been assigned at the Facility level the changes impact at both Deal/Borrower and Facility level.

These changes also flow down to any outstanding under the facility that uses the same servicing group.

Available as a patch to Release 6.0.10.05 as per separately licensed enhancement **Link NSG with SGR**, SGR Ref ID is available as a read-only value for Customers with Borrower Profile. NSG Ref ID field is available for Primary Borrowers with a valid SGR Ref ID. Select from the drop-down list of NSG Ref IDs populated from the NSG Ref ID table. Licensed clients should refer to the *Customer Online Help* for further documentation. For licensing and further details regarding this functionality, please contact your Misys Loan IQ Account Manager.

Available in a general release TBD and patched to Release 6.0.10.05, the following Enhancement to Link NSG with SGR Functionality applies. Only NSG Ref IDs that are associated with the SGR ID provided for the customer are displayed in the NSG Ref ID drop-down list.

Selecting the **Preferred Remittance Instructions** button on the *Deal Borrower Details* window brings up the standard window allowing the user to pick one or more of the Remittance Instructions already associated with the chosen Servicing Group as the Preferred ones to be used for this Borrower in this specific deal (for cashflows, borrower bills and Notices, etc.). May also enter free form From and To information (variables) that will be referenced in the communications (Notices, money transfer messages) concerning this Borrower in this specific deal.

Available in Release 7.4.3, when licensed for **Float Charges**, the following functionality applies:

A new optional button **Float Charges** is introduced in the **Deal Servicing Group Details** window. When the user clicks on any preferred Remittance instruction this button becomes visible. When the user clicks on the Float Charges button, the **Float Charges Details** window appears.

Attribute	Req/Opt	Size/Format	Rules
Float Days Applies	Optional	Checkbox	The **Float Days Applies** field indicates whether the Float Charges applies for the deal or not. If **Float Days Applies** is enabled, then **Float Days Options** drop down is a mandatory field to be entered by the user. If "**Float Days Applies**" is disabled, then **Float Days Options** drop down is greyed out and displays a blank value. The value for **Float Days Applies** is unchecked by default. This field provides the option to choose one of the Float Charges option amongst the following values :

			• Actual Number of Days • Straight Number of Days • Lesser of Actual and Straight Number of Days • Flat Charge **Note:** **Float Days** is the Number of days needed to convert the borrowers' cash receipts to cash **Float Charges** is the Fees the bank charges the borrower for making the funds available for Float number of Days in advance.
Float Days Options	Conditional	Drop down	This dropdown is enabled only when **Float Days Applies** check box is enabled. The default value for this drop down is "**Actual Number of Days**". If "**Float Days Applies**" is disabled, this drop-down is greyed out and displays a blank value. This field provides the option to choose one of the Collection Days Fees option amongst the following values : **Value** — **Description** Actual Number of Days — This field indicates the number of days needed to convert the borrowers' cash receipts to cash as defined by the FED. Straight Number of Days — This field indicates the number of days needed to convert the borrowers' cash receipts to cash as specified by the business user. Lesser of Actual and Straight Number of Days — This field indicates the lesser value between Actual and Straight Number of Days for Float Charges. Flat Charge — This field indicates a flat amount charged for Float Charges.
Straight Days	Conditional	3 digits/ Check box	This field's is only displayed if one of the following values is selected in the Collection Days Options list box: Straight No. of Days Lesser of Actual and Straight No. of Days This is a mandatory option if it is displayed. The value Defaults to 0 (zero).
Amount	Conditional	3 digits/ Check box	This field's is only displayed if the Float Days Options Value is "**Flat Charge**". Otherwise, it is not displayed.

			This is a mmandatory option if it is displayed. The value Defaults to 0 (zero).

Available in Release 7.4.3, when licensed for Payment Application Hierarchy, the following functionality applies:

A new optional button Payment Application Hierarchy is introduced in the Deal Servicing Group Details window. When the user clicks on any preferred Remittance instruction this button becomes visible. When this button is selected it displays the Payment Application Hierarchy Details Selection List window.

Payment Application Hierarchy Details Selection List Window:

This window displays and captures the priority order of Loan Outstandings by which an external bank system shall apply the sweep payments from the Cash Dominion Accounts to loans under the deal. Hierarchy set up is done post deal close, once (at least one) loan drawdowns have been released.

The Payment Application Hierarchy set up is done in two steps:

User can select the Active Loan Outstandings under the deal in the Available list which are moved to the Selected list.

User can change the order of the Selected Loan Outstandings via Drag and Drop in the Selected list.

Attribute	Req/Opt	Size/Format	Rules
Available	Optional	List (showing multiple attributes)	This displays the list of Loan Outstandings to be included in the Payment Application Hierarchy. Only the active loan outstandings are displayed under the deal The following attributes are displayed : • Alias (Loan Outstanding) • Status (Loan Outstanding) • Facility The default order of the loans is alphabetical order based on Loan Alias. The user can select one or more rows in the **Available list**. The selected rows are displayed by the system under the **Selected List** in the same order. If the user chooses to add more outstanding loan records to an existing hierarchy, the additional outstandings that are selected from the Available List are appended at the end of the Selected List.
Selected	Optional	List (showing multiple attributes)	This shows the hierarchy of the selected Loan Outstandings for Payment Application Priority. The hierarchy is displayed as blank till it is set up for the first time. The following attributes are displayed : • Alias (Loan Outstanding) • Status (Loan Outstanding) • Facility

			The selected loans can be re-ordered via drag and drop, which includes re-ordering multiple loans together. User can choose to remove one or more Loans from the Selected list by selecting that row.
Search	Optional	Text box	This Search capability assists the user to choose a particular loan outstandings under the deal.
OK	Optional	Button	This button confirms and saves the hierarchy.
Cancel	Optional	Button	This button cancels any changes made in the window.

Note: The Float Days (previously called Collection Days) and Payment Application Hierarchy (previously Payment Application Priority Hierarchy) has been moved from the MIS Codes tab to the Deal's Preferred Remittance Instruction.

Available in Release 7.4.3, when licensed for **Asset Based Lending**, the following functionality applies:

A new optional button **Double Side Posting Impact** is introduced in the **Deal Servicing Group Details** window. The Update Collateral Value on Principal Payment checkbox in the MIS Codes must be checked for **Double Side Posting Impact level** to work.

When this button is selected it displays the **Double Side Posting Impact** window.

Note : Single Vs Double Side Posting: When a payment is received through the Borrower's Cash Dominion account:

Single Sided Posting - Only the Loan Outstanding in Loan IQ will be reduced.

Double Sided Posting - Both the Loan Outstanding (in Loan IQ) and Account Receivable Value is reduced when a payment is made.

The **Double Side Posting impact** is protected by Deal Change Transaction and the user can view/update the same for the deal's Preferred Remittance instruction.

When the user clicks on the **Double Side Posting impact** button the following window opens **Double Side Posting impact**

Attribute	Req/Opt	Size/Format	Rules
Method	System Generated	Table: Remittance Method	This selects one value from list of the active codes.
Account No	System Generated	Text box	Displays the account number related to the Remittance instruction. For more details please check the Customer Ed-Val.
Description	System Generated	Text box	Displays the short description of the Remittance instruction.
Currency	System Generated	Text box	Displays the currency related to the Remittance instruction
Double Side Posting Impact	Optional	List (showing	This allows the user to set the Double Side Posting impact level for that particular

		multiple attributes)	Remittance Instruction. This field provides the option to choose one of the Double Side Posting Impact Level option amongst the following values : **Value** / **Description** Collateral Account Level — This field indicates that the principal payment will impact a particular Collateral Account in the ABL Borrowing Base module Overall Borrowing Base Level — This field indicates that the principal payment will impact the Overall Borrowing Base in the ABL Borrowing Base module No Impact — This field indicates that the principal payment will not reduce the Collateral value in the ABL Borrowing Base module
OK	Optional	Button	This button saves the changes made in the window.
Cancel	Optional	Button	This button cancels the changes made in the window.

Note: Selection of preferred remittance instructions is **not required to approve or verify the deal.**

Note: Beginning with Release 6.0.08.05 (Patch) and Release 6.0.08.08, Preferred Remittance Instructions set up at the Outstanding level override the Deal level preferred remittance instructions for the following parties:

Borrower/Depositor

Lenders

Admin Agent

Attribute	Req/Opt	Size/Format	Rules
Alias	System Generated	Display	Flow down from Deal (if existing) or from Deal Select (if new). Can be changed only by **Rename Deal** action.
Deal Classification	Required	Table: Deal Classification	Select one value from list of (active) codes. No default.
Admin Agent	Conditional	Button	See Admin Agent Rules below.
SLM Eligible	Optional	Indicator (checkbox)	Available beginning with Release 6.0.08.08 (Patch) and Release 6.0.09.11 and forward, the following separately licensed SLM Interface functionality applies. Default depends on the System Parameter **SLMID** (SLM Eligible Indicator Default) setting. When the indicator is set to *Y* (checked), the deal is SLM Eligible. When the indicator is set to *N* (unchecked), the deal is not SLM Eligible. User must have *Update* access to the **Deal SLM**

			Indicator(s) application function to modify this indicator in the Deal Notebook. SLM Eligible indicator can be modified by clicking **Options > Toggle SLM Eligible Indicator**. Licensed clients should refer to the *Misys Loan IQ Online Changes for SLM Interface Setup & User Guide* document for further documentation. If you are not a licensed client and would like further information about this functionality, please contact your Misys Loan IQ Account Manager. Beginning with Release 6.0.08.08 (Patch), the following separately licensed Markit Clear Inventory Messages functionality applies: When the Deal level SLM Eligible checkbox is checked, facility level SLM Eligible will be automatically checked for all facilities beneath the deal. When the Deal level SLM Eligible checkbox is unchecked, facility level SLM Eligible will be automatically unchecked for all facilities beneath the deal When the Deal level SLM Eligible checkbox is checked, the Deal, all facilities and outstandings beneath the deal will be eligible for Markit Clear Inventory message.
Sole Lender	Required	Indicator (checkbox)	See Sole Lender Rules below.

Admin Agent Rules

Refers to Deals Administrative Agent. Agent's information is required to send Host Bank deal to approval or to pass **Verify Deal** validations. Agent is never required for Non-Host Bank Deal.

Button selection brings up Agent window, allowing selection of Customer, Location, Servicing Group and Preferred Remittance Instructions:

Customer - Must be an Unrestricted Customer with a Lender Profile and a status defined as “Active” (Release 6.0 and forward) but need not appear as a lender in the deal. Host Bank cannot be named as Agent when setting up a Closed Non-Host Bank Deal, and Host Bank cannot replace or become the Agent on a Closed Host Bank Deal, where a Non Host Bank customer is agent. A Host Bank Agent may be replaced by a Non Host Bank Agent on a Closed Host Bank Deal, but once this is done, the Agent may not be changed back to a Host Bank Customer.

If Agent is already a Host Bank and none of the underlying facilities has its own local Main SG (defined as one with same Host Bank Lender but different SG) then Admin Agent may be changed to another Host Bank. New Host Bank Agent Name/SG will flow down to Main SG of all underlying facilities. However, if any local Main SG's exist at facility level, Admin Agent may not be changed to another Host Bank. Host Bank may always be replaced as Agent by a Non-Host Bank Lender.

Note: When Host Bank Agent is changed to a Non Host Bank Agent and a Host Bank Main SG has been defined for any facilities in the deal, the Main SGs will be deleted.

Location - Must select one of the locations set up for this customer's lender profile. Agent Location must be complete when deal is sent to approval.

Servicing Group - Brings up Servicing Groups associated with Lender/Location, for user's selection. Servicing Group must be associated with a branch.

Preferred Remittance Instructions - Allows the user to pick one or more of the Remittance Instructions already associated with the chosen Servicing Group as the Preferred ones to be

referenced by borrowers and lenders when communicating with this Agent regarding this specific deal. May also enter free form From and To information (variables) that will be referenced on these communications.

Toggle H.B. (Host Bank) Corresponding button:

Allows User to flag which Host Bank Preferred Remittance Instruction(s) should be used as the Host Bank Corresponding Instruction. The toggle allows for *Yes* or *No* selection, and the button will be disabled and indicator shown as *N/A* for either Non-HB entities or non-applicable instructions. When looking for Host Bank corresponding instructions (to match to Incoming Money Transfer - Fed/CHIPS, IMT and Check) in preferred remittance instructions, the System first checks for a valid corresponding instruction with this Toggle H.B. Corresponding Indicator set to *Yes*. If there is only one such valid instruction, it will be used. If there are multiple such preferred remittance instructions, the System will select the first one. Otherwise, the System will look for the first preferred instruction which meets the criteria for use, and if none meet the criteria, then the System will look for the standard instruction; if no standard instruction exists that meets the criteria for use, then the System will look for the first one in the servicing group that meets the criteria for use.

When looking for the preferred instruction for a cashflow with a host bank customer, if there is only one valid preferred instruction regardless of the setting of the indicator, the System will use that instruction. If there is more than one valid preferred instruction but there is only one with the indicator set to *No*, the System will use the preferred instruction with the indicator set to *No*. Otherwise, the System will look for the standard instruction. In order to be considered valid, the corresponding Host Bank instruction must meet the following criteria for use: same product, balance type and currency and the opposite direction (always To the Host Bank).

Auto Do It - When adding a Preferred Remittance Instruction to a Deal Servicing Group, the Auto Do It flag is set the same as it is on the Customer Notebook's Remittance Instruction page at that point in time. If a customer wants to change the Auto Do It flag as set on any particular deal, since this flag for Preferred Remittance Instructions is overridable, they can easily do this from the *Remittance Instruction Detail* window within the Customer Notebook. Clicking the **Where Used** button brings up a window listing all of the deals where this instruction is used as a preferred instruction. Drilling into one of the specific deals brings up the *Deal Servicing Group Details* window where the user can very easily use the **Toggle Auto Do It** button to change this field to their preference for that particular deal.

Note: Selection of preferred remittance instructions for the Agent is not required to approve or verify the deal.

Delete Agent- Only pending Host Bank Deals and all Non-Host Bank Deals can have their Agent deleted. User will receive a warning that Agent will be deleted.

Notes:

Changing the Agent on an approved or closed deal, or a deal with closed primaries, creates an event as a record of the change.

If an amendment number is used, the amendment must be one that exists already and has been released.

A host bank sole lender deal must have a host bank Agent, and if primary circle exists, both the Agent and the primary circle must specify the same lender name and Servicing Group.

After a Sole Lender Deal is closed, the Servicing Group assigned to the Agent may be changed. If the Sole Lender Deal is Awaiting Approval or Approved, it must be returned to pending in order to change the Servicing Group assigned to the Agent.

Sole Lender Rules

Defaults to *No*. Sole Lender may be modified under following conditions:

Sole Lender can be checked *Yes* if Agent is blank or is Host Bank.

Agent can be set to non-Host Bank only if sole lender is not checked (=*No*).

Agent can be Host Bank whether or not Sole Lender is checked.

In order to send pending Sole Lender Host Bank Deal to approval:

Agent must be Host Bank

Must be one Host Bank Primary or no primary (and system will generate it).

Sole Lender Host Bank Deals, after Send to Approval through Deal Close, must meet the following conditions:

Can make deal non-Sole Lender

Agent cannot be removed but may be changed to another Host Bank.

Cannot cancel the Sole Origination Primary unless return deal to pending status or make deal non-sole lender.

Host Bank Deals, after Send to Approval, which are not Sole Lender:

Can make deal Sole Lender only if Agent is Host Bank and only one Host Bank contractual circle exists (must be origination primary).

If deal is Closed Non-Host Bank Deal:

Sole Lender cannot be checked *Yes*.

Primaries may or may not exist.

Agent cannot be Host Bank.

Verifying Closed Unverified Host Bank Deal:

Sole Lender can be checked *Yes*, but only one Host Bank primary can exist, and it must be an origination primary and must note the same lender and Servicing Group as the Agent.

Attribute	Req/Opt	Size/Format	Rules
Closed Date	System Generated	Date	Host Bank Deal - Set by **Close Deal** action, and subsequently updated if user drills down on Deal Close Event and changes its Effective Date. Cannot precede Deal Agreement Date, must be less then or equal to the earliest facility effective date, and must be a valid business day. Non-Host Bank Deal - Set to value entered by user on *Deal Select* window when the new deal is created as closed, but may be modified. Cannot be a future date.
Agreement Date	Optional	Date	Cannot be a future date. If entered after Deal Close, cannot exceed Deal Closed Date.
Projected Close Date	Optional	Date	Available only prior to Deal Close. User may enter the date on which the Deal is **expected** to close. Cannot be less than the current business date.
Funding Date	Optional	Date	Beginning with Release 5.4 and 6.0, the following functionality applies: The Target Close Date is calculated based on this date if it exists and is greater than the Deal Proposed Date.
Currency	System Generated	Display	Displays the currency selected on Deal Creation. May only be changed via the **Change Currency** option.
Facility Add Cutoff Date	Optional	Date	Beginning with Release 5.5 and forward, the following functionality applies:

			Defaults to blank. User may enter the Date (Facility Add Cutoff Date) after which no facilities may be added to a Closed Deal via a Deal Amendment transaction. If the Facility Effective Date of a new facility being added to a closed Deal (via a Deal Amendment) is later than the specified Facility Add Cutoff Date, then an error is issued and the Deal Amendment Transaction cannot be released. An error is issued if the Facility Add Cutoff Date entered is earlier than either the Deal Close Date or the Effective Date of all existing Facilities. A warning is issued at Send to Approval and Approve if the Amendment Transaction will not be able to be released because the Amendment Effective Date is later than the Facility Add Cutoff Date and it includes a Facility Add/Unscheduled Increase transaction. **Note:** The Facility Effective Date of a Facility added to a Closed Deal via a Deal Amendment transaction is always equal to the Effective Date of the Deal Amendment transaction itself.
Projected Close Date	Conditional	Date	Applicable only to Pending Host Bank Deals. If entered, must be greater than or equal to current date and greater than or equal to Deal Agreement Date (if present) and must be a valid business day. No default.
ISIN/CUSIP	Optional	Button	Brings up the ISIN/CUSIP Editor, allowing the entry or modification of the 12-digit ISIN or 9 Digit CUSIP number, as well as the **Unlisted** checkbox. Available whether the deal/facility is pending or closed. Whenever an ISIN and/or CUSIP is added, deleted or modified, an Event is created on the Events Tab of the Deal or Facility Notebook. Neither ISIN and/or CUSIP numbers are required for Deal Close, however for pending deals, a warning will be issued on deal close if a CUSIP number has not been entered for the deal or any of its underlying facilities. A deal or facility may have both and ISIN and CUSIP number. **Note:** CUSIP and ISIN identifiers are converted to uppercase after the user enters them.
ISIN	Conditional	Display	Displays the 12-digit ISIN. There is no validation other than it must be 12 characters. **Does not have to be a unique number.**
CUSIP	Conditional	Display	Displays the 9-digit CUSIP number. Must be a valid CUSIP number. CUSIP number does not have to be unique, however, a warning will be issued if the CUSIP already exists in another deal or facility.
Unlisted	Conditional	Display	For informational purposes only. Indicates whether a deal or facility ISIN/CUSIP is publicly listed with the S&P CUSIP Bureau

Global Deal Amounts:			
Proposed Commitment	Conditional	System Amount Standard	Host Bank Deals: Proposed Commitment is enterable and modifiable at the deal level until deal is closed. No default. Must equal aggregate of proposed commitment amounts for the associated facilities when the Host Bank deal is closed. Note: If the deal is structured to support multiple currency commitments, the aggregate of the facility commitment amounts is calculated in the deal currency using FX Rate assigned at the facility level: If both Facility Currency and Deal Currency are an "In" currency, exchange will be based upon the EURO exchange rate, found on the Euro Funding Desk; If both are "Out" currencies, spot rate from the user's Funding Desk will apply, or can be overridden by the user. If one currency is "In" and the other "Out", FX Rate is derived from the Euro to "In" currency rate and the Euro to "Out" currency. When Host Bank Deal is sent to approval or **Verify Deal** is executed, a warning (which may be overridden) is issued if aggregate facility and global deal proposed commitment amounts are not equal. Non-Host Bank Deals: Are created as already closed, and Proposed Commitment is enterable and modifiable at the deal level at any time. The Deal's Proposed Commitment may also be modified at any time on a closed Unverified Host Bank Deal. Note: Changing the Proposed Commitment on a Closed Non-Host Bank Deal or a Closed Unverified Host Bank Deal is allowed only at the deal level. The facility Proposed (and Closing) Commitments are protected on any closed deal, including Closed Non-Host Bank Deals and Closed Unverified Host Bank Deals. Note: If Sole Lender Deal is checked *Yes*, Deal Proposed Commitment is set to the total of the Facility Proposed Commitment Amounts, if present. (Deal Proposed Commitment can still be entered and will not be overridden unless Facility Proposed Commitment Amount(s) is entered).
Closing Commitment	System Generated	System Amount Standard	Not enterable. Will be populated as an aggregate of the closing commitment amounts for the associated facilities within deal. Note: If the currency of the facility is different to that of the deal, the system uses the FX rate chosen at the facility level to calculate closing commitment. If this rate is never changed the circle and deal-closing commitment will be based on this rate when the deal closes.
Current Commitment	System Generated	System Amount	Not enterable. Will be populated as an aggregate of the current commitment amounts for the

		Standard	associated facilities within deal. Note: Is equivalent to the closing commitment at time of deal closure, but if multiple currency commitments are involved, will be calculated in accordance with the current FX rates stored at the Facility level, Restrictions tab.
Host Bank Share Amounts:			
Proposed Commitment	System Generated	System Amount Standard	Not enterable. Populated as an aggregate of the proposed commitment amounts on the Host Bank Lender shares within the deal. Note: If multi-currency FX historical rate applied, see Global Proposed Commitment above.
Closing Commitment	System Generated	System Amount Standard	Not enterable. Populated as an aggregate of the closing commitment amounts on the Host Bank Lender shares within the deal. Note: If multi-currency FX historical rate applied, see Global Closing Commitment above.
Contractual Gross	System Generated	System Amount Standard	Not enterable. Populated as an aggregate of the contractual gross amounts on the Host Bank Lender shares within the deal. Note: If multi-currency FX current rate is applied, see Global Current Commitment above.
Net Commitment	System Generated	System Amount Standard	Not enterable. Populated as an aggregate of the net commitment amounts of the Host Bank Lender shares within the deal. Suppressed unless the user has *View All* access to All Risk Books. Note: If multi-currency, the FX current rate is applied.
Non-Bank Deal	System Generated		Legend (in red) clearly identifies Non-Host Bank Deal. Unless the **Pending Host Bank Deal** default setting on Deal Select is changed to **Closed Non-Host Bank Deal**, all new deals default to *Host Bank* status and will remain so unless **Change to Non-Host Bank** option is subsequently selected. Once a new deal is set up as a Closed Non-Host Bank Deal, it will remain so until one of the following occurs: If deal is not assigned to a Distressed Sales Group and has no closed circles of any type attached to it, user may select **Change to Host Bank Deal** and transform it into a Pending Unrestricted Host Bank Deal, or User creates a Host Bank circle on the closed Non-Host Bank Deal, transforming it into a Closed but Unverified Host Bank Deal.
Commitment Summary by CCY	Optional	Button	The Commitment Summary by CCY button is separately licensed functionality. This button will be enabled only after the license file for the Summary by Currency in Deal functionality has been installed. Upon selection of the **Commitment Summary by CCY** button, the Summary by Currency for Deal window appears. The *Summary by Currency for Deal* window lists, for each currency in the Deal, the aggregate Global Closing Commitment, the

			Host Bank Closing Commitment, the Global Current Commitment, the Host Bank Current Contractual Gross Commitment and the Host Bank Current Net Commitment. Licensed clients should refer to the *Misys Loan IQ Summary by Currency in Deal Setup Guide and User Guide* for further information. If you are not a licensed client and would like more information about the Summary by Currency in Deal functionality, contact your Misys Loan IQ Account Manager.
Market Rate in Effect	System Generated	Display	Beginning with Release 6.0.08.08 (Patch) and 6.0.09.05 and forward, the following Market Based Pricing Model functionality applies: When any Market Rates type is selected in the Facility Notebook the Deal Notebook displays 'Market Rate in Effect'. 'Market Rate in Effect' is used because a User may choose to set up more than one Facility each with its own type of Market Rate.
Gross-Up Cap Amount	Conditional	System Amount Standard	Available in a general release TBD and patched to Release 6.0.10.05, the following separately licensed Withholding Tax for Capital Gains functionality applies. Gross-Up Cap Amount indicates the cap on the total Facility Available Commitment of the Lenders for whom the "Gross-Up" method of Withholding Tax is applicable. The value specified in this field is in the Deal currency, by default. The default value is No Limit. Any positive amount can be specified. If this is left blank, Loan IQ considers the "Gross-Up Cap Amount" as "No Limit". Gross-Up Cap Amount is enterable and modifiable and can be changed by any user who has "Update" authority for the Deal notebook. Such changes are allowed regardless of the status of the Deal. **Note:** In case of Deals, which pre-exist when the license for this enhancement is turned on, all the functionality defined in this enhancement is available when the license for this enhancement is turned on. All the new fields defined in this enhancement are available in pre-existing Deals, with their respective default values. The Withholding Tax Rate Schedule should not have any rows and the Withholding Tax rate should be considered as zero. If the license for this enhancement is turned off, the Withholding Tax Rate for pre-existing Deals will default to the Withholding Tax Rate, which pre-existed prior to turning on the license for this enhancement.
Gross-Up Cap Utilized Amount	Optional	Button	Available in a general release TBD and patched to Release 6.0.10.05, the following separately licensed Withholding Tax for Capital Gains functionality applies.

			Brings up the Gross-Up Cap Utilized Amount Details window. The Gross-Up Cap Utilized Amount Details window displays the Lender Name and Lender's Facility Available Commitment which add up to the "Gross-Up Cap Utilized Amount". This window is display only and cannot be updated. **Note:** In case of Deals, which pre-exist when the license for this enhancement is turned on, all the functionality defined in this enhancement is available when the license for this enhancement is turned on. All the new fields defined in this enhancement are available in pre-existing Deals, with their respective default values. The Withholding Tax Rate Schedule should not have any rows and the Withholding Tax rate should be considered as zero. If the license for this enhancement is turned off, the Withholding Tax Rate for pre-existing Deals will default to the Withholding Tax Rate, which pre-existed prior to turning on the license for this enhancement. **Note:** The Gross-Up Cap Utilized Amount button and Gross-Up Cap Utilized Amount Details window are accessible to all users with Update or Inquiry authority to the Deal notebook.
Gross-Up Cap Utilized Amount	Conditional	Display	Available in a general release TBD and patched to Release 6.0.10.05, the following separately licensed Withholding Tax for Capital Gains functionality applies. Gross-Up Cap Utilized Amount indicates the Cap amount which has already been utilized by the Lenders in the Deal, who are under the "Gross-Up" method of Withholding Tax. The value derived is in the currency of the Deal, by default. Gross-Up Cap Utilized Amount displays the sum of the Facility Available Commitment of Lenders who are under the "Gross-Up" method of Withholding Tax. The value displayed can never be greater than the value specified in the "Gross-Up Cap Amount" field. Whenever the value of the "Gross-Up" indicator, in the "Deal Servicing Group Details" window is successfully modified, the value of the "Gross-Up Cap Utilized Amount" is updated and displayed. The value of the new "Gross-Up Cap Utilized Amount" field is also updated and displayed in Loan IQ, whenever the Facility Available Commitment of the Lender is updated at the Deal level. Users can click the "Gross-Up Cap Utilized Amount" button, open the "Gross-Up Cap Utilized Amount Details", and display the Lender Name and Lender's Facility Available Commitment which add up to the "Gross-Up Cap Utilized Amount". **Note:** In case of Deals, which pre-exist when the

			license for this enhancement is turned on, all the functionality defined in this enhancement is available when the license for this enhancement is turned on. All the new fields defined in this enhancement are available in pre-existing Deals, with their respective default values. The Withholding Tax Rate Schedule should not have any rows and the Withholding Tax rate should be considered as zero. If the license for this enhancement is turned off, the Withholding Tax Rate for pre-existing Deals will default to the Withholding Tax Rate, which pre-existed prior to turning on the license for this enhancement.
FATCA Details			
Grandfathered	Optional	Checkbox (Indicator)	Available in Release 6.0.10.13.1 and 7.2.7.5, with separately licensed FATCA enhancement. Defaults according to the FATCA Customization Parameter values. Field is overridable. This field is also available in Deal Change Transaction. An Event is created if this field is modified.
Grandfathered Status Lost On	Optional	Date	Available in Release 6.0.10.13.1 and 7.2.7.5, with separately licensed FATCA enhancement. Users can use this field to indicate the date the Grandfathered Status was lost on. This field is also available in Deal Change Transaction. An Event is created if this field is modified.

Note: Host Bank Share Amount is composed of all Host Bank primaries plus all Host Bank buys.

Personnel Tab

Department is required to save a Host Bank deal or to pass **Verify Deal** validations.

Attribute	Req/Opt	Size/Format	Rules
Early Discussion Deal	Conditional	Indicator (check Box)	Applicable only to Host Bank Deal and defaults to *Yes* (checked) on initial setup. Only personnel with access to the indicator (authorized in User Profile) can change it to *No* (unchecked) and back to *Yes* (checked) prior to deal closing. Upon closing the Host Bank deal, the Early Discussion Indicator is turned off by the system, and cannot be modified. If Host Bank Deal is Restricted, Early Discussion Deal setting has no impact upon access. If Host Bank Deal is Unrestricted, but Early Discussion Deal is still set to *Yes*, salespersons, traders and asset managers will not be able to see the deal. Note: The **Early Discussion** indicator is not applicable to Non-Host Bank Deals, which are created as closed.
Department	Required	List Box of	A valid Department is required to save a deal or to

		User's Departments	pass **Verify Deal** validations. Selection list presents Departments defined in the User Profile. No default. **Note:** Beginning with the separately licensed enhancement in Release 6.0.07.08 and forward, Expense codes can be associated with Departments. Only one association can be created between a given Expense Code and Department. If associations exist, they flow down to the appropriate Deal Notebook. If only one Expense code association exists for the department that is the default. The Expense code will only default if there is no current value. Existing expense codes will not be overwritten when changing to a department with a different expense code association. If the Expense code is selected first and an association exists the associated department displays in the department field. This default is overridable. Departments that have multiple expense codes can have multiple associations created. If a department has more than one expense code associated with it, a pop-up selection window displays when the Expense Code button is clicked. The Expense Code value is overridable with all active expense codes.
Department Subtype	Required	List Box of User's Department Subtypes	This is separately licensed functionality. If you are a licensed client, please refer to the *Misys Loan IQ Department Subtype Setup & User Guide* for further information. If you are not a licensed client and would like further information, please contact your Misys Loan IQ Account Manager. Select from the list of active Department Subtype codes. The Subtypes available for selection are those active Department Subtypes that have been associated with the Department selected as defined in the Department Subtype table in Table Maintenance.

Expense Code	Optional	Button or 15 char	No default. Required for Deal Close and cannot be deleted after deal close. Button brings up window asking user to choose Expense Code from either Borrower Expense Codes or All Expense Codes. If *Borrower Expense Codes* is chosen, the selection list is populated by just Expense Code(s) of the Borrower(s) selected for the deal. **Borrower** button is disabled if no Borrower has been selected for the deal. If *All Expense Codes* is chosen, the full universe of valid Expense Codes is presented for selection. Note: User may optionally enter a valid 15-character Expense Code directly (rather than choosing the button and then selecting from the list presented). **Note:** Beginning with the separately licensed enhancement in Release 6.0.07.08 and forward, Expense Codes can be associated with Departments. Only one association can be created between a given Expense Code and Department. If associations exist, they flow down to the appropriate Deal Notebook. If only one Expense code association exists for the department that is the default. The Expense code will only default if there is no current value. Existing expense codes will not be overwritten when changing to a department with a different expense code association. If the Expense code is selected first and an association exists the associated department displays in the department field. This default is overridable. Departments that have multiple expense codes can have multiple associations created. If a department has more than one expense code associated with it, a pop-up selection window displays when the Expense Code button is clicked. The Expense Code value is overridable with all active expense codes. **Note:** As per the **Expense and Branch Code Association** enhancement, available with Release 6.0.08.08, the following separately licensed enhancement applies:

			The Expense Code button displays only valid Expense Codes for the Deal Branch. If the Deal Branch is changed, Loan IQ issues a warning message that the expense code in the Deal Personnel page is now invalid and manual correction of the expense code is required.
Sales Groups	Optional	Table: Sales Group	No default. Select one or more values from list of (active) codes. First Sales Group selected will be designated as the primary sales group. If more than one Sales Group is selected, user may change the primary sales group designation. Distressed Sales Groups may not be assigned to Host Bank Deals unless deal status is *Closed*.
Deal Personnel	Optional	Button	Brings up *Deal Personnel* window allowing user to assign personnel to this deal. All Host Bank deals are initially set up as Restricted, and require an Access List of personnel able to view/update the Restricted Deal. When the deal is unrestricted, individual Deal Personnel Assignments may be made. All Non-Host Bank Deals are set up as Unrestricted Closed Deals, and do not require an Access List.
Originator	Optional	User ID	May define any valid Loan IQ User ID as the Originator of the deal. Note: When deal personnel are set, if a user id with a Bank Business Area of ORIG is added, that user id will be assigned as a deal originator as long as the role is blank. Once a value is set for a role, updates to deal personnel will not change the existing value for that role.
Deal Administrator	Optional	User ID	May define any valid Loan IQ User ID as the Deal Administrator of this deal. Note: When deal personnel are set, if a user id with a job function code of DA is added, that user id will be assigned as a deal administrator as long as the role is blank. Once a value is set for a role, updates to deal personnel will not change the existing value for that role.
Relationship Manager	Optional	User ID	May define any valid Loan IQ User ID as the Relationship Manager for this deal. Note: If Originator, Deal Administrator or Relationship Manager fields are blank when the first Originator, Deal Administrator and/or Relationship Manager is added to the Deal Team, fields will be automatically populated accordingly. However, subsequent changes to the Deal Team will not affect these three fields, and user can modify the fields at any time.
Deal Access (Unrestricted/ Restricted)	System Generated	Indicator	Valid values (mutually exclusive) are Unrestricted and Restricted. Host Bank Deals default to Restricted on initial setup. Only the Access Manager(s) and the Loan IQ Security Manager can change a Restricted Host Bank Deal to Unrestricted (using the **Unrestrict Deal** option) prior to closing; upon closing, the Host Bank

			deal is automatically Unrestricted and cannot be changed back to Restricted.

Deal Personnel

Attribute	Req/Opt	Size/Format	Rules
If Unrestricted: May make Deal Personnel Assignments:			
Personnel/Security Access	Optional	Button	When a restricted Host Bank Deal becomes unrestricted (normally upon closing), all personnel on the deal's Access List will remain as Deal Personnel assignments. Non Host Bank Deals are created as Unrestricted, and the person creating the deal will automatically be added to the Deal's Personnel list. Additional deal personnel assignments may be made and/or removed. **Note:** Only Active, Notification Only, and Inquiry users may be selected as deal personnel. Inactive and Admin users may not be selected as deal personnel. Once unrestricted, a deal may never be restricted again.
If Restricted: Create Deal Access List:			
Personnel/Security Access	Required	Button	The person setting up the Pending Host Bank Deal automatically becomes the Access Manager and is added to the Access List. Only a restricted deal's Access Manager and the Loan IQ Security Manager can add or delete personnel to/from the Deal Access List. If a restricted customer is associated with the new deal, the customer's Access List becomes the starting point for the deal's Access List. However, selection of deal personnel is not limited to those assigned to the restricted customer; personnel present on the customer's Access List may be removed from the deal's Access List, and personnel not present on the customer's Access List may be added. **Note:** Users with Active, Notification Only, and Inquiry access may be selected as deal personnel. Inactive and Admin users may not be selected as deal personnel.
Make Manager	Optional	Button	Only a Deal Access Manager may add the designation of Access Manager to other users on the deal's Access List. Notes: The **Make Manager** button is grayed out on Unrestricted Deals. When the Deal Access Manager in a Restricted Deal is changed, an Internal Notification (*Change Access Manager in a Restricted Deal*) is sent to the Distribution List defined in Notifications Matrix, informing them that the access manager has been

			changed. Users with Active, Notification Only, and Inquiry access may be selected as deal personnel. Inactive and Admin users may not be selected as deal personnel.
If Restricted: Create Deal Access List:			
Remove Manager	Optional	Button	Only a Deal Access Manager may remove the designation of Access Manager from other users on the deal's Access List. (Personnel removed as Access Managers remain as members of the Access List). Notes: **The Remove Manager** button is grayed out on Unrestricted Deals. If an Access Manger is removed due to a Restricted Deal being changed to an Unrestricted Deal, Notifications are no longer sent.
Security Agent	Optional	Button	Available in Release TBD and patched to Release 7.1, the following separately licensed Advanced Collateral functionality applies. Clicking this button opens the This button opens the Customer Select window which enables a user to select a Security Agent for the Deal Only one Security Agent can be defined for a deal. Once defined at the Deal level, the value for Security Agent flows down to the Collateral Agreement and the user cannot change the value in the Collateral Agreement Notebook.

Risk/Regulatory Tab

Field Name	Req/Opt	Size	Rules
Internal Risk Ratings List Box	System Generated	List Box	Risk Ratings defined for this deal are listed by name, along with their Rating Value, Effective and Expiration Dates and Percent. Listed Internal Risk Ratings may be selected for update. User may also add a new rating or delete an existing one. Duplicate risk ratings for the same risk rating type are allowed. Note: An event is created on the Events tab every time the Risk Rating is set or changed.
Community Reinvestment Act	Required	Indicator (check box)	Defaults to *No* (deal is not a CRA Deal). User may override to *Yes*.
HLT	Required	Indicator (check box)	Defaults to *No* (deal is not HLT). Cannot be updated manually. User must change indicator via the **Change HLT** option on the **Options** menu, or through the *History* window.
History (HLT)	Conditional	Button	Brings up the *HLT History* window. Displays history of HLT indicator (true or false), as well as the start and end date of each item. Gaps between start and end dates are not allowed. Print and Export buttons are provided. The HLT indicator can be checked or unchecked via the **Change HLT**

			Status option on the **Options** menu, the insert button or by drilling down on a listed HLT history item. Notes: Start Date for HLT History changes cannot be greater than current date and cannot be less than the earlier of Deal Close Effective Date and Deal Creation Effective Date. Start and End Dates may no longer be changed for an existing history item. Changing the HLT History creates an as-of trigger (and a re-accrual) back to the Start Date of the history entry that changed. An event is created on the Events tab every time the HLT indicator is changed.
Origination Cost Eligibility	Conditional	Drop-down list	Available in 7.4.3.0 and later, user can override the Origination costs at Deal level even when the Portfolio of Facility under the deal is eligible. The field is available to user when the following criteria are met: - The Origination Costs Deal Level Override (OCDLO) System Parameter is “On” for the Branch of the Deal. - Deal has Facility Portfolio position with the Portfolio eligible for Origination Cost. **Note**: When the above criteria is met and drop-down list is available, user must select a value from the list. The following are the valid options for the drop-down: - Eligible - Not Eligible The origination costs are applied to one or more Facilities only when selected value is **Eligible**.
Shared National Credit	Required	Indicator (check box)	Defaults to *No*, deal is not eligible for SNC reporting. User may override to *Yes*. Available in Release 7.2.6 the separately licensed SNC Auto Population functionality applies. This functionality disables the Shared National Credit (SNC) check box indicator. The check box functionality is replaced by a new SNC Reporting drop-down on the Facilities notebook.
Reference ID	Conditional	1 to 8 digits	If SNC indicator is *Yes*, user may enter a 1 to 8-digit ID number (which must be unique within bank). If SNC indicator is *No*, Reference ID is not applicable. Available in Release 7.2.6 the separately licensed SNC Auto Population functionality applies. This functionality disables the Reference ID text box. The text box functionality is replaced by a new SNC Reporting drop-down on the Facilities notebook.

Borrower Cashflow Counterparties	Optional	Button	Defines the Borrower Cashflow Counterparties restricting splitting of cashflows across customers added to this list.
Stabilization Agent	Optional	Button	This is separately licensed functionality that allows users to add a Stabilization Agent to the Deal. Licensed clients should refer to the *Misys Loan IQ Interest Stabilization – User Guide* document for further information. If you are not a licensed client and would like more information about the **Interest Stabilization** functionality, contact your Misys Loan IQ Account Manager. The Stabilization Agent button allows selection of a Stabilization Agent for the Deal, Servicing Group for the Stabilization Agent, Reference Number, To CCY (Currency) and From CCY (Currency) and Preferred Remittance Instructions, via Stabilization Details window.
Exporters/Sponsors	Optional	Button	An Exporter/Sponsors button allows the selection of an Exporter/Sponsors for the deal, via the Exporters/Sponsors Details window. Multiple Exporters/Sponsors may be defined. If any Exporters/Sponsors have been defined for the deal, button will be blue.
Guarantees List Box	System Generated	List Box	Guarantees defined for this deal are listed by Guarantor Name, Type, Priority, Secured, Effective Date, Expiry Date, Global Guarantee Amount, Global Guarantee Percentage and Relationship. Listed Guarantees may be selected for update. User may also add a new Guarantee or delete an existing one. A deal's global commitment amount must be greater than zero before adding a guarantee.
VAT On Main Service	Conditional	Text Indicator	Available in Release 7.3.1, the separately licensed **VAT (Value Added Tax) Assessments Due from Borrower on Interest and Fees Payments** enhancement, provides the functionality in Loan IQ to selectively apply and enable VAT liability at Deal level to automatically assess, calculate, bill and account for VAT on Main Services (loan interest) and Sub Services (Fee payments). The identification of whether VAT is charged on the Deal Main Service also works with VAT identification for fees to determine the fee types in a Deal are assessed for VAT. For new Deals, there should be no default determination and this should be blank. In order to send a deal to approval, the deal must be identified as either **Yes** or **No** for VAT assessment on Deal Main Service. For migrated Deals, the default setting should be **No.** When the Main Service option is set to **Yes** at the Deal level, then the interest charged on all interest bearing loans under the Deal will have VAT applied, without exception. When the Main Service option is set to **No** at the Deal level, then the interest charged on interest bearing loans under the Deal will have no VAT

			applied, without exception. Whether or not VAT is also to be applied to the 'Sub-Services' – fees - within the deal will be controlled by a further setting for each Fee Type in Table Maintenance. **Note**: VAT will not be calculated for any outward payments made by the Host Bank to a Borrower who does not belong to the same country as that of the Host Bank or Agent. Borrower country is validated with the Borrower's Legal Address. <u>Past Due Item</u> Given an item (interest) goes past due, when the past due item is created for that item, then the VAT applicable to that item is included as part of the total amount considered past due such that penalty interest also accrues on the VAT and a separate VAT item isn't created. Given a past due item that includes VAT, when a payment is applied to that past due item, then the payment also applies pro rata to the VAT portion of the past due. VAT is also apportioned on the past due item. If a lender has VAT apportioned, and the Borrower has not paid, then the lender share in the past due item includes VAT, and the past due penalty accrual would be distributed to the lender.

Modify	Optional	Button	At Deal Level, the Modify button is active only in New Deals, when the VAT on Main Service option is not set. **Note**: By default, the VAT on Main Service Indicator is blank in a new deal. **VAT Status** Both the VAT on Main Service option and the Fee Type VAT option can be changed/reset at any time by the user after a payment has been created using the Deal Change Transaction option. User is presented with a warning message indicating a change in status, with the option to **Continue** or **Cancel**. A change in VAT status must go through levels of approval. A change must generate an event in Loan IQ and a history of all such events is maintained. Any change in VAT status setting of Main Service after a deal is closed, is subject to approval considering any such change operation as a Deal Change Transaction. Available in Release 7.3.1.16 with the **VAT Assessments Due from Borrower on Interest and Fees** enhancement, a user can modify the VAT status to be applicable to the fees and interest in an existing deal, based on the credit agreement with the borrower. After the user has modified the VAT status, Under this deal, when the user creates an outstanding under this deal creates a new interest payment for an outstanding, and then the modified status of the VAT is considered during the transaction. In case a pending transaction exists in the deal that already has cashflows generated and the user has modified the VAT status at the deal level, When the user processes the pending transaction under this deal, the old status of the VAT is considered. When a user creates the cashflows and releases the transaction, and either of the Main Service, VAT Rate

			or Fee Type VAT changes, a dialog CHOOSE A VAT SET OF V ALUES is displayed. The user has the option to select any of the two values – Original and Current. **Original**: When the user selects this option, the transaction proceeds with the Old VAT information that was set while creating cashflows. **Current**: When the user selects this option, the transaction proceeds with the New VAT information that was created during the payment approval or release. The following validations are applicable to the Original and Current values: In case, the user has defined some VAT at the system level, but during payment VAT is not applied, If the Original VAT amount is 0, the Original option displays the values: Rate 0%, Main service status: nil, VAT Fee status: nil. if there is an interest payment, the VAT Fee Status is nil. the Current option takes up the values: Rate <applicable value>, Main service status : as defined in deal notebook, VAT Fee status: < applicable value>. If the Main Service Status is no, then unless the VAT Fee Status is Always, Rate displayed is 0%. **Note**: The values for Rate, Main service status and VAT Fee status (in the dialog box) receives the value from Country code table, Deal notebook and Fee Type code table respectively. For more details on working with VAT settings and pending payment transactions, refer *Misys Fusion Loan IQ Online Help > Deal > VAT Assessments Due from Borrowers on Interest and Fee Payments > Working with VAT Settings and Pending Payment Transactions section*.
History (VAT on Main Service)	Optional	Button	Provides a historical record of the VAT option change events made by a user since the creation of a Deal or a migrated Deal.
Consortium Type Contract	Optional	Drop-down list	Available in Release 7.3.1.2 with the **VAT Assessments Due from Borrower on Interest and Fees** enhancement, the following applies: Select External or Internal. Defaults to contract type, External. If External is selected, then that Deal's VAT on Main Service is set to 'No' and no VAT for interest will be calculated, no VAT on interest is apportioned to lenders. If Internal is selected, then if the Deal's Vat on Main Service is set to 'No,' no VAT for interest will be calculated, and no VAT on interest is apportioned to lenders.

Deal Internal Risk Rating Details

Field Name	Req/Opt	Size	Rules
Internal Risk Rating Type	Required	Table: Internal Risk Rating Type	Select one Internal Risk Rating Type from list of (active) values. No default. Note: Rating Type is not updateable on existing ratings.
Internal Risk Rating Value	Required	Table: Internal Risk Rating Value or free-form entry	The system will determine whether the rating value is selected from (active) values in the Internal Risk Rating Value Table, or is entered (free-form) by the user. If selected, choose one rating value from the list of (active) codes. No Default. If entered by user, no edit checks apply.
Internal Risk Rating Effective Date	Required	Date	Date Internal Risk Rating value was last changed. Defaults to current date.
Internal Risk Rating Expiration Date	Optional	Date	Date Internal Risk Rating values will expire. If entered, cannot be less than Rating's effective date.
Internal Risk Rating Percent	Required	Percent	Defaults to 100%. If multiple risk ratings are defined, the total of all risk rating percentages may exceed 100%.

Stabilization Agent Details

This is separately licensed functionality that allows users to add a Stabilization Agent to the Deal. Licensed clients should refer to the *Misys Loan IQ Interest Stabilization –User Guide* document for further information. If you are not a licensed client and would like more information about the **Interest Stabilization** functionality, contact your Misys Loan IQ Account Manager.

Field Name	Req/Opt	Size	Rules
Stabilization Agent	Required	Button	Select from list of customers with Guarantor Profile.
Servicing Group	Optional	Button	Brings up Servicing Group associated with the customer set up as Stabilization Agent for user's selection. If only one active Servicing Group exists for that customer set up as Stabilization Agent, it will default. If more than one Servicing Group exists, then a Servicing Group must be selected from the list of all available active Guarantor Servicing Groups for the customer.
Reference Number	Optional (at Deal/Facility Level)	20 Alphanumeric	Free-form user entry.
To CCY (Cash "To" Stabilization Agent Currency)	Required	List Box	Select any active value in the list of Currency table which will be used for all Cashflows that send funds TO the Stabilization Agent from the Admin Agent. Users have the option to select 'Use Loan CCY" indicator or make a selection from the list box. **Note:** The Admin Agent will send the entire bank group amount to the Exporter in the currency specified but always receives/pays Exporter Interest funds to/from the Bank Group Lenders in the Currency of the Loan. When the Cashflows

			are converted it will be done at the SPOT Rate in place at the time of generating the Cashflows.
Use Loan CCY	Optional	Indicator (Check box)	No default. Select to allow the Loan Currency to be used for all Cashflows TO the Stabilization Agent from the Admin Agent.
From CCY (Cash "From" Stabilization Agent Currency)	Required	List Box	Select any active value in the list of Currency table which will be used for all Cashflows FROM the Stabilization Agent to the Admin Agent. Users have the option to select 'Use Loan CCY" indicator or make a selection from the list box. **Note:** the Admin Agent receives the entire Bank Group Exporter Interest amount from the Exporter in the currency specified but always pays/receives Exporter Interest to/from the Bank Group Lenders in the Currency of the Loan. When the Cashflows are converted it will be done at the SPOT Rate in place at the time of generating the Cashflows.
Use Loan CCY	Optional	Indicator (Check box)	No default. Select to allow the Loan Currency to be used for all Cashflows FROM the Stabilization Agent to the Admin Agent.
Preferred Remittance Instructions	Optional	Button	Preferred Remittance Instructions can be set up as per normal Loan IQ rules for setting up Preferred Remittance Instructions for a Servicing Group. Note: Where the same Exporter is used for different Facilities under the same Deal and different preferred Remittance Instructions (e.g. Euro on Facility 1 and USD on Facility 2) are needed for each Facility then two separate Servicing Groups should be created. The USD Servicing Group should be attached to one Facility and the Euro Servicing Group should be attached to the other Facility.

Deal Guarantor Details

Guarantees are **optional**. If one is defined, required fields must be entered in order to **save.**

Available in a general release TBD and patched to Release 6.0.10.05, the following separately licensed Allocation of Deal Level Guarantees functionality applies.

When a 'Guarantee' is defined at the Deal Level, users have the ability to mark/select only specific facilities to be assigned against the Deal level 'Guarantee'. A new screen labeled "Facilities" displays selected facilities to be applied against the Deal level guarantee. The 'Facilities Selection List' screen allows a user to select one or more facilities available for the deal on which the 'Guarantee' applies. When a user selects one or more Facilities on which the 'Guarantee' applies.

The amount of the guarantee applied against each selected facility will always be the Global Guarantee Amount.

'The Deal Global amount must be greater than zero for a 'Guarantee to be applied'.

The existing validations wherein the 'Global Guarantor amount defined is 10 times less than the Deal global current amount holds good.

If the Guarantee at the deal level is specified for selected Facilities defined via the 'Facilities' screen, the guarantee applies only to the specified facilities, provided there are no separate facilities defined at the Facility level.

If a guarantee is defined at the facility level then the guarantee defined at the deal level will be overridden by the Facility Guarantee and there will be no changes to this functionality.

Note: With the installation of this functionality there will no conversion to the exiting 'Guarantees' defined in the Deal prior to this enhancement.

Attribute	Req/Opt	Size/Format	Rules
Guarantor Name	Required	List of Guarantors	Select from list of customers with guarantor profile and a status defined as "Active" (Release 6.0 and forward). A customer may be used as a guarantor multiple times for different Guarantee Types or the same Guarantee Types.
Servicing Group	Optional	Button	Brings up Servicing Group associated with Guarantor for user's selection. If only one active Servicing Group exists for that Guarantor, it will default.
Guarantor Ref. Number	Optional	15 Char	Free-form user entry.
Currency	Required	Drop-down list	Defaults to the Currency of the Deal but user may change to any available currency that is active in the Currency table. If the Currency of the Guarantor is different from the Deal Currency, then the **% of Global** will be calculated using the Spot Rate defined in the Treasury for the Funding Desk associated with the Branch of the Deal. If the **% of Global** is entered first, then the **Global Guarantor Amount** will be translated into the currency of the Guarantor using the Spot Rate. If the Spot Rate for that currency is not found in Treasury, the system will use the F/X rate of *1.* This **Currency** field is used for providing information for reporting purposes.
Relationship	Optional	40 char	Free-form user entry.
Guarantee Type	Required	Table: Guarantee Type	Select one value from the list of (active) codes. No default.
Priority	Required	1 digit	Select one value from the Priority List (Valid values are 1 to 9). Defaults to 1.
Secured	Required	Indicator (Check box)	Defaults to *No* (not secured). User can override to *Yes* (secured).
Counter Indemnity Indicator	Optional	Indicator (Check box)	Defaults to *No* (identifies whether the guarantor is counter-indemnity). User can override to *Yes*.
Counter Indemnity Ref. Number	Optional	15 Char	Free-form user entry.
Beneficiaries	Optional	Button	Must be lenders in the deal. Lenders cannot be added until their circles are complete. If any Beneficiaries have been defined for the deal, button will be blue.
Facilities	Optional	Button	Available in a general release TBD and patched to Release 6.0.10.05, the following separately licensed Allocation of Deal Level Guarantees functionality applies.

			Opens the Facilities window.
Risk Basis	Required	Indicator	Defaults to Fixed. User can override to Percentage. If Fixed is selected, then as the facility amount changes, the % of Global will change but the Global Guarantee Amount remains fixed. If percentage is selected, then as the deal amount changes, the Global Guarantee Amount will change proportionately but the % of Global remains fixed.
Whether a guarantee type requires both Political and Commercial risks is determined by parameters, which are set for each Guarantee Type in the Table Maintenance. Commercial Risk			
Effective Date	Optional	Date	No default. Validated against Deal Holiday Calendar. Cannot be less than the Guarantee Maturity Date.
Expiry Date	Optional	Date	No default. Must be greater than Guarantee Effective Date. Validated against Holiday Calendar.
Global Guarantee Amount	Optional	System Amount Standard	If Global Guarantee Amount is entered, % of Global is derived.
% of Global	Optional	Percent	If % of Global is entered, Global Guarantee Amount is derived.
Ceiling	Optional	System Amount Standard	Defaults to zero. User may optionally enter an amount.
Political Risk			
Effective Date	Optional	Date	No default. Validated against Deal Holiday Calendar. Cannot be less than the Guarantee Maturity Date.
Expiry Date	Optional	Date	No default. Must be greater than Guarantee Effective Date. Validated against Holiday Calendar.
Global Guarantee Amount	Conditional	System Amount Standard	Required to save unless % of Global is entered. If Global Guarantee Amount is entered, % of Global is derived.
% of Global	Conditional	Percent	Required to save unless Global Guarantee Amount is entered. If % of Global is entered, Global Guarantee Amount is derived.
Ceiling	Optional	System Amount Standard	Defaults to zero. User may optionally enter an amount.
Additional Fields	Conditional Template	Button	Opens the *Additional Fields for Deal Guarantor Details* window. Displays the fields set up in the **Additional Field Templates** table in **Table Maintenance**. Fields marked in blue are required fields. This function is separately licensed. For further details please refer to the Additional Fields Template Business User Guide document. If you are not a licensed client and would like more information about the Guarantor Details Additional Fields functionality, please contact

			your Misys Loan IQ Account Manager.
GL Entries	Optional	Button	Available in release TBD and patched to Release 6.0.10.05 the following separately licensed Accounting of Guarantees Received functionality applies. Opens the GL Entries for COLLATERAL ACCOUNT window listing all the GL entries for the account. Note: The GL entries are owned by the event created due to the transaction which caused collateral valuation change or Global Ceiling amount change in the Guarantor window. For more information please see the *Misys Loan IQ Collateral Edit & Validation Rules* document.

Facilities Window

Available in a general release TBD and patched to Release 6.0.10.05, the following separately licensed Allocation of Deal Level Guarantees functionality applies.

The Facilities window is provided for a user to select one or more specific facilities to be assigned against a 'Guarantee' defined in the Deal Notebook. The window is made available from the Deal Guarantor Details window, new Facilities button.

Note: If a user navigates to the 'Facilities Selection List' window and exits without marking/specifying any facility against the guarantee, upon selecting the 'OK' button on the 'Deal Guarantors Details' screen a warning message is displayed:

''No facilities have been specified. The guarantee will be considered to apply to all facilities in the deal.'

The guarantee then defined applies on all the available facilities of the Deal, provided there are no separate guarantees defined at the facility level.

Attribute	Req/Opt	Size/Format	Rules
Name	Optional	System Generated	Displays all the selected facilities for the Facilities Selection List window.
Status	Optional	System Generated	Displays the current status for the appropriate facilities.
OK	Optional	Button	Allows a user to update if there are any changes which include any additional selection of facilities from the Facilities Selection List Screen but not save the changes applied to the Facilities screen but return to the Deal Guarantor Details screen. **Note:** The selected facilities or any changes to the Facilities screen will not be saved until the OK button on the Deal Guarantor Details screen is selected. If no specific facilities are selected from the Facilities Selection List to be applied on the Guarantee and the OK button on the Deal Guarantor Details screen is selected. A warning message should be displayed **'No Facilities have been specified. The guarantee will be considered to apply to all facilities in the Deal'** indicating that no specific facility or facilities have been selected and the Guarantee applies to all the facility available in the Deal.

Cancel	Optional	Button	Closes the Facilities window. Exit without updating any changes applied to the Facilities Selection List or the Facilities window and return to the Deal Guarantor Details window.
Add	Optional	Button	Upon selecting the **Add** button a new pop-up screen labeled Facilities Selection List is displayed with all the available facilities for the Deal along with their current status.
Remove	Optional	Button	Upon highlighting a facility or facilities from the available list of facilities in the in the Facilities window and selecting the Remove button a message is displayed asking the user 'Do you really want to delete this Facility?' Upon confirmation the facility is deleted.

Facilities Selection List Window

Available in a general release TBD and patched to Release 6.0.10.05, the following separately licensed Allocation of Deal Level Guarantees functionality applies.

This window is made available from the Facilities window, Add button.

Notes:

If no facilities are specified for a deal guarantee, the guarantee is considered to apply to all the facilities in the deal.

If the system parameter, DCTRQ - Deal Change Transaction Required, is enabled and *Deal Guarantors* is part of the Deal Change Field Protection Association Table the user is able to make any changes to the Deal Guarantee via the Deal Change Transaction only.

If a user navigates to the Facilities Selection List window and exits without marking/specifying any facility against the guarantee, upon selecting the OK button on the Deal Guarantors Details screen a warning message is displayed:

''No facilities have been specified. The guarantee will be considered to apply to all facilities in the deal.'

The guarantee then defined applies on all the available facilities of the Deal, provided there are no separate guarantees defined at the facility level.

Attribute	Req/Opt	Size/Format	Rules
Name	Optional	System Generated	Users are able to select Facility/Facilities by clicking on the facility name and highlight the row from available list to indicate the guarantee applies. Users are able to multi-select using the control key and highlighting the rows. If all the available facilities for the deal have already been selected and there are no additional facilities available for selection, if users click the Add button then an error message is displayed 'There are no additional facilities in the Deal'. When a facility has been selected only then is it displayed in the 'Facilities, screen along with the facility status. When a facility is selected from the Available list and displayed in the Facilities Selection List it is then no longer available for selection in the Facilities Selection List.

Status	Optional	System Generated	Displays the current status for the appropriate facilities.
OK	Optional	Button	Upon clicking OK the selected facility is displayed on the Facilities screen but not saved. **Note:** The selected facilities or any changes to the Facilities Selection List are not saved until the OK button on the Deal Guarantor Details screen is selected.
Cancel	Optional	Button	Upon selecting the Cancel button if any facility/facilities were selected, it is not saved. The Facility Selection List screen closes and returns to the Facilities screen.
Select All	Optional	Button	Upon clicking the button Select All, all the facilities displayed in the list are selected
Deselect All	Optional	Button	Upon selecting the Deselect All, all the selected facilities highlighted are deselected.

Beneficiaries

Attribute	Req/Opt	Size/Format	Rules
Beneficiaries	Optional	List Box	Displays Beneficiaries defined for the Guarantor. Listed by Lender Names.
Add	Optional	Button	Allows addition of Beneficiaries. User must select from the list of customers that are lenders in the deal.
Delete	Optional	Button	Deletes Beneficiaries. Any Beneficiary can be deleted.

Deal Exporters/Sponsor List

Attribute	Req/Opt	Size/Format	Rules
Exporters/Sponsors	Required	List Box	Displays all Exporters/Sponsors defined for this deal. Exporters/Sponsors name, Type, Effective and Expiry Dates, Exporter Interest indicator and Percentage of Global. Drilling down on an Exporter/Sponsor will allow the details to be modified.
Interest Pay/Rec Details…	Optional	Button	This is separately licensed functionality. Licensed clients should refer to the *Misys Loan IQ Interest Stabilization Online Help* for further information. If you are not a licensed client and would like more information about the **Interest Stabilization** functionality, contact your Misys Loan IQ Account Manager. Displays the *Interest Payer/Receiver Details* window. The attributes are listed in **Interest Payer/Receiver Details** section as described below.
Add	Optional	Button	Allows addition of Exporters/Sponsors. User must select from the list of customers with Guarantor profiles and is then presented with window where the required Exporter/Sponsor information is completed.

Delete	Optional	Button	Deletes Exporter/Sponsor. Any Exporter/Sponsor can be deleted.

Interest Payer/Receiver Details

This is separately licensed functionality that allows users to add a Stabilization Agent to the Deal. Licensed clients should refer to the *Misys Loan IQ Interest Stabilization Online Help* for further information. If you are not a licensed client and would like more information about the **Interest Stabilization** functionality, contact your Misys Loan IQ Account Manager.

Attribute	Req/Opt	Size/Format	Rules
Exporter/Sponsor	Required	System Generated	Displays name of Exporter/Sponsor.
Servicing Group	Optional	System Generated	Servicing Group may be added. If user wishes the ability to include Exporter/Sponsor on any Notices, Servicing Group must be added. If only one active Servicing Group exists for that Guarantor, it will default.
Servicing Group Location	Optional	System Generated	Servicing Group location defaults.
Preferred Remittance Instructions	Optional	Button	Preferred Remittance Instructions can be set up as per normal Loan IQ rules for setting up Preferred Remittance Instructions for a Servicing Group. Note: Where the same Exporter is used for different Facilities under the same Deal and different preferred Remittance Instructions (e.g. Euro on Facility 1 and USD on Facility 2) are needed for each Facility then two separate Servicing Groups should be created. The USD Servicing Group should be attached to one Facility and the Euro Servicing Group should be attached to the other Facility.
Delete	Optional	Button	Deletes Interest Payer/Receiver Details.

Deal Exporter/Sponsor Details

Attribute	Req/Opt	Size/Format	Rules
Exporter/Sponsor	Required	System Generated	Displays name of Exporter/Sponsor.
Servicing Group	Optional	Button	Servicing Group may be added. If user wishes the ability to include Exporter/Sponsor on any Notices, Servicing Group must be added. If only one active Servicing Group exists for that Guarantor, it will default.
Exporter/Sponsor Type	Required	Table: Exporter Sponsor Type	Choose from list of valid (active) values.
Effective	Required	Date	The Effective Date of the Exporter/Sponsor. Must be prior to the Expiry Date.
Expiry	Required	Date	The Expiry Date of the Exporter/Sponsor.
Percent of Global	Required	15 Characters	Must be below 1000% for each Exporter/Sponsor entry. In many instances, a Guarantor will

			guarantee over 100% of the Deal Global amount.
Comment	Optional	Button	Brings up the standard *Comments* window. Button will be blue if comment exists.

Workflow Tab

Displays the Workflow Item Description and any applicable Target Date for all workflow items associated with this Deal. User refers to this page to see "What Needs to be done Next."

Target Date - System creates Target Dates for all generated workflow items. For example, the Target Date for the *Send to Approval*, *Approve* and *Close* workflow items is set to the **Deal's Projected Close Date.**

Note: Can drill down to actually perform the workflow items, when in *Update* mode.

Details – After highlighting an item, displays the full text details of the workflow item.

User Defined Workflows

Beginning with Release 6.0.09.11 as per separately licensed enhancement, *User Defined Reminders,* a User Defined Workflows section is also available from the Workflow Tab. Clients with the User Defined Reminders license can create, modify and delete User Defined Reminders and complete the associated User Defined Workflow items in the Workflow tab.

Please refer to the *Misys Loan IQ User Defined Workflows/Reminders Setup & User Guide* for more information.

Credit Control

The Credit Control Approval functionality is separately licensed and is available in Release 6.0.08.02 (Patch) and 6.0.09.05 and later. Only the Credit Control Approver (CCA) can perform credit control approvals. This approves the selected transaction.

If you are licensed for Credit Control Approval functionality there is a *Credit Control Approval* workflow created before the deal can be closed.

Please refer to the *Misys Loan IQ Credit Control Approval Process Setup & User Guide* for more information.

Beginning in 6.0.10.05, to prevent over-utilization, the Credit Control Approval process includes a check of utilization of the parent sublimit, in addition to its subordinate sublimits, when new drawdowns and loan increases are created.

Clients must be licensed for Credit Control Approval to use this functionality.

Pending Tab

The Status, Description and Effective Date of all Pending Transactions associated with this deal are displayed. Drilling down on a selected transaction opens up the relevant Pending Transaction Notebook and user may view/update, cancel or release the transaction, as appropriate.

Other Products Tab

Attribute	Req/Opt	Size/Format	Rules
Other Products	Optional	256 char	Free form input by user. Can be modified at any time.
Equity Participation:			
Description	Optional	256 char	Free form text.

Amount	Conditional	System Amount Standard	Required if description is entered. Can be less than, equal to or greater than the deal global amount.
Currency	Conditional	Table: Currency	Required if description is entered. Will default to the currency of the branch of the user who created the deal, but user can override with any value from list of (active) currency codes.
Percent Share	Optional	Percentage	User defined. The percent of equity cannot exceed 100%.

Events Tab

Manually entered deal events are **optional**. If defined, required information is needed to **save**.

Attribute	Req/Opt	Size/Format	Rules
Event	Required	Table: Event Type	User selects Event Type for manually entered event from **Declare Deal Events** listing. No default.
Date and Time Stamp	System Generated	Date/Time	Not enterable. Populated by system to preserve date and time the event was created.
Effective Date	Required	Date	If event is entered, will default to current business date. User may override date for manually entered events and for some selected events created from deal actions. (See Deal – Options Menu).
Export Events	Optional	Button	Exports the list of events to a file.
Print Events	Optional	Button	Prints the list of events.
Zoom	Optional	Button	Brings up the Events Zoom window. Allows user to view all events, or filter events by type. User can print and export from the Zoom window.
Event Details			
User	Optional	Button	Not enterable. Displays User ID of person creating the event, and pressing the button displays the User ID, User Name, and User Alias.
Comment	Optional	256 char	Additional data may be displayed for certain system-generated events as defined on the events code table. System generated data cannot be modified by the user. Certain manually entered events accept comments when created, and may be modified later, as long as the comments are for the most recent event of a particular type.
Delete	Optional	Button	Allows user to delete any manually entered event: Deal in Pipeline Events Declare Deal Events Deal Died Events
Effective	Optional	Button	User can select *Effective* to change the Effective Date of the following Events: Deal in Pipeline (all events) Declare Event (all events) Deal Died Event (all events) Events associated with released transactions,

			which allows user to change their Effective Date Post-Release (Amendments, Commitment Increase, Share Adjustment, Paper Clip Payments.) Performing Status Change Events Approve Deal Deal Close Terminate Commitment Letter Received Note: Deal Close Date cannot be changed to any date later than the earliest Facility Effective Date or earlier than the agreement date.
Amendment #	Optional	5 char	If entered, must be a valid Amendment # for this deal.
Event Queue	Optional	Button	Available in Release 7.2 the following Enhancements to Event Management functionality applies. Introduced on Event tab. Select an event and click Event Queue. Brings up the Event Queue window displaying the list of Event Output records that resulted from the selected event.
G/L Entries	Conditional	Button	G/L entries that are attached to events must be accessed via the G/L Entries button. If an event is selected and it has G/L entries, the G/L Entries button will be displayed in the lower right hand side of the event details box. G/L entries will only be able to be seen via the G/L Entries button. The G/L Entries button is hidden unless an event that has Accounting is highlighted and either a Reclass has been performed or Performing Status has changed.

Note: Changing the Effective Date, either by drilling down on the Event or via the **Effective Date** button, does not create another event, but simply changes the Effective Date in the existing event. (Existing Event Comment is not disturbed). An optional comment may be entered when changing the Effective Date from the Deal Event Window.

Comments Tab

Comments are **optional**, but if entered, both the subject and comment text are required.

Beginning with Release 6.0.09.02 and forward, the Comments tab or Comment Icon (if using Explorer Mode) are highlighted whenever a comment exists. The comment tab highlight is removed, if the comment is deleted.

Attribute	Req/Opt	Size/Format	Rules
Add	Button	Optional	Adds a Comment
Comment Edit Window			
Created on:	System Generated	Date	System-assigned (entry date).
By:	System Generated	User Name	Identifies author of the comment
Modified on:	System Generated	Date	System assigned (modification date).

By:	System Generated	User Name	Identifies modifier of the comment. Only the original author and the Loan IQ Security Manager may change and/or delete an existing comment.
Subject	Required	40 char	User defined field - maximum length 40 alphanumeric characters.
Comment	Required	256 char	Free-form entry.
OK	Optional	Button	Saves the comment and exits the window.
Cancel	Optional	Button	Cancels changes made to comment.
Delete	Optional	Button	Deletes an existing comment subject to the restrictions above.
Print	Option	Button	Prints the comment.

Restrictions Tab

Attribute	Req/Opt	Size/Format	Rules
Include Collateral in Borrowing Base	Required	Indicator (check Box)	Beginning with Release 6.0.10.05 and forward, the following Linking Collateral to Limits and Calculation of Availability functionality applies: Defaults to *No* (unchecked). When this indicator is set to Yes (checked), any collateral account that has been linked to any possible limit, is considered when calculating the borrowing base value for the available to draw. In addition, the new global facility borrowing base value definition is changed to the total value of Facility Borrowing Base and New Borrowing Base linked to the facility. When the indicator is set to *No*, the collateral account that has been linked to any possible limit and the facility borrowing base are **not** considered when calculating the available to draw including the current facility borrowing base. An event is created when the indicator is changed and the event comment contains the old and new value of the indicator. Indicator change takes effect as of the deal effective date.
OK to Fund	Required	Indicator (check Box)	Defaults according to the setting of the **OKFND** (*Deal OK to Fund*) system parameter (Y or N) in the **System Parameter** table, and user may modify at any time, via the **Change OK to Fund** indicator option. Event is generated as a record of every charge. Warning is issued whenever outstandings are released if the indicator is set to *No* (not OK to Fund).
Borrowing Base Excess Start Date	System Generated	Display	Beginning with Release 6.0.10.05 and forward, the following Linking Collateral to Limits and Calculation of Availability functionality applies: Displays the earliest of all the borrowing base excess start date across all facilities when the deal has the Include Collateral in Borrowing Base indicator checked. This date is populated on the fly based on the

			current facility level borrowing base excess start dates when the Deal Notebook opens.
Drawdown Limits:			
Maximum Number of Loans	Optional	2 digits	Valid values are *0* to *99*. Cannot be less than maximum number of active match funded loans.
Maximum Number of Match Funded Loans	Optional	2 digits	Valid values are *0* to *99*. Cannot exceed maximum number of active Loans.
SBLC Restrictions:			
Last Issuance By Date	Optional	Date	If input, must be a valid date, represents the date after which no new SBLC's can be issued. Must be greater than the deal-closed date and less than Usage Expiration Date (if one exists). Note: At close, must be prior to the latest facility maturity date of any facility with SBLC risk types.
Usage Expiration Date	Optional	Date	If input, must be a valid date and must be greater than Last Issuance By date (if one exists). Represents the latest date on which an SBLC can expire. Note: At close, cannot be greater than the latest maturity date of any SBLC facility, and cannot be equal or prior to the earliest facility effective date of any SBLC facility. Beginning with Release 6.0.13.05, the enhancement **Allow SBLC Expiry Date to Extend Beyond Facility Maturity Date** is available. Loan IQ has been enhanced to allow the SBLC Usage Expiration Date to be greater than the Facility Maturity Date in the Facility and Deal notebooks when **SUGFM** system parameter is set *Y*. The following validations apply: Allows the Facility SBLC Usage Expiration Date to be later than the Maturity Date of the facility. A warning is displayed at any save if the facility SBLC Usage Expiration Date is later than the facility Maturity Date. If the facility has a Sublimit for SBLC, this functionality allows the facility SBLC Usage Expiration Date to be greater than the sublimit Maturity Date. A warning is displayed at any save if the facility SBLC Usage Expiration Date is later than the sublimit maturity date. Allows Deal SBLC Usage Expiration Date to be greater than the latest maturity date of any SBLC facility. A warning is displayed at Deal Close if the Deal SBLC Usage Expiration Date is later than the latest maturity date of any SBLC facility. For a deal that has already closed, an event is created if the Deal SBLC Usage Expiration Date is updated. For an active facility in a closed deal, an event is created if the Facility SBLC Usage Expiration Date is updated. Facility level SBLC Usage Expiration Date is also updateable via the Deal Change Transaction.
Euro Interim Rounding Rule – Decimal	Conditional	Drop down	Defaults to 15. Rounding is used when converting from or to an amount that is an “In”

			currency.

Note: In any case where SBLC Restrictions defined for a Facility conflict with SBLC Restrictions set up for the Deal, the **most restrictive** *Last Issuance By* or *Usage Expiration* date will be enforced where SBLC's are issued.

MIS Codes Tab

Note: This applies to the separately licensed enhancement, MIS Types to be tagged as required to specific processing areas, available in Release 6.0.08.05 (Patch).

MIS Type can be tagged to a specific Processing Area. The MIS Type-Processing Area association is maintained in the Required MIS Type and Processing Area Association table in Table Maintenance.

Note: This applies to the separately licensed enhancement, MIS Types to be tied to specific processing areas, available in Release 6.0.08.05 (Patch).

MIS Type can be associated with one or more Processing Areas. The MIS Type-Processing Area association is maintained in the Allowed MIS Type and Processing Area Association table in Table Maintenance.

Attribute	Req/Opt	Size/Format	Rules
MIS Codes:			
MIS Code Types List Box			Existing MIS Code Types (and their associated values) pertaining to this deal are listed. Double-clicking on a particular selection brings up a window allowing the user to view/update the selected MIS Code (and associated value). **Note:** The MIS code value field allows a numeric value of 9 positions to the left and 6 to the right of the decimal point.
Add	Optional	Button	Brings up a window allowing the user to add a MIS Code Type (and associated value) to the deal.
Delete	Optional	Button	User may delete a selected MIS Code Type (and associated value) from the deal.
Owning Branch	System Generated	Display	Defaults to creating User's Branch and may be changed only be selecting **Change Branch/Processing Area** option. Note: Changing this Deal's branch to a branch associated with a different time zone places shared locks on two time zones (the ones associated with both the old and new owning branches).
Processing Area	System Generated	Display	Defaults to creating User's Processing Area and may be changed to any other (active) Processing Area that is valid for Deal's Owning Branch, by selecting **Change Branch/Processing Area** option. Note: Only users whose Processing Area matches the Deal's Processing Area can put the Deal into *Update* mode, and changing the Processing Area to one not in the User's list of assigned processing areas switches the Notebook into *Inquiry* mode.
Accounting Enabled	Required	Indicator (check box)	Defaults to value set for the **DACCE** (*Deal Accounting Enabled Default*) system parameter in the **System Parameter** table (in GTM), is separately secured and may be changed only by selecting the **Change Accounting Enabled** indicator.
Deal IDs:			

Tracking #	System Generated	Display	Displays system assigned or user-entered Deal Tracking #. May be changed only by the **Rename** option.
ANSI ID	System Generated	Display	Displays if entered by user. System assigned ANSI IDs are not displayed. May be changed only by the **Rename** option.
Alternate ID	System Generated	Display	Displays if entered by user. System assigned alternate IDs are not displayed. May be changed only by the **Rename** option.
Unscheduled Principal Application Method	Optional	List Box	Available in Release 7.3.0.2, when licensed for **Enhance Incoming Payment Processing**, the following functionality applies. This drop down is only available in the Deal notebooks when the license is activated. The drop down defaults to the setting of the system parameter UPPAM - Unscheduled Principal Payment Application Method.

ABL (Asset Based Lending) Rules

Available in Release 7.4.2.0, when licensed for Asset Based Lending, the following functionality applies.

Attribute	Req/Opt	Size/Format	Rules
Collection Days Applies	Optional	Checkbox	The **Collection Days Applies** field indicates whether the Collection Days Fees applies for the deal or not. If **Collection Days Applies** is enabled, then ABL Collection Days drop down is a mandatory field to be entered by the user. If "**Collection Days Applies**" is disabled, then ABL Collection Days drop-down is greyed out and displays a blank value. The value for **Collection Days Applies** is unchecked by default. This field provides the option to choose one of the Collection Days Fees option amongst the following values : • Actual Number of Days • Straight Number of Days • Lesser of Actual and Straight Number of Days • Flat Charge **Note:** **Collection Days** is the Number of days needed to convert the borrowers' cash receipts to cash (also known as Float Number of Days). **Collection Days Fees** is the Fees the bank charges to the borrower for making the funds available for Collection Days (also known as Float Charges)
Collection Days Options	Conditional	Drop down	This dropdown is enabled only when **Collection Days Applies** check box is enabled. The default value for this drop down is

			"**Actual Number of Days**". If "**Collection Days Applies**" is disabled, this drop-down is greyed out and displays a blank value. This field provides the option to choose one of the Collection Days Fees option amongst the following values : <table><tr><th>Value</th><th>Description</th></tr><tr><td>Actual Number of Days</td><td>This field indicates the number of days needed to convert the borrowers' cash receipts to cash as defined by the FED.</td></tr><tr><td>Straight Number of Days</td><td>This field indicates the number of days needed to convert the borrowers' cash receipts to cash as specified by the business user.</td></tr><tr><td>Lesser of Actual and Straight Number of Days</td><td>This field indicates the lesser value between Actual and Straight Number of Days for Collection Days Fees.</td></tr><tr><td>Flat Charge</td><td>This field indicates a flat amount charged for Collection Day Fees.</td></tr></table>
Straight Days	Conditional	3 digits/ Check box	This field's is only displayed if one of the following values is selected in the Collection Days Options list box: • Straight No. of Days • Lesser of Actual and Straight No. of Days This is a Mandatory option if it is displayed. The value Defaults to 0 (zero).
Amount	Conditional	3 digits/ Check box	This field's is only displayed if the Collection Days Options Value is "Flat Charge". Otherwise, it is not displayed. This is a Mandatory option if it is displayed. The value Defaults to 0 (zero).
Update Collateral Value on Principal Payment	Optional	Indicator (Checkbox)	When this field is enabled (**Double Side Posting)**, a payment received through borrower's cash dominion account would reduce both the outstanding loans in Loan IQ and the Account Receivable Value in the ABL Borrowing Base module. When this field is disabled (**Single Side Posting)**, a payment received through borrower's cash dominion account would

			reduce only the outstanding loans in Loan IQ and not Account Receivable Value in the ABL Borrowing Base module. The value defaults to unchecked.
Payment Application Priority Hierarchy	Optional	Button	When this button is selected it displays the "Payment Application Priority Hierarchy Details Selection" window.

Payment Application Priority Hierarchy Details Selection List Window:

This window displays and captures the priority order of Loan Outstandings by which an external bank system shall apply the sweep payments from the Cash Dominion Accounts to loans under the deal. Hierarchy set up is done post deal close, once (at least one) loan drawdowns have been released.

The Payment Application Priority Hierarchy set up is done in two steps:

User can select the Active Loan Outstandings under the deal in the Available list which are moved to the Selected list.

User can change the order of the Selected Loan Outstandings via Drag and Drop in the Selected list.

Attribute	Req/Opt	Size/Format	Rules
Available	Optional	List (showing multiple attributes)	This displays the list of Loan Outstandings to be included in the Payment Application Priority Hierarchy. Only the active loan outstandings are displayed under the deal The following attributes are displayed : • Alias (Loan Outstanding) • Status (Loan Outstanding) • Facility The default order of the loans is alphabetical order based on Loan Alias. The user can select one or more rows in the **Available list**. The selected rows are displayed by the system under the **Selected List** in the same order. If the user chooses to add more outstanding loan records to an existing hierarchy, the additional outstandings that are selected from the Available List are appended at the end of the Selected List.
Selected	Optional	List (showing multiple attributes)	This shows the hierarchy of the selected Loan Outstandings for Payment Application Priority. The hierarchy is displayed as blank till it is set up for the first time. The following attributes are displayed : • Alias (Loan Outstanding) • Status (Loan Outstanding) • Facility The selected loans can be re-ordered via drag and drop, which includes re-ordering multiple loans together.

			User can choose to remove one or more Loans from the Selected list by selecting that row.
Search	Optional	Text box	This Search capability assists the user to choose a particular loan outstandings under the deal.
OK	Optional	Button	This button confirms and saves the hierarchy.
Cancel	Optional	Button	This button cancels any changes made in the window.

Available in Release 7.4.3.0, when licensed for **Asset Based Lending**, the following functionality applies:

ABL (Asset Based Lending) Rules

Attribute	Req/Opt	Size/Format	Rules
Auto Sync with ABL Collateral Module	Optional	Checkbox	When this field is enabled, the Deal/Facility details will be synced with ABL Collateral Module as part of the integration between Loan IQ and -the ABL Borrowing Base module. *Please refer Loan IQ - ABL Borrowing Base Module Integration Guide* for more details. Selecting this field is a pre-requisite to set/update the 'Update Collateral Value on Principal Payment 'checkbox.

Note: The Float Days (previously called Collection Days) and Payment Application Hierarchy (previously Payment Application Priority Hierarchy) have been moved from the MIS Codes tab to the Deal Borrower's Preferred Remittance Instruction.

Available in a Release TBD the following separately licensed Funding Allocation for Loans Using Facility Amortization Schedule functionality applies.

Note: The following separate licenses must be activated for Funding Allocation for Loans Using Facility Amortization Schedule functionality:

Remote Operations

Event Management

Exceptions Log

At the deal level 'MIS Codes' tab, if 'Valid for Summit' code value is set to 'Yes', any initial draw down /re-pricing transaction when launched for this deal, has the same default value on respective 'transactions> codes' tab. However, users have the choice to use this default value, or modify to 'No' or delete 'MIS code-Valid for Summit' attribute from the transactions / loan notebook. This is possible any time after creation of the transaction or from the released loan notebook resulting from release of the transaction.

Note: After transactions are released the "Valid for Summit" value from the MIS Codes tab should **never** be modified by users. If the value is modified after the transaction is released the funding details may have discrepancies and clients have sole responsibility to resolve at their end.

Deal MIS Code Details

MIS Codes **optional**. If defined, required information is needed to **save**.

Attribute	Req/Opt	Size/Format	Rules
Selected MIS Code Name	Required	Table: Selected MIS Code Table	Select one MIS Code Type from list of (active) codes. Note: If MIS Code Name contains only one possible value, list defaults to that Name.
MIS Code Value	Required	Table: Selected MIS Code Values or 20 char free-form entry	The system will determine whether the MIS Code Value is selected from (active) values in the particular list pertaining to the MIS Code Type, or is entered (free-form) by the user. If selected, choose one value from the list of (active) codes. Value entered cannot exceed 20 characters. Must be numeric and will default to zero if the **Amount Field** indicator on the MIS Code Table entry has been checked on (set to *Yes*), else no default. **Notes:** If MIS Value drop list contains only one possible value, list defaults to that Value. If user selects the MIS Code Description associated with MIS Code Type of *MTVAR*, the associated 20 –character value will be picked up by the system and reflected on all Outgoing Money Transfer messages for that deal. In addition, if the Bank Code in the Deal matches the bank code specified in the **MTVR1** parameter in the Billing Parameter Table, the MIS Code Description and associated value will be referenced on all bills to the borrower (in place of the Cash Account Number lookup). For Notices prepared on-line, the comparison is between the **MTVR1** parameter in the Billing Parameter Tables and the logged-on user's bank code. If equal, the **MTVAR** lookup will be performed in place of the Cash Account Number lookup, when preparing borrowers Notices. Users have the ability to search for an MIS Code Value associated with an MIS Code. By entering a portion of the appropriate MIS Code Value in the **Value** field, the system will display all MIS Code Values that match the character entered in the **Value** field. For example, if the number *5* is entered in the **Value** field, then Loan IQ will display all MIS Code Values, which are associated with the selected MIS Code, that begin with the number *5*.

Calendar Tab

Holiday Calendars are defined at the deal level. Calendars defined for the deal will flow down to the outstanding level and can be subsequently modified. Holiday Calendars are associated with different purposes: Borrow Intent Notice, FX Rate Setting Notice, Interest Rate Setting Notice (including Treasury Review and Setting Cost of Funds), Effective Date, Payment Notice Date, and Billing. Any and all Holiday Calendars added to the list may also be deleted. The calendar associated with the branch of the logged in user (i.e., the deal branch), which is the default, remains implied even if deleted. Also, the calendar associated with the **currency of the deal** is also implicit, although it never appears on the calendar tab.

Note: Dates on the deal and facilities levels will also be validated against both implied calendars.

Attribute	Req/Opt	Size/Format	Rules
Holiday Calendars List Box			Defaults to the calendar associated with the Branch of the user creating the deal.
Add	Optional	Button	Brings up the Holiday Calendar Select window.
Delete	Optional	Button	Deletes the highlighted calendar. If all calendars have been deleted, validation for both deal and outstanding uses the respective currency calendar.

Holiday Calendar Select

Attribute	Req/Opt	Size/Format	Rules
Calendar	Required	Table: Holiday Calendar Table	No Default. Select from the list of (active) codes.
Borrower Intent Notice	Optional	Indicator (check box)	Defaults to *Yes* (checked). May be unchecked. When checked, system will use selected calendar in calculating the Target Date for the Borrower Intent Notice, depending on number of Intent Notice *Days in Advance* set in Deal Pricing Rules for the outstanding's Pricing Option. System will search for earliest valid Business Date, which will satisfy number of valid business days needed for each selected calendar where **Borrower Intent Notice** indicator is checked.
F/X Rate Setting Notice	Optional	Indicator (check box)	Defaults to *Yes* (checked). When checked, system will use selected calendar in calculating the Target Date for the F/X Rate Setting Notice, depending on number of FX Notice *Days in Advance* are set in Deal Pricing Rules for the outstanding's Pricing Option. System will search for earliest valid Business Date, which will satisfy number of valid business days needed for each selected calendar where **F/X Rate Setting Notice** indicator is checked.
Interest Rate Setting Notice (including Treasury Review and Set Cost of Funds)	Optional	Indicator (check box)	Defaults to *Yes* (checked). May be unchecked. When checked, system will use selected calendar in calculating the Target Date for the Interest Rate Setting Notices and Treasury Review Workflow for setting match funded Cost of Funds, depending on number of *Days to Treasury Review* set in Deal Pricing Rules for the loan's Pricing Option.

			System will search for earliest valid Business Date, which will satisfy number of valid business days needed for each selected calendar where **Borrower Intent Notice** indicator is checked.
Effective Date	Optional	Indicator (check box)	Defaults to *Yes* (checked). May be unchecked. When checked, system will use selected calendar in validating the Effective Date for the outstanding, depending on non-business days and holidays for the selected calendar. System will issue a warning, which will include all calendars where the date chosen is a non-business date and Effective Date is checked.
Payment Advice Dates	Optional	Indicator (check box)	Defaults to *Yes* (checked). May be unchecked. If checked, calendar is used to determine Target Date for releasing IMT cashflows with payment methods *Swift* and *Telex*, based on *Number of P.A. Days* set for an outstanding's currency on the *Currency Details* window in the Facility Notebook.
Billing	Optional	Indicator (check box)	Defaults to *Yes* (checked). If checked, calendar will be used to calculate correct number of Billing Days, based on *Billing Number of Days* set on the Pricing Rules Tab for the selected pricing option.

Pricing Comment Tab

Selecting the **Pricing Summary Comment** button allows user to enter a free-form text Summary of pricing. Unlike other comments, the Pricing Summary Comment may be updated by **any user** with the proper update authority in user profile.

Beginning with Release 6.0.09.02 and forward, the Pricing Comments tab or Pricing Comment Icon (if using Explorer Mode) are highlighted whenever a comment exists. The Pricing comment tab highlight is removed, if the comment is deleted.

Attribute	Req/Opt	Size/Format	Rules
Pricing Summary Comment	Optional	Button	Brings up *Comment Edit* window

Comment Edit Window

Attribute	Req/Opt	Size/Format	Rules

Subject	Required	40 char	Defaults to Deal Pricing Summary and cannot be changed.
Comment	Required	256 char	Free-form entry.

OK	Optional	Button	Saves comment.
Cancel	Optional	Button	Exits comment window without saving any changes.
Delete	Optional	Button	Deletes existing comment subject to the restrictions above.
Print	Option	Button	Prints the comment

Admin/Event Fees Tab

Allows user to enter **Admin Fee** and/or create **Deal Event Fees.**

Admin Fee - Paid by Borrower at a pre-determined frequency (normally yearly), but is not distributed pro-rata to Lenders. When received, it is distributed to those noted on the **Admin Fee Distribution List**, who may not even be lenders in the deal, but must have Lender Profiles (and Servicing Groups) defined for them. May be charged as a flat fee or a simple formula (rate times Global Current Amount). The Admin Fee is the only fee that can be either amortized or accrued. Admin Fee must have a Distribution List in order to be released.

Note: The Admin Fee Change Transaction functionality is available in Loan IQ. Please refer to the *Misys Loan IQ Admin Fee Change Transaction Setup & User Guide* and *Misys Loan IQ Fee Edit & Validation Rules* documents.

Unreleased Admin Fees in a pending deal will be released automatically when the deal is closed, **unless** fee effective date is **later** than deal close date.

Multiple Admin Fees (which can be a mixture of Amortized and Accrued) can exist within a deal, and drilling down on a selected fee brings up the Admin Fee Notebook. For further details, please see *Misys Loan IQ Fee Notebook Edit & Validation Rules*.

Available in Release 7.3, when licensed for **Modification to Bills Based on Contact Addresses and Co-Borrower**, the following functionality applies.

When Bill Recipients is licensed a “Bill Recipients” button is displayed on the Deal Admin Fee notebook. Please see Deal Borrower window at page 39, for more information.

Note: The **Zero Out All Share Amounts** option is available on the View/Update Lender Shares window for Amortizing and Admin Fee payments. This option allows the user to zero out all the prorated lender shares amounts. The calculated prorated lender amount on a specific lender may be reinstated manually, if needed.

Event Fees - Fees of this type are transaction-related and have templates set up for them at the Deal level defining how the fee calculations will **default** when a fee payment for that type of transaction is created. When applicable, these event-driven fees will be calculated, may flow down to the Loan, Fee Payment or Circle NB, if appropriate, and may be overridden there. Transaction-related fees have **no spreads, no skims, and no matrix.**

Transaction Description: The **User Defined Transaction Description** is a separately licensed enhancement, available in Service Pack Release 6.0.09.11 and later releases. This enhancement provides the ability to add an optional free form 256 character transaction description for all outstanding transactions (including outstanding fee payments), and direct GL postings . This description is then displayed in the history screen(s) and is captured for the transaction summary mailed to the customer. The **Transaction Description** may be viewed and/or edited at any stage on any of the notebooks where the **Transaction Description** is input. The **Transaction Description** can then be retrieved and/or reported on when generating transaction summaries, reports and all other transaction related output. Please refer to the *Misys Loan IQ User Defined Transaction Description User Guide* for a

comprehensive list of where the Transaction Description can be found in Loan IQ and for further information.

Notes:

A validation error is displayed if the formula rate entered is greater than 25%.

Internal Commission and Assignment recordation fees when set up as Flat amount fees can be templated in a currency other than the deal currency. The flat amount and the currency flow down to the Circle Notebook where they can be modified.

Available in Release 7.3.1 with separately licensed enhancement, *CO Address on Billing*, the 'Bill Care of Contact' can be selected on a Deal Admin Fee.

Validation - When the 'Bill Care of Contact' is selected on a Deal Admin Fee, there is a validation to confirm if a contact with the required 'Care of' purpose code exists in the Primary Borrower Servicing Group. If the appropriate contact type does not exist, then the following error message appears - "Bill Care-of Contact may not be checked because the fee payer servicing group does not include a care-of contact".

Attribute	Req/Opt	Size/Format	Rules
Administrative Fees			
Admin Fees List Box	System Generated	Display	Available in Release 7.1, the following Fee ID on Fee Notebook and Fee Lists functionality applies: Displays the Fee Alias (if licensed), Effective Date, Expiry Date, Income Method, Status and Rate/Amount for every Admin Fee defined for this deal. Drilling down into a selected Admin Fee brings up the associated Fee Notebook, so user can view or edit the fee details.
Add	Optional	Button	Brings up the *Select an Income Method* window so user can choose either *Amortize* (default) or *Accrue*. When user OK's Income Method, Fee Notebook opens up for the new Admin Fee.
Delete	Optional	Button	Deletes the selected Admin Fee. (Only pending fees may be deleted).
Performing Status	Required	Display	Defaults to Accrual, indicating that all Admin Fees defined for this deal are accruing or amortizing, as applicable. Note: May be changed only by selecting the **Change Performing Status** option from the **Accounting** menu.
Event Fees Template			
Event Fees List Box	System Generated	Display	Existing deal templated event fees (and their associated amounts or rates and indication of whether or not they are distributed to lenders) are listed. Drilling down brings up the *Fee Details* window allowing the user to access/update the selected fee. Available in a Release TBD, the **Bill of Exchange Acceptance Fees** functionality applies. All Fees created under the Bill of Exchange Acceptance Fee category are available in the Event Fees template at the Deal Notebook level. When these Fees are then added to the Bill of Exchange Initial Drawdown the fee amounts flow down from the Event Fees templates in the Deal

			Notebook, if defined, otherwise fee amounts default to zero, as per current functionality. Available in Release 7.3.1, the separately licensed VAT Assessments Due from Borrower on Interest and Fees enhancement: A new column *Fee Liable for VAT* column is added. To indicate the new VAT status of each Fee it is required that a new marker/identifier e.g. “Fee liable for VAT” should be displayed both on instances of the individual Fee notebook as appropriate and as a new column within either the Event Fee Template section NOT updatable
Add	Optional	Button	Brings up the *Fee Details* window-allowing user to add a new Event Fee.
Delete	Optional	Button	Deletes the selected Event Fee.
Fee	Required	Table: Deal Event Fee Types	Select one Event Fee that can be templated at the deal level. Fee Types already templated for this deal do not appear in the list.

Fee Details

Attribute	Req/Opt	Size/Format	Rules
Distribute To All Lenders	Conditional	Indicator (check box)	Defaults to *Yes* (checked) or *No* (unchecked), depending upon how the **Distribution (Y/N)** column has been set in the Pricing Fee Type Table (in GTM), but may always be modified. *Yes* (checked) indicates the fee will be distributed pro-rata to all lenders in the deal. *No* (unchecked) indicates Host Bank will retain entire fee. **Notes:** Certain fee payments (for example, all SBLC Fee Payments) must be non-Distributable. Other fee payments (such as Drop Dead and Amendment Fee Payments) are always distributed. Setting of **Distribute to All Lenders** indicator is ignored in these cases. When a Fee Payment is created for an event fee templated at the deal-level, the fee payment defaults to either Distributed or Non-Distributed, depending upon the template indicator as long as that particular Fee Payment may be either type, and if template is incorrect, the pending fee payment must be deleted and re-created after the template indicator has been modified. If the fee is not templated at the deal level, the fee payment default is governed by the **Distribution (Y/N)** column in **Pricing Fee Type** table (in GTM) and cannot be modified, again, as long as that particular Fee Payment may be either distributable or non-distributable. Note: When the fee shares for a Distributable fee are allocated, user may tweak them in the Fee Notebook to remove some lenders and/or to re-allocate the fee shares differently. However, user may not assign a fee share to anyone who is not a lender in the deal.
Flat Amount/Formula	Required	Indicator	Defaults to *Flat Amount*.
Flat Amount	Conditional	System Amount standard	Required if Event Fee is charged as a Flat Amount, else not applicable. Cannot be a negative amount.
Currency	Conditional	Drop list Table: Currency	Defaults to the currency of the deal. The drop-down list with all active currencies from the Currency table in GTM is enabled for **Internal Commission** and **Assignment Recordation** fees that are defined as Flat amount fees, i.e. Flat radio button is selected. If the above named fees are formula based then Currency defaults to the currency of the deal and cannot be modified. Currency is protected for all the other fees.
Percentage Rate	Conditional	Percent	Required if Event fee is charged as a simple formula (Balance Type x Rate), else not applicable. Cannot be a negative rate. Admin

			Fees cannot have a rate exceeding 25%. A rate entered for an Admin Fee based on a formula may have a decimal precision of 5 significant digits. Note: The pre-defined balance Type for this particular fee (Circle Amount, Activated Amount, etc.) is displayed along with the Rate.

Fees Tab

Only **Upfront Fees** and **Ongoing Fees** will be referenced in Deal Pricing Text. For details regarding Upfront Fees and Ongoing Fees Pricing Text, please see separate document *Misys Loan IQ Pricing Edit & Validation Rules*.

Ongoing Fees

Attribute	Req/Opt	Size/Format	Rules
Modify Ongoing Fees	Optional	Button	Brings up *Ongoing Fee Pricing* window to allow user to change Ongoing Fee Pricing.
Ongoing Fee Zoom	Optional	Button	Displays Ongoing Fee Pricing. User can print pricing from this window.

Upfront Fees

Attribute	Req/Opt	Size/Format	Rules
Modify Upfront Fees	Optional	Button	Brings up *Upfront Fee Pricing* window to allow user to change Upfront Fee Pricing.
Upfront Fee Zoom	Optional	Button	Displays Upfront Fee Pricing. User can print pricing from this window.

Bank Roles Tab

Attribute	Req/Opt	Size/Format	Rules
Add Bank	Optional	Button	Brings up *Lender Select* window in order for user to choose a lender for the desired Bank Role. The following Customer Status functionality is available beginning with Release 6.0 and forward: Only Lenders with a status defined as "Active" are available for selection.
Delete Bank	Optional	Button	Delete selected lender from Bank Role list window. Currently, there are no validations in place in Loan IQ to prevent the deletion of a lender, even if the lender is an SBLC or BA issuing Bank and has shares in an outstanding.
Sales Difficulty Factor	Required	1 to 3 digits followed by up to 5 decimals	Defaults to *1.00000*. Maximum value is *999.99999*, and must be greater than zero. (Minimum value is *0.00001*). Sales Difficulty factor is hidden from unauthorized users.

Host banks with the same **customer and branch** cannot share common bank roles. The same Host Bank Lender noting the same Customers and Branch can be added to the Bank Role list multiple times, as long as a **different** Bank Role is assigned to each.

Non-Host banks with the same **Customer and Servicing group** cannot share common bank roles. The same Non-Host Bank Lender noting the same Customer and Servicing group can be added to the Bank Role list multiple times, as long as a **different** Bank Role is assigned to each.

Bank Role Details

Attribute	Req/Opt	Size/Format	Rules
Bank Name	Required	Short Name	Must select customer with a lender profile.
Servicing Group	Conditional	Button	SBLC Issuing Banks: All SBLC Issuing Banks must have a Servicing Group. Bid, Swingline Banks and BA Issuing Banks: All Host Bank Lenders with a Bid or Swingline or BA Issuing Bank Role require a Servicing Group. Non-Host Bank lenders named as Bid, Swingline, or BA Issuing Banks require a Servicing Group only if Host Bank is Agent. Notes: When required, Servicing Group must be present in order to save the Bank Role. For Host Bank lenders, Branch of selected Servicing Group becomes the Branch of the Portfolio Information for the indicated lender.
Reference Bank	Required	Indicator (check box)	Defaults to *No* (not checked), indicating the selected Lender is not a Reference Bank. User may change to *Yes*. Customers selected as *Reference Banks* must have Lender Profiles, but need not be lenders in the deal. Notes: One set of Reference Banks may be set up for a deal, and all pricing options allowed for this deal except Bankers Acceptances pricing option(s) will reference this one set of Reference Banks, if their **Reference Banks Apply** indicator has been set to *Yes* (checked). Bankers Acceptances have their own set of BA Reference Banks.
Bid Bank	Required	Indicator (check box)	Default to *No* (not checked), indicating the selected Lender is not a Bid Bank. User may change to *Yes*. Competitive Bid Banks are eligible to fund competitive bids. Customers selected as *Bid Banks* must have Lender Profiles, but need not be lenders in the deal.
SBLC Issuing Bank	Required	Indicator (check box)	Default to *No* (not checked), indicating the selected Lender is not an SBLC Issuing Bank. User may change to *Yes* Customers selected as *SBLC Issuing Banks* must have Lender Profiles, but need not be lenders in the deal.
Swingline Bank	Required	Indicator (check box)	Default to *No* (not checked), indicating the selected Lender is not a Swingline Bank. User may change to *Yes*. Swingline Banks are obligated to fund swingline borrowings. Customers selected as *Swingline Banks* must have Lender Profiles but

			need not be lenders in the deal.
BA Issuing Bank	Required	Indicator (check Box)	Defaults *No* (not checked), indicating the Selected Lender is not a BA Issuing Bank. User may change to *Yes*. Customers selected as *BA Issuing Banks* must have Lender Profiles but need not be lenders in the deal.
BA Reference Bank	Required	Indicator (check Box)	Default to *No* (not checked), indicating the selected Lender is not a RAC Bank. User may change to *Yes*. Customers selected as *RAC Banks* must have Lender Profiles, but need not be lenders in the deal. Note: One set of BA Reference Banks may be set up for a deal, and all BA pricing options allowed for this deal will reference them, if the **Reference Banks Apply** indicator has been set to *Yes* (checked) in the pricing option.
RAC Bank	Required	Indicator (check Box)	Default to *No* (not checked), indicating the selected Lender is not a RAC Bank. User may change to *Yes*. Customers selected as *RAC Banks* must have Lender Profiles, but need not be lenders in the deal. Note: RAC Reference Banks will be referenced only for loans in currencies that have the **RAC Applies** indicator checked on the *Currency Details* window for that currency in the Facility Notebook.
Percent	Conditional	Percent	Applies only if **Swingline Bank** or **BA Issuing Bank** has been set to *Yes*, and is required. If entered, cannot exceed *100%*. Sum of Swingline percentages for all Swingline Banks in deal cannot exceed *100%*. Sum of percentages for all BA Issuing Banks in the deal cannot exceed *100%*. Defaults to *zero*. Note: When assigning multiple Bank Roles on a single *Bank Role Details* window, it is not possible to check both the **Swingline Bank** and the **BA Issuing Bank** roles, since both of these roles require entering a Percent, and there is only one Percent field available. However, the workaround would be to add the same Bank / Servicing Group combo twice, first assigning the Swingline Bank Role (with its associated percentage) and then assigning the BA Issuing Bank Role(with its associated percentage) to the other entry.
Portfolio Information	Conditional	Percent	Any Host Bank Lender designated as a Bid Bank, Swingline Bank, BA or SBLC Issuing Bank requires Portfolio Information (the Branch, Portfolio and Expense code that will be used to create the Host Bank Portfolio Loan Share) in order to save the Bank Role. Portfolio Information is not applicable and cannot be entered for Non-Host Banks, and is optional for Host Banks named as Reference Banks or BA Reference Banks. Note: Branch defaults to the Branch associated with the selected Servicing Group, and cannot be changed. User then chooses a Portfolio that is valid for that Branch, then an Expense Code that forms a valid combination with that Portfolio. (*Valid* means that the Portfolio /Expense Code combination is included in a Risk Book).

Portfolio Information	Conditional	Button	Brings up *Portfolio Information* window in order for user to choose a Portfolio and Expense Code. As per the **Expense and Branch Code Association** enhancement, available with Release 6.0.08.08, the following separately licensed enhancement applies: The Expense Code drop down displays only valid Expense Codes for the mandatory Branch corresponding to the Servicing Group selected for a Host Bank Lender on the Bank Role Details screen. If the Servicing Group is changed after selecting the Expense Code on the Portfolio Information screen, Loan IQ validates the Branch corresponding to the new Host Bank Servicing Group with the selected Portfolio/Expense Code. If the Portfolio and/or the Expense Code are not valid for the new Branch, Loan IQ displays a warning and an option is provided to continue. If the selection is to continue, Loan IQ blanks out both the Portfolio and Expense code to discard the previous selections. A new Portfolio and a new Expense Code, valid for the new Servicing Group, must be selected.

Ratios/Conditions Tab

Financial Ratios and Outside Conditions are **optional**. If defined, required information is needed to **save.**

Attribute	Req/Opt	Size/Format	Rules
Outside Conditions: Three Outside Conditions may be defined. All are optional. If defined, the following fields are required for each one.			
Outside Condition Description	Required	60 Char	Free form, deal-specific description is required for each Outside Condition defined for the deal.
True/False	Required	Indicator (Check Box)	Defaults to False for each Outside Condition. User may change to True.
History	Optional	Button	Brings up *Deal Outside Condition History* window, displaying the Condition, Indicator (True or False), Start Date and End Date for the Selected Outside Condition(s). **Select Condition** drop-down at top of the *History* window allows user to select history for Outside Condition 1, 2 or 3. In addition, **Print**, **Export** and **Insert** buttons are available. Manual adjustments may be made to the Deal's Outside Condition History by drilling down on a selected history item and/or via the **Insert** button. Notes: Start and End Dates for existing history items cannot be edited. An event is created on the Events Tab whenever changes are made to an outside condition, either via the **History** window or by changing a condition from true to false or vice versa. Changing the Deal Outside Condition History creates an **as-of trigger (and a re-accrual)** back to the Start Date of the history entry that

			changed.
Deal Financial Ratios			
Financial Ratio Listing	System Generated	Display	Displays the Type, Ratio and Effective Date for all Financial Ratios that have been defined for the deal. Drill down to update.
Add	Optional	Button	Brings up a window, allowing user to add a new ratio.
Delete	Optional	Button	Deletes the selected Financial Ratio. Note: Cannot delete a Financial Ratio that is used in a Pricing Matrix.
History	Optional	Button	Brings up Deal Financial Ratio History, displaying the history for the selected financial rates. Description, Ratio Value, Start and End Dates are shown and **Print**, **Export** and **Insert** buttons are available. Manual adjustments may be made to the Deal's Financial Ratio History by drilling down on a selected history item and/or History via the Insert button. Note: Start and End Dates for existing history items cannot be edited.

Notes:

An event is created on the Events tab every time a Financial Ratio is added or changed, either via the *History* screen or by drilling down on a specific ratio.

Changing the Deal Financial Rates History creates an as-of trigger (and a re-accrual) back to the Start Date of the history entry that changed.

Financial Ratio Add Window

Attribute	Req/Opt	Size/Format	Rules
Ratio Type	Required	Table: Financial Ratios	Select one value from list of (active) codes. No default, and no duplicates. (A specific Financial Ratio may be defined only once for a given deal).
Financial Ratio	Required	15 char	User defined numeric expression. Defaults to 1.0000, and may be modified. While up to four digits before and 11 digits after the decimal position can be accommodated, financial ratios are rounded to four decimal positions when displayed on *Histories* window and in the Deal Notebook. Note: Financial Ratio may be negative.
Start Date	Required	Date	Defaults to current business date and may be modified and be earlier than Deal creation date. .

Pricing Rules Tab

Allowed Pricing Options: Multiple Pricing Options may be defined for an **Outstanding Type** (Loans, Intraday Loans, Bankers Acceptances, Discount Loans, Non-Loans, SBLC's and Repo Loans)**.** User selects the **Add** button to bring up the *Interest Pricing Option Details* window: User may click on the **Delete** button in order to delete a selected Pricing Option. Option may **not** be deleted if it is in use by any outstanding or referenced in Interest Pricing.

Available in Release 7.2.7, the separately licensed Accruing Fees at the Outstanding Level functionality applies.

The ability to add more than one outstanding ongoing fee to a single outstanding is provided from the Pricing Rules tab in the Pricing Rules section of the Deal notebook. The outstanding fee type is added at the Deal level in order to subsequently add the fee(s) to an outstanding.

Available as a patch to Release 6.0.10.05, the **Add a Facility to a Closed Deal** enhancement allows a new Facility to be added to a closed Host Bank non-agented Deal using the Facility API. For more information, see the Facility API Guide. In addition, a new system parameter, **DMSGN** (Default Main Servicing Group for Facilities in Host Bank Non-agented Deals), determines how the value of the Main Servicing Group for the facility is set. For details, refer to the System Parameter section of the Online Help.

Available in Release 7.4, as per the separately licensed *Apply Penalty Spread when Past Due* functionality, the following two indicators are available under the Pricing Rules tab of a Deal notebook.

Autoapply penalty spread when Past Due

Penalty Spread Application Based on Past Due Grace Days

The value of these indicators (whether checked or unchecked) flows from two system parameters - **APSPD** (Automatically Apply Penalty Spread when Past Due) and **PSAGD** (Penalty Spread Application based on Past Due Grace Days) respectively.

When a user creates a new Deal, the checkbox against each indicator is either selected or clear, based on the Y/N value set for the corresponding system parameter.

For the existing deals, the checkbox against each indicator is set based on the default value of the corresponding system parameter - *Autoapply Penalty when Past Due* indicator is unchecked and *Apply Penalty Spread when Past Due Grace Days* is checked.

Users can maintain the two indicators before and after the deal closure.

Before Deal closure, the user can change the value of the indicators by selecting or clearing the respective checkbox, as per the business requirement. Any changes made to the indicators before the deal closure does not post any event on the deal notebook.

After Deal closure, the user can change the value of the indicators only through a Deal Change Transaction. Under the Pricing Option tab of the Deal Change Transaction notebook, the previous values of the indicators *Autoapply Penalty Spread when Past Due* and *Apply Penalty Spread based on past-due Grace Days* are read-only, whereas the new values are updateable. By default, the new value of the two indicators is same as the previous value. User can select (or clear) the checkbox against the indicators as per the requirement to change the value of the indicator.

Once the indicators are modified and the Deal Change Transaction is sent to approval, the information message: *The indicator "Autoapply Penalty Spread when Past Due" is unchecked. The value of "Apply Penalty Spread based on past-due Grace Days" would not apply."* is displayed when:

Value of the indicator Autoapply Penalty Spread when Past Due is changed from Y to N, or

Value of the indicator Apply Penalty Spread based on past-due Grace Days is changed from Y to N or vice versa, with the current value of the Autoapply Penalty Spread when Past Due indicator is set to N.

After the successful release of the Deal Change transaction, in case *Autoapply Penalty Spread when Past Due* is updated, a history record is added/updated only for *Autoapply Penalty Spread when Past*

Due indicator and a separate event is posted on the Deal Notebook indicating the change in value of this indicator. The history record for this indicator is maintained by the *History* button next to it under the Pricing Rules tab of the Deal notebook. Clicking the History button displays the Autoapply Penalty Spread when Past Due History screen.

Note: Loan IQ does not allow users to make any back-dated modifications to the Autoapply Penalty Spread when Past Due history screen; thus, the *Insert* button on Autoapply Penalty Spread when Past Due History screen is disabled.

The two attributes (*Autoapply Penalty Spread when Past Due* and *Apply Penalty Spread based on past-due Grace Days)* at the deal level exist in Deal level only and control all loans under that deal. So, the Deal itself is applicable for Auto Apply Penalty Spread and for factoring in grace days. If the Auto Apply Penalty Spread is turned off at the Deal level, all loans under that Deal stop applying past due.

Interest Pricing Option Details Window

Attribute	Req/Opt	Size/Format	Rules
Pricing Option	Required	Table: Pricing Option Name	No default. Select one value from list of (active) pricing options. Notes: Cannot delete a Deal Pricing Option if Facility Interest Pricing Text references that option. Pricing options that have been defined (in Pricing Options Name Table) for the various Outstanding Types will be presented for selection.
Initial Fraction Rate	Required	List of Valid Fractional Rates	Defaults to *1/8*. User may select another value from list of valid values (*1/2*, *1/4*, *1/8*, *1/16*, *1/32*, *1/100 and 1/200*).
Round	Required	List of Valid Rounding Directions	Defaults to *Nearest*. User may select another value from list of valid values: (*Up, Down, Nearest, Actual*). Note: If *Actual* is selected, indicating no rounding is desired, then the Initial Fraction Rate defaults to *N/A* and is protected.
Rounding Decimal Precision	Required	List of Valid Decimal Places	Defaults to *3*. User may select another valid value from list of valid values (*2,3,4,5,6*).
Round	Required	List of Valid Rounding Directions	Defaults to *Nearest*. User may select another value from list of valid values (*Up, Down, Nearest, Actual*). Note: If *Actual* is selected, indicating no rounding is desired, then the Rounding Decimal Precision defaults to *N/A* and is protected.
Non Business Day Rule	Required	Table: Non Business Day	Default is based upon System Parameter **BDRUL**. User may select another valid value from list of (active) codes (*Same Day, Next Business Day, Previous Business Day, Modified Following Business Day, Modified Previous Business Day*).
Non Business Day Rule Definitions: For each interest pricing option and fee pricing option created at the			

deal level, the user is required to identify the *Non Business Day Rule* used to calculate the business day to be used when the already-calculated business day falls on a non-working day. Choices from the **Non Business Day** table in **Table Maintenance** are listed below: **Same Day (SAME)**: Loan IQ uses the actual calculated date, regardless of whether or not it is a non-business day. **Next Business Day (NEXT)**: Loan IQ uses the next business day greater than the calculated date. **Previous Business Day (PREV)**: Loan IQ uses the previous business day less than the calculated date. **Modified Following Business Day (MNEXT)**: If the calculated date is a non business day (for example, *Sunday, May 31)*, and the next business day is in a different month from the calculated business day (for example, *Monday, June 1)*, Loan IQ uses the most recent/previous business day from the same month as the month of the calculated business day (in this case, *Friday, May 29*). If the calculated date is a non-business day and the next business day is NOT in a different month from the calculated business day, the normal **Next Business Day** rule applies. **Modified Previous Business Day (MPREV)**: If the calculated date is a non business day (for example, *Sunday, July 1)*, and the previous business day is in a different month from the calculated business day (for example, *Friday June 29)*, Loan IQ uses the next business day in the same month as the month of the calculated business day (in this case, *Monday, July 2*). If the calculated date is a non-business day and the previous business day is NOT in a different month from the calculated business day, the normal **Previous Business Day** rule applies.			
Utilization Impact	Required	Table: Utilization Impact	Defaults to Utilization Impact default value associated with selected Pricing Option. User may override to another valid value from **Utilization Impact** table if the Pricing Option's **Utilization Impact Updateable** indicator is set to *Yes*.
Utilization Impact Definition: Utilization Impact is how Loan IQ determines the lender distribution of any utilized or unutilized fees. There are three selections the user can choose from. **None**: When this is selected, there is no utilization impact. If there is a loan draw down and the user has set up utilization fees, the draw down will not affect utilization. **Actual Outstandings**: When this is selected, the draw down will affect utilization and the actual lender shares of the outstanding will be how LIQ will distribute the fee. This selection will ensure that **if** the lender shares of the loan are adjusted, the loan will affect utilization and LIQ will distribute the fee based on the adjusted lender shares of the loan. **ProRata**: When this is selected, the draw down will affect utilization and the prorata share of the outstanding will be how LIQ will distribute the fee, even if the lender shares of the outstanding are adjusted.			
Matrix Change Application Method	Required	Table: Matrix Change Method	Defaults to *Effective date of change*. User may select another valid value from list of (active) matrix change application methods. Defines how and when a spread change will be applied to existing loans. Effective Date of Change - New interest spread will take affect as of the effective date of the matrix change. Next Repricing Date - New interest spread will not take effect until the next repricing date for current outstandings (thereby taking effect for the new repricing period when the loan is repriced), but any new outstandings booked after effective date of matrix change will have the updated spread. Start of Current Cycle - new interest spread will take effect as of the beginning of the current interest (and the current cycle will reaccrue) Start of Next Cycle - new interest spread will not take effect until the next interest accrual cycle starts. Note: If any potential or active outstanding exists for this deal using this option has a Fixed

			Repayment Schedule, this cannot be changed from *Start of Next Cycle*.
Rate Change Application Method	Required	Table: Rate Change Method	Defaults to *Effective date of change*. User may select another valid value from list of (active) rate change application methods. Defines when an interest base rate change will take effect (if the pricing option is linked to a floating rate table, that is when prime changes). Effective Date of Change - New base rate will take affect as of the date of the rate change Start of Current Interest Cycle - new base rate will take effect as of the beginning of the current Interest cycle (and the current cycle will re-accrue) Start of Next Cycle - new base rate will not take effect until the next interest cycle starts. Start of Next Month - new base rate will not take effect until the beginning of the next month. Start of Next Quarter - new base rate will not take effect until the start of the next quarter. Note: If any potential or active outstanding exists for this deal using this option has a Fixed Repayment Schedule, this cannot be changed from *Start of Next Cycle*.
Payment Mode	Required (if Pending Deal)	Drop-down list	Available in Release 7.1, the separately licensed enhancement *Payment Mode in Interest Pricing Option Details* is available. Defaults to blank. User may select values: *Paid in Arrears* or *Pay in Advance*. On Pending Deals, the field is required. An error message is displayed if user tries to exit screen without selecting a value. Payment Mode is mandatory. On Closed Deals, the field is modifiable via the Deal Change Transaction. The change does not impact either active or terminated outstandings.
Interest Due Upon Repricing	Conditional	Indicator (check box)	Applicable only to options with repricing dates and defaults to *Yes*. If changed to *No*, the loan's Repricing Date will not be considered when calculating Actual Due Date for this loan. If *Yes*, Actual Due Date will be set equal to loan's Repricing Date, when Repricing Date falls prior to due date that would be calculated otherwise.
Interest Due Upon Principal Payment	Conditional	Indicator (check box)	Applicable only if option is not Match-funded and defaults to *No*. If checked *Yes*, interest is payable on the interest due date unless loan is being repaid prior to the due date, in which case the interest is due on the effective date of the prepayment.
Fee on Lender Shares Due At Funding	Conditional	Indicator (Check Box)	Applicable only to SBLC Interest Pricing Option and defaults to *No*. Note: User may modify to *Yes*, indicating that Issuance Rate Fee payment is due at L/C Funding Date but there is no behavior associated with setting the indicator.
Reference Banks Apply	Conditional	Indicator	Required if pricing option is *Match-funded*, else not

		(Check Box)	applicable. Defaults to *No* (not checked). User can override to *Yes* (checked).
Automatic Notices – Applies to all Pricing Options			
Rate Change	Optional	Indicator (Check box)	Beginning with Release 5.5 and forward, the following functionality applies: Defaults to *No* (unchecked). Rate Setting Notices (for borrowers and lenders) will be automatically generated by batch under the following conditions: If the base rate for a funding desk is changed (in the Treasury), and the **Rate Change** indicator is set to *Yes* (checked), then Rate Change Notices. If the base rate is changed for an outstanding (from the Outstanding Notebook), and the **Rate Change** indicator is set to *Yes* (checked), and users click *Yes* to the warning (after the rate has been changed). Once notices are created, an event (*Rate Change Notices Generated*) is created on the Events tab of the Loan Notebook.
Schedule Change	Optional	Indicator (Check box)	Beginning with Release 5.5 and forward, the following functionality applies: Defaults to *No* (unchecked). If set to *Yes* (checked), automatically generates Schedule Change Notices (for borrowers and lenders) and changes (resynchronizes) Loan Repayment Schedule on active loans. Notices are not produced if the repayment schedule has a status of *Needs Review*. If a Rate Change has caused the schedule to be automatically changed, both a Rate Change Notice and a Schedule Change Notice are produced.
Rate Setting	Optional	Indicator (Check box)	Beginning with Release 5.5 and forward, the following functionality applies: Defaults to *No* (unchecked). If set to *Yes* (checked), automatically generates Rate Setting Notices (for borrowers and lenders) for automatically generated Quick Loan Repricings that have a status of *Awaiting Release, Awaiting Auto Release,* and *awaiting Approval*. Notices are automatically generated based on the Quick Loan Repricing Effective Date and the setup (processing area, number of lead days, and generated status) set for the Quick Loan Repricing in the **Automated Transactions** table in **Table Maintenance**. Once notices are created, an event (*Rate Setting Notices Generated*) is created on the Events tab of the Quick Loan Repricing Notebook. Users also have ability to manually request Rate Setting Notices from within the Loan Notebook in the event that a rate change is entered manually.
Number of Days to Treasury Review	Conditional	Table: Pricing Option Name	Applicable only to match-funded pricing options or to non-match funded pricing options that are coded or Match Funded Overrideable. If enabled, defaults to value associated with selected Pricing Option Name Table and may be overridden. Allowable

			values are *0* thru *999*. Notes: **T**he number of days entered is used to calculate the treasury review date of a match-funded item. Only those match-funded items where the effective date less the Number of Days to Treasury Review is less than or equal to the Target Date of Treasury Review will appear on the *Treasury Review* window. Days are calculated in terms of valid business days. Business Date calculations are based on selected calendars for new loans where the **Interest Rate Setting of Funds** indicator has been checked on the *Holiday Calendar Select* window.
Intent Notice - Applies to all Pricing Options			
Days in Advance	Required	Table: Pricing Option Name	Values are numbers *0* - *99*. Defaults to *Default Intent Notice Days* from **Pricing Option Name** table. Valid values are *0* - *99*. Indicates the number of business days prior to release of the outstanding on which the Intent Notices should be sent.
Time	Required	Time	Valid values are *1* through *12*. Defaults to *12*.
AM/PM	Required	Indicator	Default to *PM*, user can override to *AM*.
Rate Setting Notice - Applicable only if the **Borrower Rate Floats** indicator for selected pricing option (in GTM) is set to *No* (unchecked), indicating that the borrower rate does not float, but must be fixed (via the Rate Setting Procedure). Rate Setting Notices are sent out after Intent Notices, so Rate Setting Date/Time must occur on or after the Date/Time specified for the Intent Notice.			
Days in Advance	Conditional	Table: Pricing Option Name	If matched funded, defaults to *Default Rate Setting Days* from the **Pricing Option Name** table, else not applicable. Valid values are numbers *0* - *99*. Indicates the number of business days prior to release of the outstanding on which the Rate Setting Notices should be sent.
Time	Conditional	Time	If match funded, defaults to *12*, else not applicable. Valid values are *1* thru *12*.
AM/PM	Required	Indicator	Default to *PM*, user can override to *AM*.
FX Rate Setting – Applies to All Pricing Options.			
Days in Advance	Required	Table: Pricing Option Name	Values are numbers *0* – *99*. The value defaults to *FX Rate Notice Days* from the **Pricing Option Name** table. Indicates number of business days prior to the release of the outstanding on which the F/X Rate Setting Notices should be sent.
Funding Allocation Details To Treasury Interface	Optional	Indicator	Available in release TBD, the following separately licensed Funding Allocation for Loans Using Facility Amortization Schedule functionality applies. Note: The following separate licenses must be activated for Funding Allocation for Loans Using Facility Amortization Schedule functionality: Remote Operations Event Management

			Exceptions Log The applicability of a loan for calculation of funding allocation details as per this functionality solely depends on the value of indicator Funding Allocation Details to Treasury Interface. A loan like outstanding will be considered for this functionality only if this indicator is turned on. The setting of the Funding Allocation Details To Treasury indicator together with the "Valid for Summit" attribute value at the outstanding notebook level Codes tab determines if the "Funding Allocation Details" are shared with the Treasury Interface in addition to the current XML messages. The default value is unchecked and can be modified before any outstanding is created in pending and released. The value of this indicator is modifiable via Deal Change Transaction, if Deal Change Transaction is applicable for Pricing Rules. The indicator is made available on all the pricing option names whose outstanding type attributes is loan or loan like. Whenever an outstanding is created in pending or released the indicator value is secured and cannot be modified. When all the outstandings under this deal are inactivated or no outstandings exist with this pricing option the value is unsecured and can be modified. The last value before creating an outstanding is the final value. When a loan conversion occurs through the Comprehensive Repricing notebook, the new loan takes the indicator value from this Deal level defined pricing option name window. Current functionality transmits the Loan IQ details to Summit through the MIS Codes value at loan level. This indicator governs only the sub element portion of "Funding Allocation Details" to include or not include the current function of XML messages. There is possibility the "Outstanding type" field value of "Pricing Option Name" code table can be modified. **Note:** If users modify this value, results are not defined and will be at the client risk to address.
CCY (Currency)	Conditional	Table: Currency	Defaults to the currency defined for the selected Pricing Option in the **Pricing Option Name** table, if any. If a currency has been defined for the selected option, it cannot be changed, except via the **Pricing Option Name** table in GTM where currency will have to be changed to *blank*. Note: If Pricing Option has a default currency set in GTM, subsequent outstandings created under this pricing can only be created in this currency (and the currency must be valid for the facility, else outstanding cannot be created).

			If no currency has been associated with the pricing option, currency on the *Pricing Rules* window defaults to *blank*. User can select from list of all available currencies or leave blank. If a currency is selected subsequent outstandings created under this pricing option must be in the chosen currency (and the currency must be valid for the facility, else outstanding cannot be created). Currency chosen on Pricing Options Details can be changed. If currency is blank, subsequent outstandings created under this option can be created in any allowable currency defined for the facility.
Adjusted Due Date Rule	Optional	2 digits (1-31)	Beginning with Release 6.0.09.08 and forward, as per the enhancement entitled Synchronized Billing at the Facility Level per Pricing Option, the following functionality applies: The value specified for the Adjusted Due Date Rule in the **Deal** Pricing Option flows down and is overrideable at the Facility level, if the client is separately licensed for Facility Pricing Rules. If no pricing rules are defined at the Facility level the value set in Adjusted Due Date Rule flows down to the individual Outstandings that are created under the pricing option, and are overrideable there. When the Deal Pricing Option is added or updated via a Deal Change transaction, the Adjusted Due Date Rule field is copied to the Deal Pricing Option when the transaction is released.
Interest Stabilization Spread Rounding Rules	Optional	Button	Available in Release 7.2 with the Enhanced Interest Stabilization enhancement. This Interest Stabilization spread is applicable to just the Interest Stabilization Spread in the Loan. Active for Pricing Options defined as Interest Stabilization Pricing Options in the Pricing Option Name Table. Opens the *Stabilization Spread Rounding Rules Editor* window. The default rounding rules are as follows: Spread Initial Fraction Rate: **N/A** Round: **Actual** Spread Round Decimal Precision: **3** Round: **Nearest** These default rounding rules can be manually overridden by users on the *Stabilization Spread Rounding Rules Editor* window. **Note**: The rounding rules set on the Interest Stabilization Spread Rounding Rules screen at Deal level (whether the default rounding rules or manually overridden rounding rules) always apply to the Interest Stabilization Spread set or calculated for an Enhanced Interest Stabilization loan under that Deal (while using the specified Interest Stabilization Pricing Option).
Bill Borrower	Required	Indicator	Defaults to *Yes* (checked), indicating interest on this option should be included when preparing

		(check Box)	borrower bills. If pricing option relates to any of the following: Intraday Loan, Banker's Acceptances, Bill of Exchange, Canadian BA, Deposit, or Discount Loan the default is *No* (Unchecked) and is not modifiable. **Note:** When the Bill Borrower indicator is unchecked for Ongoing Fees (in the Fee Pricing Rules section, Fee Pricing Rule window) or for SBLC Fees (in the Allowed Pricing Options section, Interest Pricing Option Detail SBLC window), and the Fee is set to "Pay in Advance" (on the General tab of the Ongoing Fee Notebook/SBLC Notebook), then the next accrual cycle is created during the batch execution of the day before the cycle Start Date so that the cycle is available on the Start Date. The Fee will appear on the cycle Start Date in the WIP and the Scheduled Activity Report for the Adjusted Due Date of the Fee (most often this will be the Start Date of the Fee but the date may be earlier or later if adjusted to fall on a valid business day as per the chosen Non Business Day rule.)
Anniversary Date Applies	Optional	Indicator (Checkbox)	Available in Release 7.2.7 with the **Anniversary Date** enhancement. The indicator is displayed only when the Pricing Option is one for which the *Repricing Date Applies* indicator has been checked in the Pricing Option Name. Defaults to *N* (unchecked) but can be modified. This field can also be updated in the Deal Change Transaction notebook.
Repricing Frequency	Conditional	Button	Available only for fixed rate interest pricing options (under which loans have repricing dates). Permits selection of Allowed Repricing Frequencies from all available repricing frequencies for the selected pricing option for any loans in the deal drawn under this pricing option. In the Loan Notebook, all available repricing frequencies will still be available for selection
Billing Number of Days	Required	3 digits	Indicates the number of days prior to Adjusted Due Date on which the bill will be prepared. Defaults to *10* days. May be modified (*zero* is a valid value) but cannot be negative. If the pricing option relates to any of the following: Intraday Loan, Banker's Acceptances, Bill of Exchange, Canadian BA, Deposit, or Discount Loan the default is *0* and is not modifiable.
Maximum Drawdown Amount	Required	System Amount Standard	Flows down from first pricing option found (if any other option exists). If modified, must be numeric and, if deal is closed, cannot exceed global deal current commitment. Cannot be less than the minimum drawdown amount, if minimum is defined.
Minimum Drawdown Amount	Required	System Amount Standard	Flows down from the first pricing option found (if any other option exists). If modified, must be numeric and, if the deal is closed, cannot exceed global deal current commitment. Cannot be greater then the maximum drawdown amount, if maximum is defined.

Minimum Payment Amount	Required	System Amount Standard	Flows down from the first pricing option found (if any other option exists). If modified, must be numeric and, if the deal is closed, cannot exceed global deal current commitment. Note: The System validates Principal Payments against the Minimum Payment Amounts.
Minimum Amount Multiples	Required	System Amount Standard	The Minimum Amount Multiple refers to the amount of a principal payment and how it affects the projected remaining amount of the loan. If after the payment is made, the remaining amount of the loan is not a multiple of the Minimum Amount Multiple number, a warning is issued, stating that the loan projected amount will not be a multiple of the minimum multiple number. This warning can be overridden. Defaults to *0.01*. Must be numeric and, if deal is closed cannot exceed global deal current commitment.
Minimum Lender Share Multiples	Conditional	System Amount Standard	Applicable only to Bills of Exchange and Canadian BA's, and defaults to *0.01*. Must be numeric and, if the deal is closed cannot exceed global deal current commitment.
Reserve Asset Cost: The following fields have been added to support the Reserve Asset Cost (RAC) spread required in Europe in support of Central Bank margin requirements. Available for Loans Only.			
RAC Reference Banks Apply	Optional	Indicator (check Box)	If *Yes* (checked), RAC Reference Banks, defined on the Bank Rules tab, will appear in any subsequent loan created under this pricing option at the time of rate selection.
RAC Repricing Frequency Max	Optional		Defaults to *None*, in which case the RAC repricing frequency will be the same as the loan.
RAC Initial Fraction Rate	Required	List of valid Fractional Rates	Defaults to *1/8*. User may select another value from list of valid values (*1/2*, *1/4*, *1/8*, *1/16*, *1/32* and *1/100*).
Round	Required	List of valid Rounding Directions	Defaults to *Nearest*. User may select another value from list of valid values: (*Up, Down, Nearest, Actual*) Note: If *Actual* is selected, indicating no rounding is desired, then the Initial Fraction Rate defaults to *N/A* and is protected.
RAC Round Decimal Precision	Required	List of Valid Decimal Places	Defaults to *3*. User may select another valid value from list of valid values (*2,3,4,5*).
Round	Required	List of valid Rounding Directions	Defaults to *Nearest*. User may select another value from list of valid values (*Up, Down, Nearest, Actual*). Note: If *Actual* is selected, indicating no rounding is desired, then the Rounding Decimal Precision defaults to *N/A* and is protected.

Pricing Rules Tab – Indicators

Attribute	Req/Opt	Size/Format	Rules
Consolidated Billing	Required	Indicator (check box)	Defaults to *Yes*, (consolidated bill will be produced). User may override to *No*. Available in Release 7.2.6 the separately licensed

			Multiple Repayment Methods Under a Consolidated Bill functionality applies. **Note:** When the license for Multiple Repayment Methods Under a Consolidated Bill functionality is activated this indicator is not available.
Consolidation Type	Optional	List Box	Available in Release 7.2.6 the separately licensed Multiple Repayment Methods Under a Consolidated Bill functionality applies. This drop down is only available when the license is activated. Defaults to *Unconsolidated*. This value flows down to Facility level when Facility is created first time. After this any changes made at the Deal level do not affect the value at Facility level. User may modify to *Borrower, Deal, or Facility*. Unconsolidated = Produces unconsolidated bills as in separate bills for all deal level Admin fees, Event fees. This is the Consolidation Type default. Borrower = Consolidates bills for the deal by Borrower. Choosing the Borrower option consolidates bills for this deal along with all other deals which belong to the same borrower (along with similar consolidation criteria) and which have the Borrower option selected in Consolidation Type dropdown. Deal = Choosing the Deal option consolidates bills by deal (current functionality) Facility = The Consolidation Type Facility is made available at the deal level to facilitate the flow of the same Consolidation Type to all the facilities created under this deal. The value of Consolidation Type drop down at a newly created facility defaults to value selected at deal level. Note: All the deal level billable items are still in a separate bill. Bills for admin fees and event fee payments owned by deals are consolidated based on the deal level consolidation type. **Note:** New events are captured in the Event tab of relevant notebooks whenever the value for Consolidation Type dropdown is changed. Example: if the consolidation type at Flex Schedule Item level is changed then relevant events are captured in the Events tab of Outstanding notebook.
Reserve Adjusted Rates	Required	Indicator (check box)	Defaults to *No* (unchecked). User may override to *Yes* (checked). **Note:** At the present time, no Loan IQ functionality is tied to this indicator.
Autocharge Prepayment Penalty Fees	Required	Indicator (check box)	Beginning with Release 5.5 and forward, the following functionality applies: Defaults to *No* (unchecked). This indicator determines whether or not prepayment penalty fees will be automatically created and billed for any Loan. The value flows down to the Loan Notebook (Codes Page, **Billing/Late Charges Rules** button) where it can be overridden. **Note:** The Prepayment Penalty Event Fee

			transaction will not automatically be created where the parameters governing its creation (for example, Deal Template, Facility Pricing) do not exist.
Autochange to Non-Performing Status	Optional	Indicator (check box)	Beginning with Release 5.5 and forward, the following functionality applies: Defaults to *No* (unchecked). May be changed to *Yes* (checked) by selecting **Accounting** → **Auto Change to Non-Performing Status** in the Deal Notebook.
Past Due Based on Billed	Optional	Indicator (check box)	Beginning with Release 5.5 and forward, the following functionality applies: Defaults to *No* (unchecked) but may be changed to *Yes* (checked). This indicator: Determines how past due amounts will be calculated for all of the loans and all of the fees (including Admin Fees) that belong to a Deal. Controls whether or not corrected bills will be produced by the nightly batch billing process. Interacts with (and sometimes controls) the setting of various Bill Borrower indicators. If set to *Yes*, then: The calculation of past due for that Deal is based upon Billed amounts. All the relevant **Bill Borrower** indicators in that Deal (in the Deal Pricing Rules for both Allowable Pricing options and Fee Pricing Rules, individual Admin Fees, individual Facility Amortization Schedules, and individual loans belonging to that Deal) and are also set to *Yes* and are protected. The batch process that produces the regularly scheduled bills will not produce any corrected bills for that deal. If set to *No* then The various **Bill Borrower** indicators will still default to *Yes*, but the user may modify them as applicable at any time. There is no interaction between this indicator and the various **Bill Borrower** indicators throughout the deal. The various **Bill Borrower** indicators default to *Yes* wherever they occur, and the user may modify them as applicable at any time. Beginning with Release 6.0.09.02 and forward, corrected bills can be generated online. If "Past Due Based On Billed" is turned on, then on regeneration of a bill, Loan IQ displays a warning if subsequent bills (for later billing periods) exist. The warning states that subsequent bills exist and may need to be regenerated also.
Include in XML Bill	Required	Indicator (check box)	Available in Release 7.3, when licensed for **Modification to Bills Based on Contact Addresses and Co-Borrower**, the following functionality applies.

			The Include in XML Bill indicator is a required indicator, set to “N” for all pre-existing Deals. When a deal is created, this indicator defaults based on the XMLBD system parameter. Thereafter, until the deal has been approved, changes to the deal's department, branch or sole lender status causes this indicator to be reset based on the XMLBD system parameter. A warning is displayed at save: “Department, branch or sole lender status has changed. Include in XML Bill will be reset to the default. After a deal has been approved, such changes no longer affect the setting of this indicator except as stated below. Subsequent changes to data in the deal (Deal branch, Deal department, sole lender status, Deal currency, Deal Processing Area) cause these defaults to be reset in the background without any warning. Loan IQ looks for matching rows in Feature and script association table to default a value and if there is no matching row the default value is based on system parameter. If users change the values (example: Default Indicator value toggled from N to Y or vice versa) that is returned by extended system parameters under the same criteria. Those new values are used when setting the defaults for any new deals that meet the same criteria. Those new values do not affect any deals that already exist, except as stated above when certain values in the deal are changed. Note: The Include in XML Bill indicator is not add to any change transaction.
Do Not Print	Required	Indicator (check box)	Available in Release 7.3, when licensed for **Modification to Bills Based on Contact Addresses and Co-Borrower**, the following functionality applies. The Do Not Print indicator default, when a new deal is created, is set to"N" but can be changed. If this indicator is checked and passed to the outside billing system, the billing system does not generate a Bill. Note: The Do Not Print and Do Not Mail indicators cannot both be checked at the same time.
Do Not Mail	Required	Indicator (check box)	Available in Release 7.3, when licensed for **Modification to Bills Based on Contact Addresses and Co-Borrower**, the following functionality applies. The Do Not Mail indicator default, when a new deal is created, is set to"N" but can be changed. If this indicator is checked and passed to the outside billing system, the billing system does generate a Bill, however, the outside billing system parameter table determines if the image goes to the image system and if the statement gets printed and sent to the appropriate Loan Center. Note: The Do Not Print and Do Not Mail indicators cannot both be checked at the same time.

Bill Care Of Contact	Optional	Indicator (check box)	Available in Release 7.3.1, when licensed for **CO Address On Billing**, the following functionality applies. The Bill Care Of Contact indicator default, when a new deal is created, is set to "N" but can be changed. This indicator allows the bank to send a bill to a separate third party 'Care Of' address whilst including the legal name and address of the primary borrower on the same bill.
Circle Settlement	Required	List Box	Defaults to *Actual*. User may modify to *Flat*. Actual = When an assignment is done during an Interest or Fee period, the agent will pay the seller all Interest/Fees due prior to circle settlement day and will pay the buyer for all Interest/Fees due after circle settlement. Flat = When an assignment is done during an interest or fee periods, the agent will pay the buyer all Interest/Fees due for the entire period.
Grace Period	Required	5 digits	Defaults to zero. Defines the number of days after which an interest or principal payment will be considered past due for the purposes of assessing a default penalty spread. Note: Deal Grace Period should not be confused with the General Ledger Grace Period, found on the **Branch** table, that defines the number of days after the first of a new month during which G/L entries may still be posted "as-of" the prior month.

Fee Pricing Rules: Multiple Fee Pricing Rules may be defined for **Ongoing Fees.** User may click on the **Add Fee** button to bring up the *Fee Pricing Rules Select* window. User may also click on the **Delete Fee** button to delete a Fee Pricing Type. Fee Type may **not** be deleted if it is referenced in any Facility or Deal Ongoing Fee Pricing Text.

Available in Release 7.3.1.14 and later

Bill of Exchange Acceptance Fee – Fee Type Options

The Pricing Rules functionality is updated to make available the user defined fee types under the **Bill of Exchange Acceptance** Fee Category as a Pricing Fee type option when adding a **Fee Pricing** type to define pricing rules for a Facility. It creates the appropriate pricing for the facility. The Bill of Exchange Acceptance Fees does not create any ongoing fee objects for the facility.

Note: The codes Bill of Exchange Preparation (BXPRP) and Bill of Exchange Rollover (BXRLV) pricing fee types in the Bill of Exchange Acceptance Fee category are restricted to be added at Facility level, therefore will not available in the Deal.

Fee Pricing Rules Details Window

Attribute	Req/Opt	Size/Format	Rules
Facility Ongoing Fees	Optional	Radio button	Available in Release 7.2.7, the separately licensed Accruing Fees at the Outstanding Level functionality applies. Default is selected checked. If the button is selected then only Facility Ongoing Fees (ONG) are displayed in the Fee drop-down

			box.
Outstanding Ongoing Fees	Optional	Radio button	Available in Release 7.2.7, the separately licensed Accruing Fees at the Outstanding Level functionality applies. If the button is selected then only Outstanding Ongoing Fees (OONG) are displayed in the Fee drop-down box.
Fee	Required	Table: Ongoing Fee Types	No default. Select one value from list of (active) ongoing fee types. Available in Release 7.3.1, the separately licensed VAT Assessments Due from Borrower on Interest and Fees enhancement: A new column *Fee Liable for VAT* column is added. To indicate the new VAT status of each Fee it is required that a new marker/identifier e.g. "Fee liable for VAT" should be displayed both on instances of the individual Fee notebook as appropriate and as a new column within either the Event Fee Template section NOT updatable Notes: Cannot delete a Fee Pricing Rule if Facility or Deal Ongoing Fee Pricing Text references that Fee Type. Only fee types that have been defined as Ongoing Fees (in the Pricing Fee Type table in Table Maintenance) will be presented for user selection.
Matrix Change Application Method	Required	Table: Matrix Change Method	Defaults to *Effective date of change*. User may select another valid value from list of (active) matrix change application methods. Defines how and when a spread change will be applied to existing fees. Effective Date of Change - New fee rate will take affect as of the effective date of the matrix change. Start of Current Cycle - new fee rate will take effect as of the beginning of the current fee cycle (and the current cycle will re-accrue) Start of Next Cycle - new fee rate will not take effect until the next fee accrual cycle starts.
Non-Business Day Rule	Required	Table: Non-Business Day	Default is based on the system parameter, **BDRUL**. User may select another valid value from list of (active) codes (SAME Date, Next Business Day, Previous Business Day, Modified Following Business Day, Modified Previous Business Day).
Interest is Compounded	Optional	Indicator (check box)	Available beginning as a patch to Release 6.0.08.08, the following separately licensed functionality, Accrual Changes to Outstandings, applies. Defaults to indicator setting based on system parameter **CMPIA** (Compounded Interest Accrual). The system parameter applies to the setting of this indicator when the Fee Pricing

			Rule is first added to the Deal Pricing Rules. If **CMPIA** is set to *N*, then the Interest is Compounded indicator defaults to *N*, which means the pricing options default to simple interest. If **CMPIA** is set to *Y*, then the Interest is Compounded indicator defaults to *Y*, which means the pricing options default to compounded interest. If this indicator is checked, the accruals for the fee will be compounded. If the indicator is unchecked, the accruals for the fee will be simple. If the setting of the indicator is changed it applies only to pending fees (when released) and will not affect any released fees. This indicator cannot be overridden in the Facility level pricing rules.
Bill Borrower	Required	Indicator (check box)	Defaults to *Yes* (checked), indicating this fee should be included when preparing borrower bills. Available in Release 7.2.7, the separately licensed *Accruing Fees at the Outstanding Level functionality* applies. If the Never Bill indicator is set in the Pricing Fee Type table for the selected fee type, the Bill Borrower indicator in the fee pricing rule is set to *No* (unchecked) and protected regardless of the value of Past Due Based on Billed.
Billing Number of Days	Required	3 digits	Indicates the number of days prior to Adjusted Due Date on which the bill will be prepared. Defaults to *10* days. May be modified (*zero* is a valid value) but cannot be negative.

Deal Messaging Tab

Beginning with Release 6.0.08.08 (Patch), the following separately licensed Markit Clear Inventory Messages functionality applies:

This tab hosts information that cannot be available in Loan IQ but needs to be passed via Markit Clear Inventory messages.

Attribute	Req/Opt	Size/Format	Rules
Syndication Lender	Optional	Button	Allows the user to select a customer with a completed **lender** profile. When selected, Loan IQ customer select window will open for the user to select an existing customer. Syndication Lender button will turn blue once a lender is selected. When the field is blank, this element will not available in the Markit message.
Restrictions Section: Pro-Rata			
Facilities	Optional	Button	Available to allow the user to select multiple

			facilities that are currently setup under the deal. The default value is blank. When selected, a Facility List window opens with all active facilities available in the deal. The user is able to select multiple facilities from the Facility list. CUSIP and/or ISIN of the selected facility and facility name is displayed on the screen. When the field is blank, this element will not available in the Markit message.
Restrictions Section: Industry			
SICs	Optional	Button	When selected, Select SICs window opens to allow the user to select multiple SIC codes. The default value is blank. The NAICS code mapped to the selected SIC codes will be displayed on the screen. When the field is blank, this element will not available in the Markit message.
Restrictions Section: Jurisdiction			
Jurisdictions	Optional	Button	When selected, Loan IQ brings up all active values defined in the Jurisdiction Code Table for the user to select multiple jurisdiction codes. The default value is blank. Selected jurisdiction codes will be displayed on the screen. When the field is blank, this element will not available in the Markit message.
Restrictions Section: Restricted Parties			
Restricted Parties	Optional	List Box	The list box contains Add and Delete buttons. Allows the user to enter multiple customer MEIs. The default is blank. **Add button**: When Add button is pressed, a text box opens to allow the user enter one MEI at a time. The entered MEI will be added in the text box after the Enter button is pressed. **Delete button**: Highlight a MEI then press the Delete button to remove the selected MEI from the Restricted Parties List.
Primary Consent	Optional	Drop down list	Available values: Pre Approve In Bulk, and Individual Approval. The default value is blank. When the field is blank, this element will not available in the Markit message.
Restrictions Section: Assignment Fee Discount Rules			
Add	Optional	Button	Allows the user to set multiple tiers of discount rules for the assignment fees. When selected, a Discount Rule window opens with two fields: Knock in Number and Discount. In the following scenarios, this element is not available in the Markit: Assignment recordation fee outside the bank group

			is not setup at the Deal –Admin/Event Fees tab Assignment recordation fee outside the bank group is set up as a percentage Knock in Number: Positive integer and cannot be 0. Discount: Discount in the **currency of the assignment recordation fee**. Cannot be greater than the defined deal assignment recordation fee outside bank group Add button: When button is pressed, a window opens to allow the user enter one discount rule at a time. The entered discount rule will be added in the box after the Enter button is pressed. Delete button: Highlight a discount rule then press the Delete button to remove the selected rule from the Assignment Fee Discount Rules List.
Allocate Interest	Optional	Drop down list	Available values: Pro Rata Share, and Facility Position. Default value: Pro Rata Share
Services	Optional	Indicator (Check Box)	Three boxes available: Inventory, Reconciliation, and Trade Closing. Inventory and Trade Closing are defaulted to Checked and Reconciliation is defaulted to Unchecked. These checkboxes (Inventory, Reconciliation and Trade Closing) may be modified.

Deal – File Menu

The following options are available from the Deal File Menu

Open

Save

Delete

Drop in Folder

Print Deal Report

Save As

Exit

Open

Opens the *Deal Select* window, allowing access to an existing deal or creation of a new one.

Save

Saves the Deal Notebook.

Delete

Deletes Pending Deals only.

Note: A Deal cannot be deleted if a Guarantor exists, if Cashflow already exists, or if Pending General Ledger entries exist.

Drop in Folder

Drops the open Deal Notebook into the users Desktop Deal Folder, if the **Drop in Folder** checkbox was unchecked on the *Deal Create* window.

Save As

When selecting **File > Save As**, the current Deal Select window appears in *New Deal* mode. The user must enter the following information:

Pending Host Bank/Closed Non-Host Bank deal

Deal Name

Alias

Tracking Number

Alternate ID

ANSI ID

Users will effectively be able to copy a deal, and amend it to create a new unique deal. This eliminates the need to recreate from scratch a new deal that is similar to another existing deal. Deal and facility amounts and dates, circle and borrower information, as well as bank roles will be required re-entries for the copied deal, but items like facility names and types, pricing matrices (but

these will need to be updated accordingly), pricing options, ongoing fees and currency will be retained.

Note: When copying a Deal via Deal Notebook/File Menu/Save As, which has simple formula fee/interest pricing or matrix pricing, an informational message will be raised letting user know that pricing was copied and that user should verify that all pricing options exist in the Deal Notebook.

The **Save As** functionality is available for both Pending and Closed Deals

The following items are preserved on the Deal Select Window, but may be changed:

Currency, Department, Department Subtype (separately licensed) Sales Groups

In the Deal Notebook, the following information is preserved:

Admin Agent (and associated information, not including Preferred Remittance Instructions), Deal Alias, Deal Sole Lender Indicator status, Currency, Department, Department Subtype (separately licensed) Sales Groups, Deal Personnel, Community Reinvestment Act Indicator status, Deal Create Event, OK to Fund Indicator status, Maximum Number of Loans, Maximum Number of Match Funded Loans, Euro Interim Rounding Rule Decimal Places, MIS Codes, Owning Branch, Processing Area, Accounting Enabled Indicator status, Tracking number, ANSI ID, Alternate ID, Holiday Calendars, Admin Fees, Event Fee Templates, Ongoing Fee Pricing, Upfront Fee Pricing, Interest Pricing Options, Consolidated Billing Indicator status, Reserve Adjusted Rates Indicator status, Circle Settlement, Grace Period, Fee Pricing Rules.

Beginning with Release 6.0.09.02 and forward, the Save as transaction provides more comprehensive information for the Save as Menu option:

Summary Tab Data - Limited to:

Borrower/Depositor Data

Deal Classification

Administrative Agent

MIS Codes Tab Data

Bank Roles

Calendars Tab Data

Ratios and Conditions Tab Data

Pricing Rules Tab Data

In the Facility Notebook, the following information is preserved:

Facility Name, Facility Type, Facility Currency, Facility Multi Currency Ind status, Facility Main Servicing Group, Loan Repricing FX tolerance, ANSI ID, Bank, Department, Department Subtype (separately licensed) Owning Branch, Funding Desk, Processing Area, Community Re-Investment Act Ind status, Single Draw Only Ind status, Auto Transfer to Non Accrual Ind status, Compensating Balances Required Ind status, Material Adverse Change Clause Ind status, Clean Up Periods, Multiple Draws, MIS Codes, Ongoing Fee Pricing, Interest Pricing, All Penalty Spread information except History.

Beginning with Release 6.0.09.02 and forward, the Save as transaction provides more comprehensive information for the Save as Menu option:

Types/Purpose Tab Data

Sublimit/Customer Tab Data

Risk Tab Data

Restrictions Tab

MIS Codes Data – includes both MIS codes and values

The following rules apply to Deal and Facility:

If the facility and sub-limit information is not copied then it is not populated on the Borrower/depositor tab.

If Risk Types are not copied then Borrower information can not be copied.

'Deal Save as' does not copy currency limits under the Borrower unless facility currency limits are also copied.

A warning is produced by Loan IQ that the Borrower is not being copied because no risk type or sublimit used by this Borrower was copied

The 'Deal Save As' transaction copies over all limit amounts with a value of float. These fields have to be set afterwards and do not contain previous deal/facility values.

Exit

Closes the open Deal Notebook. If the deal has been modified, it will prompt the user to save the changes before closing.

Deal – Options Menu

Most Deal Options create **events,** and each event carries both an actual Create Date and an Effective Date. **The Create Date, and in most cases, the Effective Date of an event may not be changed**. (The Deal Options on which the Effective Date may be changed subject to appropriate validation (by double-clicking on the selected event and entering a new effective date, or selecting the **Effective Date** button) are highlighted in the following list.

The following deal actions are accessible to **Host Bank Deals:**

Update

Update option locks the deal, places shared lock on the Time Zone associated with the Deal's Owning Branch and removes the protection from all other Deal Options available to the user based on User Profile. Deal must be in *Update* mode in order to select any other Deal Option that will update the deal. In addition, users who are authorized to Update the Notebook will gain access to **all** of the fields in the Deal Notebook whenever the **Update** option is selected.

Users with authority to perform the **Update** option but who are not authorized to Update the Notebook will be limited to choosing options from the menu that they are authorized to perform. They will not be given overall update access to the Deal Notebook itself.

Note: Deal may be placed in *Update* mode by selecting the **Update** option or by selecting **F7** or the **Inquiry/Update Mode** button accessible from every tab of the Deal Notebook.

Inquiry

This Option is always available to switch the user out of *Update* mode, and returns the Deal to display only.

Auto-Charge/Auto-Gen/Auto-Release

Available in Release 7.3.0.2, when licensed for **Enhance Incoming Payment Processing**, the following functionality applies.

The existing 'Auto-Gen / Auto-Release' item on the Options menu in the Deal notebook is renamed to 'Auto-Charge / Auto-Gen / Auto-Release'. The menu item label is not dynamic and always displays with this new label when a user bank is licensed for Auto Charge.

Beginning with Release 6.0.09.11 and forward, the following separately licensed *Override Automated Transactions Settings* functionality is available.

This option is available to clients separately licensed for Override Automated Transactions Settings and when system parameter **OATSG** set to *Y*.

Details of Auto-Charge/Auto-Gen/Auto-Release Window

The Auto-Gen and Auto-Release, Automatable Transaction and Override indicators may be changed from this window when the Facility Notebook is in Update Mode.

The Deal Auto-Gen and Auto-Release indicators will default based on the **AGARD** system parameter and the branch of the Deal.

Field Name	Req/Opts	Size/Format	Rules
Lists all the automatable transactions which may be or have been overridden. Available in Release 7.3.0.2, when licensed for **Enhance Incoming Payment Processing**, the following functionality applies. A new label 'Auto-Charge Supported' is added at the top of the window, together with the Enable Auto-Gen and Enable Auto-Release check boxes. This new label is display only and displays the current setting of the system parameter SACHG. Note: If the system parameter SACHG is changed from on to off, while it remains off: Auto-Charge for any of the relevant transaction types in the Deal notebook is allowed to be turned off where the transaction type is currently on Auto-Charge for any of the relevant transaction types in the Deal notebook is not allowed to be turned on where the transaction type is currently off (Payment transactions are still auto-charged until auto-charge is turned off for the relevant transaction type)			
Enable Auto-Gen	Optional	Checkbox	When selected, enables Auto-Gen for that automatable transaction at Deal level. User may use this option to toggle between disabling and enabling the Auto-Gen functionality for all the transactions of a specific Deal.
Enable Auto-Release	Optional	Checkbox	When selected, enables Auto-Release for that automatable transaction at Deal level. User may use this option to toggle between disabling and enabling the Auto-Release functionality for all the transactions of a specific Deal.
Transaction Type	System Generated	N/A	Displays automated transaction type.
Auto Generate	System Generated	Yes/No drop-down menu	Select *Y* to set Auto-Generate to Yes. Select *N* to set Auto-Generate to No.
Lead	System Generated	Numeric Value (0-99)	Indicates the number of lead days.
Generated Status	System Generated	Drop-down menu	Displays automated transaction generated status. For example, Awaiting Approval, Awaiting Auto-Release, etc.
Auto Release	System Generated	Yes/No drop-down menu	Select *Y* to set Auto-Release to Yes. Select *N* to set Auto-Release to No.
Fees Excluded	Optional	Indicator	Available in Release 7.3.0.2, when licensed for **Enhance Incoming Payment Processing**, the following functionality applies. This column is available only for licensed users. This column in the Automated Transaction Editor indicates when any fee types have been excluded from Auto Charge for a particular transaction

			type (at the relevant level). This indicator is 'N' (default) or 'Y' and is based on the setting of the Auto Charge checkbox. Unchecked = 'N', Checked = 'Y'.
Auto Charge	Optional	Checkbox	Available in Release 7.3.0.2, when licensed for **Enhance Incoming Payment Processing**, the following functionality applies. This column is available only for licensed users. The initial setting for all automatable transactions under Auto Charge is "N". This column is updateable only for any automatable transaction that has the new 'Supports Auto-Charge' indicator set to 'Y' in the Automatable Transaction code table. It is updatable even if the Override indicator is not checked. However, setting Auto-Charge column to 'Y' automatically sets the Override indicator to checked. With the new Auto Charge column in the Automated Transactions Editor, user banks are able to ensure four (4) distinct outcomes for a deal that supports auto charge: Leave Auto Charge disabled for all transaction types and effectively suppress auto charge Enable Auto Charge for a limited number of transaction types Enable Auto Charge for only one type of transaction Enable Auto Charge explicitly for all transaction types for which Auto Charge is allowed Not all automatable transactions can be subject to auto charge. The payment transaction types in a deal that are available under auto charge functionality are as follows: Interest Payments (for loans) Principal Payments (for loans) Ongoing Fee Payments at facility level Ongoing Fee Payments at outstanding level Accruing Admin Fee Payments at deal level Amortizing Admin Fee Payments at deal level Recurring Event Fee Payments (where the borrower, and not a third party, is making the payment) Escrow Payments from Borrower Late Charge Payments SBLC Fee Payments When the Auto Charge is checked the Excluded Fee Types button is enabled. Note: When Auto-Charge is 'Y', the auto-gen and

			auto-release columns can be set to 'Y'. However, for any payment transaction for which Auto-Charge is turned on, Loan IQ ignores the settings for the auto-gen and auto-release, and auto-generates and auto-releases these transactions based on the auto-charge functionality in this enhancement. The only case in which the auto-gen and auto-release indicators are used when the auto-charge is turned on for a payment transaction is in the case of ongoing fees and recurring event fees. In that case, the auto-gen and auto-release indicators still apply to any fees where the fee type is specifically excluded from auto-charge.
Override	Optional	Checkbox	Indicates whether to override the automated transaction. Any overrides are saved with the Deal as the owner.
Excluded Fee Types	Optional	Button	Available in Release 7.3.0.2, when licensed for **Enhance Incoming Payment Processing**, the following functionality applies. This button is available at Deal level when the **selected row** is an ongoing fee payment transaction or a recurring event fee payment transaction. Opens the Fee Types to be Excluded from Auto-Charge Selection List window. This window enables users to select fees to be excluded from auto-charge. Checking a Fee Type listed in the Available pane moves the fee to the Selected pane. Check All/Uncheck All buttons are provided to Check/Uncheck All Fee Types. Clicking OK returns the Automated Transactions Editor window. The Fees Excluded column is changed to 'Y' for all selected Fee Types. **Note:** Loan IQ allows users to exclude any active fee type on the Pricing Fee Type code table from Auto Charge and keeps this exclusion even after the specific fee has become inactive until the user explicitly removes it from the selected list. Some fees in Loan IQ may be set up such that they are never billed. Any fee that is not billed will not be subject to Auto Charge. However, user banks do have the ability to turn off the instruction to never bill a particular fee, and at that point is it possible for the fee to be subject to Auto Charge. The decision to exclude a particular fee from Auto Charge is made independently from the decision to ensure the fee is never billed. If a fee is excluded from Auto Charge then it will be excluded even when users have turned off the never bill instruction. Fee types set up on the Pricing Fee Type table as Never Bill are never billed. Therefore, all 'never bill" fee types are always considered to be excluded from auto-charge, as only fee payment transactions which are

			billed can be auto-charged. In addition, to provide users with the capability to exclude other “billed” fee types that might appear under a deal from auto charge functionality via system configurability, the Feature and Feature and Script Association code tables are modified. Please see System Parameter help for details.
Preferred Remittance Instructions	Optional	Button	Available in Release 7.3.0.2, when licensed for **Enhance Incoming Payment Processing**, the following functionality applies. Provides the user with the ability to link to relevant window needed to define preferred remittance instructions. This button links users to the Outstanding Servicing Group Details if the active window is at the outstanding level, links to borrower servicing group details at the facility level if Override Borrower Servicing Group at Facility and Outstanding functionality is licensed and only one borrower is defined, and otherwise links to the servicing group details window for the Deal borrower where the user in Loan IQ can initiate the process of setting preferred remittance instructions. If multiple borrowers are defined at the deal and or facility level (relevant only when Override Borrower Servicing Group at Facility and Outstanding functionality is licensed), users first select the relevant borrower servicing group then proceeds to the servicing group details window where the preferred remittance instructions can be updated. The ability to add a new remittance instruction remains in the Customer notebook, but once added users can tag a preferred instruction as needed. Validation of the required set up for remittance instructions when using Auto Charge only occurs in the Automated Transactions Editor and is not done while defining preferred remittance instructions.

Auto Charge requirements:

Auto Charge can only be enabled if the following conditions are met:

User Bank is licensed for Enhanced Incoming Payments Processing.

User Bank is licensed for Auto Gen/Auto Release Override at Deal/Facility/Outstanding Level.

Applicable remittance instruction is ACH/DDA.

Past Due Based on Billed indicator turned on at Deal Level.

Applicable remittance instruction applies to payments From borrower - DDA or ACH. For Auto Charge, the applicable remittance instruction must be for a payment From the borrower; Auto Charge does not process outgoing funds to the borrower.

Applicable remittance instruction must always be an approved remittance instruction (implicit) .

Applicable remittance instruction must be associated with a borrower where the borrower indicator is turned on (not just the depositor indicator) for decisions at the deal or facility level. At the outstanding level this validation is redundant as there is already a valid borrower.

Only one valid approved applicable remittance instructions applies under the rules defined by the new system parameter, *ACPRI - Auto Charge Requires Preferred Remittance Instructions*.

These conditions must always be met before Auto Charge can be enabled in the Automated Transactions Editor.

Auto Charge validation:

Steps followed to determine which remittance instructions apply by default to a particular cashflow:

If preferred remittance instructions have been specified and there is only a single borrower instruction that is valid for the relevant balance type/currency, then that instruction is used.

If there is not a valid preferred remittance instruction for that balance type/currency and borrower, and there is only a single borrower servicing group level instruction for that balance type, that instruction is used.

Otherwise, if there is a borrower servicing group level instruction marked as the standard remittance instruction and it is valid for that balance type/currency, then that instruction is used

A new system parameter, *ACPRI - Auto Charge Requires Preferred Remittance Instructions*, determines whether the applicable remittance instruction for Auto Charge must always be a preferred remittance instruction or if the default remittance instruction applies. Please see System Parameter help for more details.

In Loan IQ, preferred remittance instructions are set at the Deal level for each borrower, location, and servicing group. Some user banks may be licensed to set preferred remittance instructions for a given borrower/location/servicing group at the outstanding level. Additional flexibility is introduced which allows licensed user banks to override the borrower/location/servicing group and preferred remittance instructions at the facility and the outstanding level. Any user bank may also opt to specify any approved borrower remittance instruction for a specific flex schedule item or repayment item at the outstanding level. This enhanced flexibility means that the preferred remittance instructions at the outstanding, facility and deal level may now differ.

Validation when Auto Charge is enabled for a particular transaction type at the deal level, facility level and/or outstanding level ensures one and only one applicable remittance instruction exists for that balance type at the relevant level for a payment FROM the borrower. This means, for example, that at the deal level an applicable remittance instruction must exist at the deal level for the relevant product type, balance type in the deal currency for payments from the borrower before the user is allowed to enable Auto Charge at the deal level. If the decision to enable Auto Charge occurs at the outstanding level, then validation in Loan IQ ensures that one and only one applicable remittance instruction exists for the relevant outstanding product type, balance type in the outstanding currency for payments from the borrower before the user is allowed to enable Auto Charge at the outstanding level.

At the outstanding level, if the borrower/location/servicing group details override is allowed, then Loan IQ determines if one and only one approved preferred remittance instruction exists for that outstanding product type, transaction balance type in the outstanding currency for the outstanding level borrower servicing group, or if default remittance instructions are applicable. Loan IQ determines if a valid default remittance instruction exists for the outstanding level servicing group. Similarly, whenever the override of the deal borrower/location/servicing group details is allowed, validation of Auto Charge at that level checks that a single applicable valid remittance instruction exists at that decision level.

<u>Operating Scenarios: Multiple Preferred Remittance Instructions at the Oustanding Level</u>

Loan IQ allows multiple remittance instructions to be flagged as preferred remittance instructions. To apply Auto Charge at the outstanding level, Loan IQ associates one and only one valid applicable remittance instruction with a particular transaction type.

Servicing Group Details Scenario 1

Method	Product	Balance Type	Currency	Preferred?	Standard?	Approved?
IMT	Loan	P	Fac Ccy	*		✓
ACH	Loan	P	Ost Ccy	*		✓
DDA	Loan	I	Ost Ccy	*		✓
FED	Loan	I	Ost Ccy			✓
DDA	SBLC	F	Fac Ccy	*		✓
DDA		F	Deal Ccy	*		✓

In this scenario which of the following transaction types could be enabled at the outstanding level for a Loan when Auto Charge Requires Preferred Remittance Instructions (ACPRI is Y)?

Principal Payment	Y
Interest Payment	Y
Outstanding Level Ongoing Fee Payment	N

Servicing Group Details Scenario 2

Method	Product	Balance Type	Currency	Preferred?	Standard?	Approved?
IMT	Loan	P	Fac Ccy	*	S	✓
ACH	Loan	P/I/F	Ost Ccy	*	S	✓
DDA	Loan	P/I/F	Ost Ccy	*		✓
FED	Loan	P/I/F	Ost Ccy			✓
DDA	SBLC	F	Fac Ccy	*		✓
DDA	SBLC	F	Ost Ccy	*		✓
IMT	SBLC	F	Ost Ccy	*		✓
DDA		F	Deal Ccy	*		✓

In this scenario which of the following transaction types could be enabled at the outstanding level for a Loan when Auto Charge Requires Preferred Remittance Instructions (ACPRI is Y)?

Interest Payment	N
Outstanding Level Ongoing Fee Payment	N

If there are multiple borrowers for a given deal or facility, at least 1 borrower must have a valid approved applicable remittance instruction under the rules defined by the new system parameter, *ACPRI - Auto Charge Requires Preferred Remittance Instructions*. Otherwise, Auto Charge cannot be enabled for that deal or facility. When processing a fee payment for a specific borrower, if the valid remittance instruction is not DDA/ACH then an exception is logged during the nightly batch when Loan IQ attempts to process the payment using Auto Charge. At least one borrower at the facility level must have an applicable remittance instruction for that transaction type or an error occurs and Auto Change cannot be enabled. If all of the borrowers do not have an applicable remittance instruction for that transaction type, then a warning indicates that not all of the borrowers have an

applicable remittance instruction for Auto Charge and list the borrowers missing an applicable instruction.

Special Note on Processing Scheduled Payment Items with Specific RI:

Given that the user bank may opt to assign a particular remittance instruction to a scheduled payment item at any time, an excpetion is logged when attempting to process a scheduled payment item using Auto Charge whenever the item level remittance instruction if specified is not a valid approved ACH or DDA instruction. Whenever the user bank opts to apply override of servicing group details and a remittance instruction at the outstanding schedule item level, Loan IQ recommends that Auto Charge always be disabled for that outstanding. If Auto Charge begins to process a payment and the instruction is not DDA or ACH then an exception is reported:

'When auto charge fails, Loan IQ will not create the payment and this item will not be picked up by Auto Gen/Auto Release. This item can only be picked up by Auto Gen/Auto Release if Auto Charge does not apply.'

Summary of Validation Rules for Auto Charge at the Oustanding Level

When users are allowed to enable Auto Charge at the outstanding level, the distinct decision rules that apply when the following Loan IQ licenses apply are provided:

- Generally Available: (No additional servicing group override license)
- Preferred Remittance Instructions at Outstanding Level
- Override Borrower Servicing Group at Facility and Outstanding
- Override Borrower Servicing Group at Sublimit Level for Ongoing Fees.

	Outstanding Level Decision Rules for Auto Charge of Payments FROM the Borrower	
Relevant Loan IQ License Key	**Auto Charge Requires Preferred RI** (ACPRI = Y)	**Auto Charge Uses Default RI** (ACPRI = N)
Generally Available (No additional servicing group override license) GA includes Flex Schedule – Remittance Instruction in Item [Note: There will only be one borrower/location/servicing group for any given borrower at the deal level.]	Auto Charge can be enabled at the Outstanding override level in the Automated Transactions Editor when: One and only one approved ACH or DDA preferred remittance instruction relevant to the outstanding product type (SBLC or Loan), the balance type and the outstanding currency exists for this borrower at the deal level. Note: an exception will always be logged when attempting to process a scheduled payment item using Auto Charge whenever the item level remittance instruction if specified is not a valid approved ACH or DDA instruction as noted earlier.	Auto Charge can be enabled at the Outstanding override level in the Automated Transactions Editor if one of the following conditions apply when checked in the order given: One and only one approved ACH or DDA preferred remittance instruction relevant to the balance type and outstanding currency exists for this borrower and outstanding product type at the deal level. There is only one valid approved remittance instruction for the relevant balance type in the outstanding currency for this borrower at the deal level and it is an ACH or DDA instruction. There is a single approved standard remittance instruction at the customer level for this borrower that applies for this balance type and outstanding currency and it is an ACH or DDA instruction.

Preferred Remittance Instructions at Outstanding Level	Auto Charge can be enabled at the Outstanding override level in the Automated Transactions Editor when: Only one approved ACH or DDA preferred remittance instruction relevant to the product type, balance type and outstanding currency exists in the outstanding level borrower servicing group details for payments from the borrower.	Auto Charge can be enabled at the Outstanding override level in the Automated Transactions Editor if one of the following conditions apply when checked in the order given: One and only one approved preferred remittance instruction relevant to the balance type and outstanding currency exists for this borrower and outstanding product type at the outstanding level and it is an ACH or DDA instruction. There is only one approved remittance instruction for the relevant balance type in the outstanding currency for this borrower and outstanding product type in the outstanding level borrower servicing group details and it is an ACH or DDA instruction. There is an approved standard remittance instruction at the customer level for this borrower and outstanding product type that applies for this balance type and outstanding currency and it is an ACH or DDA instruction. Loan IQ already ensures that each standard remittance instruction is unique when updated in the Customer Notebook (link to relevant section of online help).
Override Borrower Servicing Group at Facility and Outstanding	Auto Charge can be enabled at the Outstanding override level in the Automated Transactions Editor if one of the following conditions apply when checked in the order given: When override borrower servicing group is enabled at the outstanding level, one and only one approved ACH or DDA **preferred** remittance instruction relevant to the product type, balance type and outstanding currency exists for this borrower/location/servicing group specified at the outstanding level for payments from the borrower.	Auto Charge can be enabled at the Outstanding override level in the Automated Transactions Editor if one of the following conditions apply when checked in the order given: A single approved applicable (ACH or DDA) **preferred** remittance instruction valid for the outstanding product type, the balance type and outstanding currency exists for this borrower/location/servicing group at the outstanding level. There is only a **single valid remittance instruction** for this borrower/location/servicing group at the outstanding level and it is an ACH or DDA instruction. Note: a valid instruction in this context means only one instruction applies to this product, balance type in the outstanding

	When override borrower servicing group is not enabled for this deal at the outstanding level, but only enabled at the facility level, then a single valid approved applicable **preferred** remittance instruction (ACH or DDA not both) exists for this borrower at the facility level. At the outstanding level a valid remittance instruction is a remittance instruction for the outstanding currency. When override borrower servicing group is not enabled for this deal at either the outstanding or facility level, then a single valid approved applicable **preferred** remittance instruction (ACH or DDA not both) exists for this borrower at the deal level.	currency and it is an ACH or DDA instruction. When override borrower servicing group is not enabled at the outstanding level, there is a single approved applicable (ACH or DDA) **preferred** remittance instruction for the balance type and outstanding currency for this borrower in the facility level details for the borrower/location/servicing group specified. When override borrower servicing group is not enabled at the outstanding level or facility level, then a single approved applicable **preferred** remittance instruction (ACH or DDA) relevant for this balance type and the outstanding currency exists for this borrower at the deal level. Otherwise, when override borrower servicing group is not enabled at the outstanding level or facility level, there is a single remittance instruction relevant to this balance type and outstanding currency for this borrower in the deal level borrower/location/servicing group specified and it is an ACH or DDA instruction. When there is no valid remittance instruction at the deal level, but there is an approved standard remittance instruction at the customer level for this borrower that applies for this balance type and outstanding currency and it is an ACH or DDA instruction.
Override Borrower Servicing Group at Sublimit Level for Ongoing Fees	Auto Charge can be enabled at the ongoing fee override level in the Automated Transactions Editor when: Only one approved ACH or DDA **preferred** remittance instruction relevant for this fee type and the fee currency exists at the sublimit level borrower servicing group details. Remittance instructions will be specific to included fee types in a future patch	Auto Charge can be enabled at the ongoing fee override level in the Automated Transactions Editor when one of the following conditions apply: A single approved **preferred** remittance instruction relevant to the fee type and fee currency exists for this borrower at the sublimit level and it is an ACH or DDA instruction. There is only one approved remittance instruction for the relevant ongoing fee type in the outstanding currency for this borrower in the sublimit level borrower servicing group details it is an ACH or DDA instruction.

	release of Loan IQ	There is a single approved standard remittance instruction at the customer level for this borrower that applies for this fee type and outstanding currency and it is an ACH or DDA instruction. Remittance instructions will be specific to included fee types in a future patch release of Loan IQ

For each transaction, that has not already been overridden at the Deal level:

The values displayed for Auto-Gen, lead days, generated status and auto-release will be those which are currently set for this transaction in the Automated Transactions table, if there is a row for this transaction in that code table.

If there is no row for this transaction in the Automated Transactions table, then the values displayed will be the default values (i.e. the values which would be displayed if you press the Add button on that Automated Transactions table in order to add a new row).

In both cases, the override indicator for that row will be unchecked and these values (other than the Override indicator) will be protected and cannot be changed.

If in Update mode and the user checks the Override indicator, the values are unprotected and the user can change them (directly in the cell on the list).

For each transaction which has already been overridden at the Deal level:

The values displayed for Auto-Gen, lead days, generated status and auto-release will be those currently on the Override table.

The Override indicator will be checked, and these fields will be able to be updated (directly in the cell on the list), if the screen is open in Update mode.

In Update Mode when the user unchecks the Override indicator, the values will revert to their values from the Automated Transactions table or default values as indicated above and will be protected.

If in Update mode, the override indicator can be checked and the values overridden even if the global Auto-Gen and/or Auto-Release indicators are unchecked.

For more information, see the *Misys Loan IQ Override Automated Transactions Setting Setup & User Guide* document.

Disable/Enable Auto-Reduce Expired Facilities

Beginning with Release 6.0.09.11 and forward, the following *Auto-Reduction of Expired Facilities* functionality is available.

The menu option Disable/Enable Auto-Reduce Expired Facilities can be used to toggle between disabling and enabling the auto-reduce functionality for all the facilities of a specific deal. This menu option works similar to *Auto-Release* menu option.

The setting of this menu option overrides the setting of the system parameter *Auto-Reduce Facility at Expiration* for a specific deal. If the system parameter is set to *Y* and if the *Auto-reduce Expired Facilities* menu option is disabled for a specific deal, the nightly batch will not consider the facilities of that deal for auto-reduction.

If the system parameter is set to *N* and if the *Auto-Reduce Expired Facilities* menu option is enabled for a specific deal, the nightly batch will consider the facilities of that deal for auto-reduction.

Notes:

At the time of creation of a deal, the *Auto-Reduce Expired Facilities* menu option in the Deal notebook is defaulted by the value of the system parameter *Auto-Reduce Facility at Expiration*. This can be overridden at the deal level.

An event is written in the Deal notebook when the *Auto-Reduce Expired Facilities* menu option is changed at the deal level.

Any change made to the value of the system parameter *Auto-Reduce Facility at Expiration* will not change the value of the *Auto-Reduce Expired Facilities* menu option at the Deal level.

Deals that pre-exist at the time of implementation of this enhancement and which have never had the value of this indicator specifically set, are treated as though the indicator is checked, set to *Y,* current functionality.

Beginning with Release 6.0.09.11 and forward, the following *Auto-Reduction of Expired Facilities* functionality is available.

The system parameter *Auto-Reduce Facility to level of Outstandings* is applicable only if the menu option *Auto-Reduce Expired Facilities* is enabled for the deal. If the menu option *Auto-Reduce Expired Facilities* is enabled for the deal, the system parameter *Auto-Reduce Facility to level of Outstandings* determines whether the facility can be auto-reduced if the aggregate outstandings are not zero.

Disable/Enable Auto-Terminate Facility

Beginning with Release 6.0.09.11 and forward, the following *Auto-Reduction of Expired Facilities* functionality is available.

The menu option Disable/Enable Auto-Terminate Facility can be used to toggle between disabling and enabling the auto-terminate functionality for all the facilities of a specific deal. This menu option works similar to *Auto-Release* menu option.

The setting of this menu option overrides the setting of the system parameter *Auto-Terminate Facility* for a specific deal. If the system parameter is set to *Y* and if the *Auto-Terminate Facility* menu option is disabled for a specific deal, the nightly batch will not consider the facilities of that deal for auto-termination.

If the system parameter is set to *N* and if the *Auto-Terminate Facility* menu option is enabled for a specific deal, the nightly batch will consider the facilities of that deal for auto-termination.

Notes:

At the time of creation of a deal, the *Auto-Terminate Facility* menu option in the Deal notebook is defaulted by the value of the system parameter *Auto-Terminate Facility*. This can be overridden at the deal level.

An event is written in the Deal notebook when the *Auto-Terminate Facility* menu option is changed at the deal level.

Any change made to the value of the system parameter *Auto-Terminate Facility* will not change the value of the *Auto- terminate Facility* menu option at the Deal level.

Deals that pre-exist at the time of implementation of this enhancement and which have never had the value of this indicator specifically set, are treated as though the indicator is checked, set to *Y,* current functionality.

Change Branch/Processing Area

User may change the Branch and/or Processing Area assigned to this Deal at any time, by selection of this option. Current values for both Owning Branch and Processing Area are displayed on the MIS Codes tab and an event is written on the Events tab every time the Owning Branch and/or Processing Area is changed.

Branch - Changing to a Branch associated with a **different** time zone places a shared lock on the **new** time zone and the shared lock on the time zone associated with the **old** branch is released as soon as the change is saved.

Note: Beginning with Release 5.5.08.02 and forward, the following separately licensed functionality applies:

Changes to branch, processing area, or both, from the Deal Notebook flow down to the Facility Notebook of all existing facilities. A warning message that all of the facilities branch/processing area is updated is issued when the deal branch/processing area is changed. This requirement applies even if the branch/processing area of the facility is not currently the same as that of the deal.

Note: The main branch of the Deal is the branch of the Host Bank main Servicing Group of the Deal, not the branch of the Deal. Therefore, if the Deal is not a Host Bank Agented Deal, the Deal does not have a Main Branch.

Processing Area - Only the processing areas that are valid for the deal's Owning Branch are presented for selection, so that the new combination of Branch and Processing Area is always valid. Deal Processing Area is matched against list of processing areas assigned to a user, and only users with a matching processing area can update the Deal. Changing Processing Area to one not in user's list switches the deal into *Inquiry* mode.

Change Currency

Option is available only prior to deal close and allows the user to change the Deal's Currency, (which is always displayed on first tab of Deal Notebook). Selection List of all (active) currencies is presented (displaying both the Currency Code and Description), and user may choose any value presented. Changing the Deal's Currency has no effect on the currencies assigned to existing facilities, but any new facilities added to the deal will default to the currency of the Deal.

Note: If the currency is changed, a warning message is displayed alerting the user to check any existing pricing matrices as they may be impacted by a change to the deal currency.

Change OK to Fund Indicator

User may change the **OK to Fund** (**OKFND**) indicator from *Yes* (indicator checked) to *No* (indicator unchecked), and vice versa, at any time by selection of this option. Current OK to Fund status is always displayed on Restrictions tab, and an event will be written on the Events tab every time **OK to Fund** indicator is changed. **Warning** is issued when outstandings are released if the **OK to Fund** indicator is set to *No* (unchecked).

Note: The **OK to Fund** indicator defaults according to setting of the **OKFND** (*Deal OK to Fund*) system parameter in the **System Parameter** table (in GTM).

Change HLT Status

User may change the HLT Status from *Yes* (Indicator checked) to *No* (Indicator unchecked), and vice versa, at any time by selection of this option. Current HLT Status is always displayed on the Risk/Regulatory tab, and an event will be written on the Events tab every time HLT status is changed. Effective Date defaults to current date. User may also change HLT status via the History button on the Risk/Regulatory tab.

Changing the Deal HLT Status History creates an **as-of trigger (and a re-accrual)** back to the Start Date of the history entry that changed.

Change Sole Lender Status

Option is not available to **pending** deals or closed Non-Host Bank Deals. For all other deals, current Sole Lender status is always displayed on first tab of Deal Notebook.

When a deal is changed **to** Sole Lender Deal, no more than one contractual circle can exist, and that circle must be a Host Bank Origination Primary and the lender must be the Agent.

Change **from** Sole Lender Deal can be made with no validation

If an approved, unclosed deal is changed **to or from** a Sole Lender Deal, the deal is returned to pending status and must be re-approved.

Change to Non-Host Bank Deal

Option is available only to Unrestricted Host Bank Deals. User may change an Unrestricted Host Bank Deal to a Closed Non-Host Bank Deal, unless the Host Bank is already established as a lender in the deal (even with a zero share), or unless the Host Bank appears as the Agent. Closed Non-Host Bank Deals may be deleted.

If the request is valid and the Host Bank Deal is not already closed, the following occurs:

Deal Status is updated to *Closed*.

Deal Closed Date is set to Current Business Date, and Deal Close Event is created (which may be edited later).

Deal Close Date then flows down to any Facility Effective Dates, Facility Sublimit Effective Dates and/or Borrower Effective Dates that are blank. Effective Dates that are less than Deal Close Date are not overwritten (and are now invalid).

Early Discussion Deal indicator is turned off (set to *No*).

Facility Close Transaction is created for every facility belonging to the Closed Non-Host Bank Deal.

Change to Host Bank Deal

Option is available only to Non-Host Bank Deals.

User may change a Closed Non-Host Bank Deal to a Pending Unrestricted Host Bank Deal at any time, provided that Deal Department has been defined, no closed circles of any type are attached to the deal, the deal is not assigned to a Distressed Sales Group, and there are no released transactions.

If the request is valid, the following occurs:

Deal Status is updated to *Pending*.

Deal Closed Date is removed.

Early Discussion Deal indicator is turned on (set to *Yes*).

Facility Close Transactions (previously created when Closed Non-Host Bank Deal was created) are deleted.

Note: If any released transactions exist when this option is selected, status of deal changes to *Closed Unverified Host Bank Deal* (rather than to *Pending*), even though the Host Bank circle has not been created yet. No facility close transactions are created, since they were already created when the Closed Non-Host Bank Deal was created.

Summary:

The facility close transaction will be created when the Closed Non-Host Bank Deal is originally created, not when/if it subsequently changes to a Closed Unverified Host Bank Deal. This includes creating the facility close transaction when a Pending Deal changes (via option selection) to a Closed Non-Host Bank Deal. Also, if a Closed Non-Host Bank Deal subsequently changes to a *Pending* Host Bank Deal, *the facility close transaction will be deleted.*

If the request to *Change to Host Bank Deal* is valid, whether the status changes to *Closed Unverified Host Bank Deal* or *Pending* is determined as follows:

If any released transactions exist, status of deal changes to *Closed Unverified Host Bank Deal* (even though the Host Bank circle has not been created yet). User will have to create and close the Host Bank circle before the system will allow the status of the deal to change to *Closed Host Bank Deal*. No facility close transaction will be created (since it was already created when the closed non-host bank deal was created).

If there are no released transactions, status of deal changes to *Pending* and facility close transaction (previously created when deal was created) will be deleted.

When a Host Bank circle is added to a Closed Non-Host Bank Deal, whether the status changes to *Closed Unverified Host Bank Deal* or *Pending* will be determined as follows (by applying same rules as above):

If any released transactions exist, status of deal changes to *Closed Unverified Host Bank Deal*. No facility close transaction will be created (since it was already created when the closed non-host bank deal was created).

If there are no released transactions, status of deal will change to *Pending*, and facility close transaction (previously created when deal was created) will be deleted.

Amounts for facilities belonging to closed deals (Closed Non Host Bank Deal, Closed Unverified Host Bank Deal, Closed Host Bank Deal) are protected. The only way the amounts can be changed is via a Facility Commitment Change transaction (Increase/Decrease).

If user exercises the option to change a pending Host Bank Deal to a Closed Non-Host Bank Deal, system creates the facility close transaction.

Circle Select

This option is available to the General Loan IQ Audience beginning with Service Pack Release 6.0.08.08. When this option is selected, the **Circle Selection** window opens. This action is equivalent to dragging and dropping the Deal icon onto the Circle icon on the Loan IQ Desktop. Refer to the *Misys Loan IQ How to Prepare for the 2008 User Group Enhancements 6.0.08.08 SP* document for further details.

Deal Position List

The Simplified Investor Setup functionality is separately licensed. Licensed clients may also refer to the *Misys Loan IQ Simplified Investor Setup and User Guide* for further information. If you are not a licensed client and would like more information about the Simplified Investor Setup functionality, please contact your Misys Loan IQ Account Manager.

The Simplified Investor Setup provides the user with a simple way to enter Lender details via the *Deal Position List* window, which may be accessed from the Options menu on the Deal Notebook. The Lender details include Lender Name, Lender ID, Position Amount and Totals by Currency provided at the bottom of the list.

The Simplified Investor Setup functionality is separately secured in **User Profile**. A user must have Update Access rights to the **Deal Position List** Application Function in order to add, modify and/or delete lender details in the Deal Position List window. The Deal Notebook must also be in *Update* mode. A properly authorized user may create a Deal Position List in any deal, regardless of its Deal Status (*Pending, Approved, Closed, Cancelled*, etc.) and regardless of whether or not the Host Bank is the Agent on the Deal.

Users granted *Inquiry Access* to the Deal Position List may view, but not update its contents. Users granted *Access Denied* to the Deal Position List may not select the Deal Position List option from the Deal Notebook.

Choosing this option brings up the *Deal Position List* window.

Attribute	Req/Opt	Size/Format	Rules
Currency 1 Currency 2 Currency 3	Optional	Drop-down list(s)	Select a Currency from the drop-down list. The currencies available for selection are those active currencies on the Currency table in Table Maintenance. The selection for each Currency appears as a column heading in the Lender Positions List. The selection may be modified at any time. The currency of a column in which the amounts have already been entered may be changed, resulting in the same amount being expressed in that new (different) currency. **Note:** If a Lender has positions entered in for example, EUR, USD and GPB, then these will be the three currencies that are allowed for any other Lender. Another Lender may have position amounts entered in just EUR, in just USD, in just GBP, or may have two positions entered in EUR and USD, or two positions entered in EUR and GBP or two positions entered in USD and GBP, etc. The introduction of a fourth currency (such as JPY) for another Lender is not permitted.
Lender Positions List	Optional	Display	Each row in the Lender Position List displays a Lender Name, a Lender ID and up to three amounts, one for each of the selected currencies Currency 1, Currency 2, and Currency 3. The Lender's total position in the Deal is displayed at the end of the Deal Position List. The total represents the sum of all the position amounts entered for that Lender in the various currencies. The List of Lenders may be modified at any time. Any time modifications are made to the position amounts, the system re-aggregates the total lender positions by currency, and displays the new currency totals at the end of the list. An event is not created following a modification, nor is a history of changes recorded. **Note:** Currency conversions of deal position amounts entered in currencies that are different from the currency of the Deal are not performed

			by the system.
Add	Optional	Button	Brings up the *Lender Positions Detail* window (see the table below).
Print	Optional	Button	Ability to Print is provided.
Export	Optional	Button	Ability to Export is provided.
Delete	Optional	Button	Ability to delete a Lender from the Lender Positions is provided.
Comment	Optional	Text box	User may enter a maximum of 256 alphanumeric characters in the Comment text box.
OK	Optional	Button	Saves additions and/or changes made to the *Deal Position List* window and returns user to the Deal Notebook.
Cancel	Optional	Button	Changes made to the *Deal Position List* window are not saved and the user is returned to the Deal Notebook.

Lender Positions Detail window:

Attribute	Req/Opt	Size/Format	Rules
Lender Name	Required	30 alphanumeric characters	User may enter the Lender Name or, if the Lender exists on the Loan IQ database, the user may retrieve it via the Customer button (see Customer attribute). If the user: Enters the Lender Name, rather than retrieving it via the Customer button, then the Lender Name entered as simple text may be modified at any time. Selects the Lender from the Loan IQ database (via the standard Loan IQ *Customer Select* window), the Customer Short name and External ID of the selected Customer populates the Lender Name and Lender ID columns in the Deal Position List. The Lender Name and Lender ID are then protected and may not be modified by the user. The selected Customer does not need to have a lender profile. The Lender Name is required to establish the Lender Positions entry, and the Lender Name may not be saved if it is a duplicate. Prior to saving the Deal Position List, the system checks for duplicates and issues appropriate error messages when/if duplicate Lender Names are detected.
Lender ID	Required	15 alphanumeric characters	User may enter the Lender ID or, if the Lender Name exists on the Loan IQ database, the user may retrieve the Lender Name and Lender ID via the Customer button (see Customer attribute). If the user: Enters the Lender ID, rather than retrieving it via the Customer button, then the Lender ID entered as simple text may be modified at any time. .Selects the Lender Name and Lender ID

			from the Loan IQ database (via the standard Loan IQ *Customer Select* window), the Customer Short name and External ID of the selected Customer populates the Lender Name and Lender ID columns in the Deal Position List. The Lender Name and Lender ID are then protected and may not be modified by the user. The selected Customer does not need to have a lender profile. The Lender ID is required to establish the Lender Positions entry, and the Lender ID may not be saved if it is a duplicate. Prior to saving the Deal Position List, the system checks for duplicates and issues appropriate error messages when/if duplicate Lender ID's are detected.
Customer	Optional	Button	Brings up the Customer Select window that allows the user to select the Lender from the Loan IQ Database. The Customer Short Name and external ID of the selected Customer populates the lender name and lender ID columns in the Lender Positions section of the window. The Lender Name and Lender ID fields are protected and may not be modified by the user. The selected Customer does not need to have a Lender Profile.
Currency 1 Currency 2 Currency 3	Optional	Amount(s)	Enter the Amount for each Currency. The Amount(s) may be modified at any time. There is no validation for these attributes. The Total of the Lender Position amounts entered for each currency may be less than, greater than, or equal to the Deal Commitment. The Lender may be saved in the Deal Position List even if no position amounts have been entered for that Lender.
Lender Positions	System Generated	Display	Displays the Lender Name, Lender ID, Currency 1, Currency 2, and Currency 3. The Lender's total position in the Deal is displayed at the end of the Deal Position List. The Total represents the sum of all the position amounts entered for that Lender in the various currencies. The Total of the Lender Position amounts entered for each currency may be less than, greater than, or equal to the Deal Commitment.
OK	Optional	Button	Saves the Lender Position Detail and adds it to the Lender Positions list, and re-aggregates the total, by currency. Prior to saving the Deal Position List, the system will check for duplicates and will issue appropriate error messages when/if duplicate Lender Names and/or duplicate Lender ID's are detected. After all validations are passed, the entry is saved and the user is returned to the Deal Position List window.
Cancel	Optional	Button	The entry is not saved and the user is returned to the Deal Position List window.

Collateral

Brings up the standard *Collateral* window indicating whether or not the outstandings have been collateralized and if so, the applicable secured level is displayed (Deal, Facility or Outstanding), along with the Collateral Agent, Collateral Administrator, Percent Secured, Collateral Threshold and Primary Collateral Type. Relevant Collateral Account information is also shown (Customer Name, Market Value, Eligible Value and Discounted Eligible Value), and if collateralized at the **Deal** level and user possess the proper update authority, the relevant collateral information may be updated.

Note: User must also possess appropriate authorization to view collateral.

Beginning with a patch to Release 6.0.10.05, as per the *Allow Collateral Accounts be linked to Multiple Collateral Groups* enhancement, clients can link Collateral Accounts to Multiple Collateral Groups via the Deal, Facility, Outstanding, and Collateral Change Transaction levels.

System parameter (**CAMCG**) Allow Collateral Account Linkage to Multiple Collateral Groups) setting determines whether a warning message or error message is displayed.

Please see separate document (*Misys Loan IQ Collateral Edit & Validation Rules*) for further details.

Create Amendment

Selecting the **Create Amendment** option (available only to **closed** deals) allows user to create a new Amendment, which must have an **Amendment Number**, an **Effective Date** and a **Descriptive Comment**, and which may or may not have underlying transactions associated with it. Some of the optional transactions that may be associated with an Amendment relate to a particular Facility (for example, extending the Facility's Expiry and/or Maturity Date and/or increasing or decreasing the Facility's Commitment Amount) and another type (the Freeform amendment transaction) may pertain at either the Deal or Facility level.

Once an Amendment has been created, it appears on the Pending Transactions tab in the Deal NB, and drilling down on it brings up the Amendment Notebook (with its own **Options** menu, its own Workflow and Event tabs and a Listing of the individual transactions associated with the Amendment).

For further details on Amendments, please see separate document *Misys Loan IQ Amendment Edit & Validation Rules*.

Beginning with Release 6.0.08.05 (Patch) with the separately licensed **Amortization based on History of Facility Maturity Dates** enhancement, the following functionality applies:

The Facility Maturity Date can be changed and the history of Facility Maturity Date updated via **Deal Notebook > Options > Create Amendment > Add Button > Select Facility > Facility Extension,** only if Facility Change Transaction is not applicable for changing the Facility Maturity Date.

In the *Facility Maturity Date History* screen, the Start Date will be the date of releasing the Amendment transaction and the Facility Maturity Date will be the new Maturity Date input via the Amendment transaction.

For further information, please refer to the **Amortization based on History of Facility Maturity Dates** topic under Facility and/or the *Misys Loan IQ Facility Edit & Validation Rules* document.

Available in Release 7.2.7, the separately licensed Automatic Lender Share Adjustment in Amendments functionality applies.

The following changes are implemented for Lender Share Adjustments done via the Amendment notebook in Loan IQ. The changes apply in:

Facility Lender Share Adjustments - The Affects Outstandings check box, Affected Outstandings Share Adjustment tab, and Affected Outstandings page are added to the Lender Share Adustment notebook.

Unscheduled Commitment Increases - The Affected Outstandings Share Adjustment tab, and Affected Outstandings page are added to the Unscheduled Commitment Increase notebook.

Unscheduled Commitment Decreases - The Affected Outstandings Share Adjustment tab, and Affected Outstandings page are added to the Unscheduled Commitment Decrease notebook.

For further information, please refer to the Lender Share and Facility Edit & Validation Rules documents.

Deal Change Transaction

Available only when the **Deal Change Transaction Required** system parameter **DCTRQ** is set to *Yes*. Otherwise, this option will not appear on the Options menu of the Deal Notebook. The option will only be available for closed verified host bank deals.

Fields available for update must be set to *Yes* in the **Deal Change Field Protection Association** table in **Table Maintenance**. When the **DCTRQ** System Parameter is set to *Yes*, all fields included in the Deal Change Transaction Notebook and **which are also set to *Yes* in the Deal Change Field Protection Association table** cannot be updated in the Deal Notebook. Any addition, deletion or modification of these fields must be accomplished via the Deal Change Transaction. Conversely, when a field is set to *No* in the **Deal Change Field Protection Association** table, they will **not** be available for change in the Deal Change Transaction Notebook and must be updated directly in the Deal Notebook.

Upon selection of the **Deal Change Transaction** menu option, a new Deal Change Transaction will be created and saved.

Only one Deal Change Transaction may exist with a status of *Awaiting Send to Approval*, *Awaiting Approval* or *Awaiting Release* at one time. In other words, if a pending transaction exists, another one will not be created until the pending one has been released (or cancelled and/or deleted). However, multiple attributes may be changed in via a single Deal Change Transaction.

Notes regarding Deal Change Transaction Security:

Deal Change Transaction security does not work in combination with any existing security granting access rights to any and/or all of the individual deal attributes that may be separately secured and are also covered by the Deal Change Transaction security. This is explained in further detail below:

If a client includes a deal attribute as one that should be protected by Deal Change Security, then any user with *Update Access* to Deal Change Transaction can and should be able to update that attribute via Deal Change Transaction. That user's individual access to that particular attribute in **User Profile** is irrelevant, as it is overridden by the higher level security granted by Deal Change Transaction security.

If a client does not have *Update Access* to Deal Change transaction, and a particular attribute is protected by Deal Change Security, then the user cannot update that attribute, either via Deal Change Transaction or via the Deal Notebook. The individual security that the user has to that attribute in **User Profile** is irrelevant, if that attribute is included in those that are protected via Deal Change transaction.

If a client does not include a specific deal attribute as one that should be protected by Deal Change Security, then that user's individual access to that particular attribute in **User Profile** takes precedence.

Available in a Release TBD the following separately licensed Funding Allocation for Loans Using Facility Amortization Schedule functionality applies.

The value of the Funding Allocation Details To Treasury Interface indicator is modifiable via Deal Change Transaction, if Deal Change Transaction is applicable for *Pricing Rules*.

Available in Release 7.2.6 with separately licensed enhancement, **Tax Information at Lender Level**. The Country of Governing Law field is modifiable via the Deal Change Transaction.

Available in Release 7.3.1 with separately licensed enhancement, *CO Address on Billing*, a new indicator CAREO is added to Deal Change Fields code table which allows us to enable the 'Bill Care of Contacts' through Deal Change Transaction.

Validation - If the 'Bill Care of Contact' is selected on a Closed Deal using the Deal Change Transaction but if there isn't a 'Care of' Purpose contact in Primary Borrower Servicing Group, then the following hard error occurs - "Bill Care-of Contact may not be checked because the servicing group does not include a care-of contact."

General Tab

Field Name	Req/Opts	Size/Format	Rules
Previous Deal Values – lists the current values that exist in the Deal Notebook for the following (provided the fields are populated in the Deal Notebook, certain fields which are not required may not populate and will therefore appear as blanks in the Previous Deal Values section of the General Tab).			
Deal Classification	Required	Button	Deal Classification is required for Deal Close. The current value will appear in the Deal Change Transaction Notebook.
Admin Agent	Optional	Button	When selected, the *Deal Admin Agent* window appears. The previous deal's Customer, Location, and Servicing Group fields are displayed.
Agreement Date	Optional	Date	If no Agreement Date was entered for the deal, this will be blank, but an Agreement Date may be added under **Deal Values** below.
Performing Status	Required	Drop down list	Deal Performing Status (which applies **only** to Deal Level Admin Fees) defaults to Accrual. The current value set prior to Deal Close will appear. **Note:** The effective date of the performing status change is equal to the Close Date of the Deal. The effective date may be changed by clicking on the **Effective Date** button for the *Deal Change Transaction* event on the Events tab of the Deal Notebook.
Sales Difficulty Factor	Required	Numeric	Defaults to 1.00000 in the Deal Notebook and cannot be zero. Value will appear in Deal Change Transaction.
Country of Governing Law	Optional	Drop down list	This is separately licensed functionality. If you are licensed client, please refer to the Core book in Online Help. Defaults to the Country associated with the branch of the Admin Agent in the Deal, but that country can be overridden via Deal Change Transaction for Closed Deals.
Department	Required	Drop down list	Required for deal creation. Current department for the deal will be displayed.
Department Subtype	Optional	Drop down list	This is separately licensed functionality. If you are a licensed client, please refer to the *Misys Loan IQ Department Subtype Setup & User Guide*. If you are not a licensed client and would like further information, please contact your Misys Loan IQ Account Manager. Required for deal creation. Current subtype associated with the Department is displayed.
Expense Code	Required	Expense Code Table	Required for Deal Close. Current Expense Code for the deal will be displayed.
Originator	Optional	User ID	If defined in Deal Notebook, will appear in Deal Change

			Transaction.
Admin Agent	Optional	User ID	If defined in Deal Notebook, will appear in Deal Change Transaction.
Relationship Manager	Optional	User ID	If defined in Deal Notebook, will appear in Deal Change Transaction.
Deal Values – new values for the above field may be entered below, provided their value is set to Yes in the Deal Change Field Protection Association Table in GTM. All of these must meet Deal level validations in order for the Deal Change Transaction to be saved.			
Deal Classification	Conditional	Button	
Admin Agent	Conditional	Button	Available when System Parameter **DCTRQ** (Deal Change Transaction Required) is set to *Y* (Yes). Required for Deal Change Transaction. Users can change the Agent Customer, Customer Location, and Servicing Group for the location. Note: Users must change the Servicing Group if the customer is being changed.
Agreement Date	Conditional	Date	
Performing Status	Conditional	Drop down list	
Sales Difficulty Factor	Conditional	Numeric	
Department	Conditional	Drop down list	
Department Subtype	Conditional	Drop down list	
Expense Code	Conditional	Expense Code Table	
Originator	Conditional	User ID	
Admin Agent	Conditional	User ID	
Relationship Manager	Conditional	User ID	
FATCA Details			
Grandfathered	Conditional		Available in Release 6.0.10.13.1 and 7.2.7.5, with separately licensed FATCA enhancement.
Grandfathered Status Lost On	Conditional		Available in Release 6.0.10.13.1 and 7.2.7.5, with separately licensed FATCA enhancement.

Borrower Tab

Displays the Current Deal Borrower (s) and Depositor (s), under Previous Borrowers/Depositors. Under Borrowers/Depositors, user may add a new borrower and/or depositor via the **Add** button. It is not possible to delete a borrower or depositor from a closed deal via the Deal Change Transaction. Details of existing borrowers must be changed via the normal means in the Deal Notebook and not via the Deal Change Transaction, this includes changing the Primary Borrower.

Previous Borrowers/Depositors displays all borrowers and depositors that exist for the deal.

Borrowers/Depositors allows addition of new borrowers and or depositors. When adding a new borrower or depositor, the user must select a location and a servicing group, if more than one exists for the customer. Error will be issued if a Location and Servicing Group have not been selected, however, once the Location and SG have been selected, they may not be changed until after the Deal

Change Transaction has been released and the new customer added to the deal. Once this is done, the new Borrower/Depositor Details may be changed via the regular *Details* window, accessed from the Summary tab of the Deal Notebook.

Available in Release 7.4.3, when licensed for **Float Charges**, the following functionality applies:

The Float Charges functionality is protected by Deal Change Transaction. The user can view/update the same for the deal borrower's Preferred Remittance Instruction.

When the user clicks on the Float Charges button the following window opens **Float Charges Details.**

Attribute	Req/Opt	Size/Format	Rules
Previous Float Charges Rules			
Float Days Applies	Optional	Indicator (Checkbox)	Displays the current value of **Float Days Applies**.
Float Days Options	Conditional	Drop down	Displays the current value of the **Float Days Options**.
New Float Charges Rules			
Float Days Applies	Optional	Indicator (Checkbox)	Allows a change for **Float Days Applies**.
Float Days Options	Conditional	Drop down	Allows a change for **Float Days Options**.

Available in Release 7.4.3, when licensed for **Payment Application hierarchy**, the following functionality applies:

The Payment Application hierarchy functionality is protected by Deal Change Transaction and the user can view/update the same for the deal's Preferred Remittance instruction.

When the user clicks on the Payment Application Hierarchy button the following window opens **Payment Application Priority Hierarchy Selection List**

Attribute	Req/Opt	Size/Format	Rules
Available	Optional	List (showing multiple attributes)	Shows list of Available Outstandings
Selected	Optional	List (showing multiple attributes)	Allows a change to the hierarchy of the selected Loan Outstandings for Payment Application Priority Hierarchy.
Search	Optional	Text box	This Search capability assists the user to choose a particular loan outstandings under the deal.
OK	Optional	Button	This button confirms and saves the hierarchy.
Cancel	Optional	Button	This button cancels any changes made in the window.

In the Previous Borrowers/depositors tab, the user can only view the previous value for Float Charges and Payment Application Hierarchy by drilling down into the Deal's Preferred Remittance Instruction. The Deal Servicing Group Details window opens, which displays all the Preferred Remittance Instructions. The user can view the value for Float Charges and Payment application hierarchy for every Remittance Instruction by clicking the respective buttons.

Available in Release 7.4.3, when licensed for **Asset Based Lending**, the following functionality applies:

The Double Side Posting Impact functionality is protected by Deal Change Transaction and the user can view/update the same for the deal's Preferred Remittance instruction.

When the user clicks on the Double Sided Posting button the following window opens **ABL Double Side Posting Impact**

Attribute	Req/Opt	Size/Format	Rules
Method	System Generated	Table: Remittance Method	Selects one value from list of active codes.
Account No	System Generated	Text box	Displays the account number related to the Remittance instruction. For more details please check the Customer Ed-Val.
Description	System Generated	Text box	Displays the short description of the Remittance instruction.
Currency	System Generated	Text box	Displays the currency related to the Remittance instruction
Previous Double Side Posting Impact	System Generated	Text Box	Displays the previous value of the Double Side Posting Impact
New Double Side Posting Impact	Optional	Drop-Down	Allows a change to the Double Side Posting impact value
OK	Optional	Button	This button saves the changes made in the window.
Cancel	Optional	Button	This button cancels the changes made in the window.

Fee Pricing Rules Tab

Previous Fee Pricing Rules

Displays Current Ongoing Fee Pricing Types for the deal. User may view details by drilling down.

Fee Pricing Rules

User may add new Fee Pricing Options via the Add button, delete existing ones via the Delete button, or modify existing options by drilling down to the *Fee Pricing Options Details* window. The fields that may be modified include Matrix Change Application Method, Non Business Day Rules, Bill Borrower Indicator and Billing Number of Days.

Available in Release 7.2.7, the separately licensed Accruing Fees at the Outstanding Level functionality applies.

As per current functionality, the Deal Change Transaction may be set up to include pricing rules, including fee pricing rules. When fee pricing rules are included, they include the new outstanding ongoing fee types in the same manner as in the Deal notebook.

Pricing Options Tab

Previous Allowed Pricing Options

Displays Current Pricing Options for the Deal. User may view details by drilling down.

Allowed Pricing Options

User may add new Interest Pricing Options via the Add button, delete existing ones via the Delete button, or modify existing options by drilling down to the *Interest Pricing Options Details* window.

The following fields from the *Pricing Options Details* window which be modified (if applicable): Initial Fraction Rate, Rounding, Rounding Decimal Precision, Rounding, Non Business Day Rule, Anniversary Date Applies (available with Release 7.2.7 with the *Anniversary Date* enhancement) Utilization Impact, Matrix Change Application Method, Rate Change Application Method, Payment Mode (if licensed), Interest Due upon Repricing checkbox, Interest Due on Principal Payment checkbox, Reference Banks Apply, Number of Days To Treasury Review, Intent Notice Days in Advance, Intent Notice time, Rate Setting Days in Advance, Rate Setting Time, F/X Setting Days in Advance, CCY, Bill Borrower checkbox, Repricing Frequency, Billing Number of Days, Maximum Drawdown Amount, Minimum Drawdown Amount, Minimum Payment Amount, Minimum Amount Multiples, RAC Reference Banks Apply, RAC Repricing Frequency Max, RAC Initial Fraction Rate, Rounding, RAC Round Decimal Precision, Rounding.

Other fields from the Deal Pricing Rules Tab that can be added or modified via the Deal Change Transaction include: Consolidated Billing Indicator, Reserve Adjusted Rates Indicator, Circle Settlement (Actual or Flat) and Grace Period. The Previous values for these fields will also be displayed if they can exist.

Risk Tab

Contains all the fields from the Risk Tab in the deal Notebook that may be changed via the Deal Change Transaction (although they must also be set to yes in Deal Change Field Protection Association Table in order to be available for change).

Field Name	Req/Opts	Size/Format	Rules
Previous Community Reinvestment Act	Conditional	Checkbox	Displays the current setting from the Deal Notebook, either *Yes* (checked) or *No* (unchecked).
Community Reinvestment Act	Optional	Checkbox	User may change the previous setting from *No* (unchecked) to *Yes* (checked) or vice versa
Previous HLT	Conditional	Checkbox	Displays the setting from the Deal Notebook, either *Yes* (checked) or *No* (unchecked)
Previous History	Conditional	Button	Displays the previous history for the HLT Indicator from the Deal Notebook.
HLT	Optional	Indicator (checkbox)	User may change the previous setting from *No* (unchecked) to *Yes* (checked) or vice versa.
History	Optional	Button	Brings up *History* window for the HLT indicator that the user may modify in the same manner as other history windows. Update History will replace the Previous History once the Deal Change Transaction is released.
Previous Shared National Credit	Conditional	Indicator (checkbox)	Displays the current setting from the Deal Notebook, either *Yes* (checked) or *No* (unchecked).
Shared National Credit	Optional	Indicator (checkbox)	User may change the previous setting from *No* (unchecked) to *Yes* (checked) or vice versa.
Previous Guarantees	System Generated	Display	Displays any Guarantees that currently exist for the deal listed by Guarantor Name, Type, Priority, Secured, Effective Date, Expiry Date, Global Guarantee Amount, Global Guarantee Percentage and Relationship.
Guarantees	System Generated	Display	Will display any new Guarantees added to the deal via the Deal Change Transaction. User may update details by drilling down to access the *Guarantor Details* window. **Note:** Details can only be changed via the Deal Change Transaction when Guarantees is set to *Y* in the *Deal Change Field Protection Association* table and the **Deal Change Transaction Required** System Parameter is set

			to *No*.
Add Guarantee	Optional	Button	Allows addition of new Guarantors to the deal.
Delete Guarantee	Optional	Button	Allows deletion of Guarantors from the deal.

Ratios Tab

Previous Financial Ratios

Displays any Financial Ratios that currently exist for the deal. Clicking the History Button will display the History.

Financial Ratios

Allows addition or deletion, as well as modification of Financial ratios. History may be changed (or created if none existed previously, although the Financial Ratio itself must be added first by the Add button) via the **History** button. Any new Financial Ratio that is added will create a History Item with a start date equal to the current business date.

Conditions Tab

Previous Outside Conditions

Displays current outside conditions if any exist for the deal, as well as current status (True or False). History may also be displayed via the History Button.

Outside Conditions

Allows addition or deletion, as well as modification of Outside Conditions. History may be changed (or created if none existed previously, although the Outside Condition itself must be added first by the Add button) via the **History** button. Any new Outside Condition that is added will create a History Item with a start date equal to the current business date.

Restrictions Tab

Contains all the fields from the Risk Tab in the deal Notebook that may be changed via the Deal Change Transaction (although they must also be set to yes in Deal Change Field Protection Association Table in order to be available for change).

Field Name	Req/Opts	Size/Format	Rules
Previous OK To Fund	Conditional	Indicator (checkbox)	Displays the current setting from the Deal Notebook, either *Yes* (checked) or *No* (unchecked).
Include Collateral in Borrowing Base	Optional	Indicator (check Box)	Beginning with Release 6.0.10.05 and forward, the following Linking Collateral to Limits and Calculation of Availability functionality applies: User may change the previous setting from *No* (unchecked) to *Yes* (checked) or vice versa.
OK To Fund	Optional	Indicator (checkbox)	User may change the previous setting from *No* (unchecked) to *Yes* (checked) or vice versa.
Drawdown Limits			
Previous Maximum Number of Loans	Conditional	Max 2 digits	Displays the current Maximum Number of Loans from the Deal Notebook.
Maximum Number of Loans	Optional	Max 2 digits	Allows entry of a new Maximum Number of Loans for the deal
Previous Maximum	Conditional	Max 2 digits	Displays the current Maximum number of

Number of Matchfunded Loans			Matchfunded Loans from the Deal Notebook.
Maximum Number of Matchfunded Loans	Optional	Max 2 digits	Allows entry of a new Maximum Number of Loans for the deal.
SBLC Restrictions			
Previous Last Issuance By Date	Conditional	Date	Displays the current Last Issuance By Date for the deal.
Last Issuance By Date	Optional	Date	Allows entry of a new Last Issuance By Date for the deal. Must be greater than the deal-closed date and less than Usage Expiration Date (if one exists).
Previous Usage Expiration Date	Conditional	Date	Displays the current Usage Expiration Date for the deal.
Usage Expiration Date	Optional	Date	Allows entry of a new Usage Expiration Date for the deal. Must be greater than Last Issuance By date (if one exists).

Events Tab

Attribute	Req/Opt	Size/Format	Rules
Event	System Generated	Table: Event Type	Displays list of system generated events for the Deal Change Notebook. Displays the system created date and time, Create User ID, Effective Date (Loan IQ business date), and any comment related to the event.
Export Events	Optional	Button	Allows user to export the Notebooks events to a text file.
Print Events	Optional	Button	Allows user to print events.
Event Details: Displays details of highlighted event			
Event		System Generated	Displays the name of the Event.
Effective Date	Conditional	Button	Available only for Events that may have their Effective Dates changed. Button will be disabled if the event cannot have its Effective Date Changed.
Comment	System Generated		Describes details of the highlighted event, as defined on the events code table. Cannot be modified by the user.
User	Optional	Button	Displays name and User ID of the person responsible for creating the event.

Note: Beginning with Loan IQ Release 6.0.07.08, when a Manual General Ledger, Manual Funds Flow or Manual Cashflow is created from the Security ID of the Deal and released, that transaction is displayed as an event. Drill down on the event to view the Manual Transaction notebook.

Workflow Tab

The Deal Change Transaction will have the following Workflow Items with the standard Loan IQ workflow behavior: Send to Approval, Approve and Release.

Comments Tab

Allows entry of a free form user comment. May be updated at any time prior to the approval of the Deal Change Transaction.

MIS Codes Tab

Available in Release 7.4.2, when licensed for Asset Based Lending, the following functionality applies. A new tab "MIS Code" is introduced in the Deal Change Transaction Notebook to allow the user to update any field under (Asset Based Lending).

Attribute	Req/Opt	Size/Format	Rules
Previous ABL Rules			
Collection Days Applies	Optional	Indicator (Checkbox)	Displays the current value of **Collection Days Applies**.
Collection Days Options	Conditional	Drop down	Displays the current value of the **ABL Collection Days** option.

Update Collateral Value on Principal Payment	Optional	Indicator (Checkbox)	Displays the current value of the **Update Collateral Value On Principal Payment**.
Payment Application Priority Hierarchy	Optional	Button	Displays the current **Payment Application Priority Hierarchy Selection List** window.

Payment Application Priority Hierarchy Selection List Window (Old)

Attribute	Req/Opt	Size/Format	Rules
Available	Optional	List (showing multiple attributes)	Displays the current list of Loan Outstandings to be included in the Payment Application Priority Hierarchy
Selected	Optional	List (showing multiple attributes)	Displays the current hierarchy of the selected Loan Outstandings for Payment Application Priority Hierarchy.
Search	Optional	Text box	This Search capability assists the user to choose a particular loan outstandings under the deal.
OK	Optional	Button	This button is Disabled
Cancel	Optional	Button	This button cancels any changes made in the window.
New ABL Rules			
Collection Days Applies	Optional	Indicator (Checkbox)	Allows a change for the **Collection Days Applies** option**.**
Collection Days Options	Optional	Indicator (Checkbox)	Allows any change in the ABL Collection Days Options.
Update Collateral Value on Principal Payment	Optional	Indicator (Checkbox)	Allows a change for the **Update Collateral Value on Principal Payment option**.
Payment Application Priority Hierarchy	Optional	Button	Allows a change in setting up the hierarchy of the loan outstandings in the **Payment Application Priority Hierarchy Selection List**.

Payment Application Priority Hierarchy Selection List Window (New)

Attribute	Req/Opt	Size/Format	Rules
Available	Optional	List (showing multiple attributes)	Allows a change in list of Loan Outstandings to be included in the Payment Application Priority Hierarchy
Selected	Optional	List (showing multiple attributes)	Allows a change to the hierarchy of the selected Loan Outstandings for Payment Application Priority Hierarchy.
Search	Optional	Text box	This Search capability assists the user to choose a particular loan outstandings under the deal.
OK	Optional	Button	This button confirms and saves the hierarchy.
Cancel	Optional	Button	This button cancels any changes made in the window.

Available in Release 7.4.3, when licensed for **Asset Based Lending**, the following functionality applies:

Attribute	Req/Opt	Size/Format	Rules
Previous ABL Rules			
Auto Sync with ABL Collateral Module	Optional	Button	Displays the current value of Auto Sync with ABL Collateral Module
New ABL Rules			
Auto Sync with ABL Collateral Module	Optional	Button	Allows a change for the Auto Sync with ABL Collateral Module

Deal Change Transaction Notebook – File Menu

Access to the following actions is provided under the **File** menu in the Deal Change Transaction Notebook:

Save

Delete

Exit

Save

Saves the Deal Change Transaction Notebook.

Delete

Deletes the Deal Change Transaction.

Exit

Closes the Deal Change Transaction Notebook. If the transaction has been modified, it will prompt the user to save the changes before closing.

Deal Change Transaction Notebook – Options Menu

Access to the following actions is provided under the **Options** menu in the Deal Change Transaction Notebook:

Inquiry/Update

Deal Notebook

Inquiry/Update

Changes the status of the Deal Change Transaction Notebook. If the Notebook is in *Update* mode then Inquiry will be available for selection. If the Notebook is in *Inquiry* mode then Update will be available for selection.

Deal Notebook

Opens the Deal Notebook.

Deal Change Transaction Notebook – Status Menu

Access to the following actions is provided under the **Status** menu in the Deal Change Transaction Notebook:

Approve

Cancel

Release

Return to Awaiting Send to Approval

Send to Approval

Show Approval Status

Approve

Approves the transaction.

Cancel

Cancels the transaction.

Release

Releases the transaction.

Return to Awaiting Send to Approval

Changes the status of the transaction to *Awaiting Send to Approval*.

Sends to Approval

Sends the transaction for approval.

Show Approval Status

Opens the *Transaction Approval Status* window.

Beginning with Release 5.5.07.08 (Patch) and Release 5.5.10.02 and forward, as per the separately licensed enhancement entitled Processing Area and Deal Classification Combination Error Message, the following functionality applies:

A deal change transaction cannot be sent for approval, approved or released unless the new Branch, Processing Area and Deal Classification code table contains an active row for the combination of deal branch, deal processing area and the new deal classification code.

“Send to Approval” also performs the same validation as described above.

“Release” also performs the same validation since the code table could have been changed between the time the transaction was approved and the time it is released.

Notes: If the classification, branch and processing areas are not subject to the deal change transaction, as defined in the Deal Change Field Protection Association code table, when changing the Classification, Branch and/or Processing Area directly on a closed deal, the same validation must take place for the new values as defined in Deal Closing.

When performing deal amendments which add new facilities to a closed deal, validation is done at send to approval, approve and release. This validation uses the combination of facility branch, facility processing area and deal classification to ensure the new Branch, Processing Area and Deal Classification code table contains an active row for the combination of the new facility branch, new facility processing area and deal classification code.

“Send to Approval”/ Approval also performs the same validation as described above.

“Release” also performs the same validation since the code table could have been changed between the time the transaction was approved and the time it is released.

Deal in Pipeline

Deal in Pipeline Option is available to all active deals. It is not available to cancelled or terminated deals. Selecting this Option brings up a window with a list of *Deal in Pipeline* events, an Effective Date set to current date, and an optional comment. User selects one *Deal in Pipeline* event from the list and may override the effective date to an earlier date.

User may later drill down on the logged event to change its **Comment** and/or **Effective Date**, or may change the Effective Date by selecting **Effective Date** button.

Attribute	Req/Opt	Size/Format	Rules
Deal in Pipeline Event	Required	Table: Deal Event Type	Select one Deal in Pipeline Event from list of (active) codes. No default.
Effective Date	Required	Date	Defaults to current business date and may be overridden to any earlier date.
Comment	Optional	256 Char	Free form comment may be entered.
Amendment #	Optional	5 Char	User can enter number of applicable amendment, if any.

Deal Servicing Group Details

Choosing this option brings up a selection of **Lender Servicing Groups** for the entire deal, which includes all lenders with **Facility Lender Shares**.

The **Country of Governing Law** drop-down list indicates the default country associated with the branch of the Admin Agent in the Deal, but that country can be overridden (with proper security permissions). Possible drop-down options are populated by the Country table in Table Maintenance. Only one country per Deal can be set and saved as the Country of Governing Law.

Listing includes Lender Name, Location, Servicing Group Name, Alias, and Tax Country (if separately licensed for Tax Information at Lender Level enhancement available in Release 7.2.6). Drilling down on a Lender Servicing Group brings up the *Deal Servicing Group Details* window. Deal, Lender Name, Servicing Group Name and Alias, Location, Role, From and To (optional), Tax Withholding Required (Y/N) and Tax Withholding percent are displayed. Preferred Remittance Instructions window displays any Preferred Remittance Instructions that have been chosen for this Lender Servicing Group. Preferred Remittance Instructions can be changed via the **Add** or **Delete** buttons. **Any changes to Preferred Remittance Instructions made on the *Deal Servicing Group Details* window will be reflected wherever that Lender Servicing Group is used, throughout the deal.**

Details Servicing Group Details Screen

Available in Release 6.0.10.05, the following separately licensed Withholding Tax for Capital Gains functionality applies.

The Gross-Up field has been added, which indicates whether *Gross-Up* or *Net* method of Withholding Tax is applicable for the Lender.

If this indicator is set to *Y*, the *Gross-Up* method of Withholding Tax is applicable for the Lender, i.e., the Borrower will bear the Withholding Tax on the Interest payable to such Lender. If this indicator is set to *N*, the *Net* method of Withholding Tax is applicable for the Lender, i.e., the Borrower will not bear the Withholding Tax on the Interest payable to such Lender.

This indicator is enabled for user entry only if the value of the **Interest Tax Withholding** indicator in the *Deal Servicing Group Details* screen is set to *Y*. This indicator is protected for user entry if the value of the **Interest Tax Withholding** indicator in the *Deal Servicing Group Details* screen is set to *N*.

The default value for this field is *N*.

The value for the new *Gross-Up* indicator can be changed by any user who has *Update* authority for the Deal notebook. Such changes are allowed regardless of the status of the Deal.

Whenever the value of the new *Gross-Up* indicator is modified by the user, the following functionality applies:

Loan IQ should arrive at the sum of the Facility Available Commitment of all the Lenders who are under the *Gross-Up* method of Withholding Tax.

Loan IQ compares the sum of the Facility Available Commitment arrived at above with the “Gross-Up Cap Amount”.

If the sum of the Facility Available Commitment arrived at above is more than the “Gross-Up Cap Amount”, Loan IQ displays the following hard error and does not allow users to proceed further:

“The sum of the Facility Available Commitment of Lenders, who are under the “Gross-Up” method of Withholding Tax, cannot be more than the “Gross-Up Cap Amount”.

If the sum of the Facility Available Commitment arrived at above is less than or equal to the “Gross-Up Cap Amount”, Loan IQ allows users to proceed further.

Available in Release 6.0.10.05, the following separately licensed Withholding Tax for Capital Gains functionality applies.

Withholding Tax Rate Schedule button is added. This button opens the Withholding Tax Rate Schedule window and users can maintain the Withholding Tax Rates applicable for different periods of time for calculation of Withholding Tax on Interest Payments to every Lender. The button provides users the ability to maintain a “Withholding Tax Rate Schedule” applicable to a Lender at the Deal level. Via this new button, users are able to maintain different Withholding Tax Rates applicable for different periods of time. Once this Withholding Tax Rate Schedule is maintained, the applicable Withholding Tax Rate is applied by Loan IQ for calculating the Withholding Tax on Interest payments.

Note: In case of Deals, which pre-exist when the license for this enhancement is turned on, all the functionality defined in this enhancement is available when the license for this enhancement is turned on. All the new fields defined in this enhancement are available in pre-existing Deals, with their respective default values. The Withholding Tax Rate Schedule should not have any rows and the Withholding Tax rate should be considered as zero, however, the “Interest Payment Transactions History” in pre-existing Deals should be available only for those Interest Payment Transactions, which are released at the time when the license for this enhancement is turned on.

If the license for this enhancement is turned off, the Withholding Tax Rate for pre-existing Deals does not default to the Withholding Tax Rate, which pre-existed prior to turning on the license for this enhancement.

With the separately licensed **Tax Information at Lender Level** enhancement, the existing Tax Withholding and Tax Rate fields are disabled.

Apportion VAT

Available in Release 7.3.1.8

As part of VAT Assessments Due from Borrower on Interest and Fees Payments functionality, Apportion VAT checkbox allows the user (bank) to apportion the Fees and VAT to the lenders in a deal.

Depending upon the consortium type contract (internal or external) set for a deal, VAT apportion to the lenders is decided.

If the deal type is internal consortium, Loan IQ indicates whether VAT should be apportioned for each lender in the deal.

If the deal type is external consortium, Loan IQ does not apportion VAT to the lenders in the deal.

Available in Release 7.3.1.16

Loan IQ restricts the user to apportion VAT only to the local banks. As part of this validation, Loan IQ checks if the lender and the borrower have the same country in their legal address country at the buy and the sell level. It also checks at the deal level if a user modifies the appointment setting.

In Deal Service Group Details window, when the user selects the **Apportion VAT** checkbox, Loan IQ validates the VAT can only be apportioned to the local banks in a host bank or a non-host bank deal. The user can apply VAT apportion only to the local banks in a host bank or a non-host bank deal.

When the user selects Apportion VAT checkbox for a lender in a host bank or a non-host bank agented deal; or for a lender in a circle notebook, Loan IQ checks if the legal address country of lender and borrower matches.

If the legal address country matches, Loan IQ apportions VAT for that lender.

If the legal address country does not match, Loan IQ provides a warning that the lender may not have been VAT apportioned.

For more details on VAT apportioning to local banks, refer *Misys Fusion Loan IQ Online Help > Deal > VAT Assessments Due from Borrowers on Interest and Fee Payments > VAT Apportioning – Local Banks Only section*.

Available in Release 7.4.0.1, the following Notice Type Preference functionality applies:

In the **Notice Type Preference** field, a new checkbox "**Enable Data**" is presented to allow agent banks to identify on a deal-by-deal basis if the lender should receive notices via FpML, fax or e-mail.

The user is required to toggle the "**Enable Data**" checkbox at the Deal Serving Group Details window in order to send out messages via both FpML & Faxes/Email. If you change the Notice Type Preference from *Data and/or Faxes/Email* to any other type, the "*Enable Data*" check box is disabled. The only way to enable the "*Enable Data*" check box is to set the Notice Type Preference back to *Data and/or Faxes/Email* in the Customer Notebook.

Withholding Tax Rate Schedule Window

Available in Release 6.0.10.05, the following separately licensed Withholding Tax for Capital Gains functionality applies.

The Withholding Tax Rate Schedule window is used to maintain the Withholding Tax Rates applicable for different periods of time for calculation of Withholding Tax on Interest Payments to every Lender. The window is similar to and has the same functionality as currently available in any History window in Loan IQ. This new window has three fields:

(i) Withholding Tax Rate – Withholding Tax Rate applicable for that row in the "Withholding Tax Rate Schedule" window

(ii) Start Date – Start Date of the row in the "Withholding Tax Rate Schedule" window

(iii) End Date – End Date of the row in the "Withholding Tax Rate Schedule" window

This window has "OK", "Print", "Export", "Insert" and "Exit" buttons, which have the same functionality these buttons currently have in any of the History screens in Loan IQ.

When the value for the "Interest Tax Withholding" is set to "Y" for the first time the "Withholding Tax Rate Schedule" does not have any value and the Withholding Tax Rate is considered as 0% until a new row is added to the "Withholding Tax Rate Schedule".

The Withholding Tax Rate can be changed by drilling down on any row in the "Withholding Tax Rate Schedule" window or via the "Insert" button in the "Withholding Tax Rate Schedule" window, similar to the current functionality available in any of the History windows anywhere in Loan IQ. Whenever the Withholding Tax Rate is changed and if such change involves a change in the Start Date of any row in the "Withholding Tax Rate Schedule" window, a new row is created. If the Withholding Tax Rate is changed without involving a change in the Start Date of any row in the "Withholding Tax Rate Schedule" window, no new row is created, but the existing applicable row is updated. The End Date of any row in the "Withholding Tax Rate Schedule" window is calculated as one day minus the Start

Date of the next row in chronological order in the "Withholding Tax Rate Schedule" window, similar to current Loan IQ functionality.

Changes to the Withholding Tax Rate Schedule for a prior period does not have any impact of the Withholding Tax on Interest Payment transactions which are already released.

The "Withholding Tax Rate Schedule" can be changed by any user who has "Update" authority for the Deal notebook. Such changes are allowed regardless of the status of the Deal.

The Withholding Tax Rate Schedule is used for calculation of Withholding Tax on Interest Payments as follows:

Withholding Tax Rate Schedule maintained		
Start Date	End Date	WHT Rate
Feb 1, 2011		10%
Jan 1, 2011	Jan 31, 2011	12%

Interest Accrual Frequency of Loan 1	Quarterly (from Jan 1, 2011 to Mar 31, 2011)
Withholding Tax Rate applicable	For the portion of the Interest pertaining to the period Jan 1, 2011 to Jan 31, 2011 – 12%
	For the portion of the Interest pertaining to the period Feb 1, 2011 to Mar 31, 2011 – 10%

Available in Release 6.0.10.05, the following separately licensed Withholding Tax for Capital Gains functionality applies.

The Interest Tax Withholding Percent field is converted to a display only field and populates the current Withholding Tax Rate from the "Withholding Tax Rate Schedule".

Note: In case of Deals, which pre-exist when the license for this enhancement is turned on, all the functionality defined in this enhancement is available when the license for this enhancement is turned on. All the new fields defined in this enhancement are available in pre-existing Deals, with their respective default values. The Withholding Tax Rate Schedule should not have any rows and the Withholding Tax rate should be considered as zero, however, the "Interest Payment Transactions History" in pre-existing Deals should be available only for those Interest Payment Transactions, which are released at the time when the license for this enhancement is turned on.

If the license for this enhancement is turned off, the Withholding Tax Rate for pre-existing Deals will not default to the Withholding Tax Rate, which pre-existed prior to turning on the license for this enhancement.

The change to Preferred Remittance Instructions can **also** be made from the **Deal Servicing Group** option on *Facility Lender Shares* window and the *Loan Lender Shares* window**. From both the Facility and Loan Levels, the change in Remittance instructions will be Deal-wide.**

Note: Deal Servicing Group Details selected at the Facility or Loan level will list **only** lenders with shares of this Facility or the Facility to which this Loan belongs.

Note: Lender Servicing Groups defined on the Bank Roles Tab (SBLC and BA Issuing Banks, Swingline Banks, Bid Banks) **are not included,** even if they have shares in existing outstandings.

Tax indicators and associate fields - are not displayed on the *Deal Servicing Group Details* window with **Withholding Tax Rate Calculation** separately licensed enhancement, available as a patch to Release 6.0.10.05 and when system parameter **HBATW** is set to *Y*.

Declare Events

Manually entered deal events are optional. To enter, the user chooses a manual event type from the drop down list of event titles (no default), an effective date and an optional comment and/or amendment number. Specific edit validation rules are defined under Events tab. Manually entered deal events may be deleted by the user. **If user enters an Amendment Number to indicate the manual event is associated with that deal amendment, system will check that the indicated amendment number actually exists).**

Effective Date defaults to current date, but may be overridden to an earlier date before save, and may be changed later by drilling down on the event or choosing Effective Date button on the Events tab. User may also drill down on the logged event to change its Comment.

Attribute	Req/Opt	Size/Format	Rules
Event	Required	Table: Deal Event Type	Select one Event from list of (active) codes. No default.
Effective Date	Required	Date	Defaults to current business date and may be overridden to any earlier date.
Comment	Optional	256 Char	Free form comment may be entered.
Amendment #	Optional	5 Char	User can enter number of applicable amendment, if any.

Facilities

Brings up the Facility Navigator, listing all facilities in the deal. User may drill down on a selected facility to see facility details or, if deal belongs to one of the user's processing areas, may add a new facility. Facility Name, Status, Currency, Global Closing Commitment, Global Current Commitment, Bank Closing Commitment, Bank Contractual Gross, Bank Net, Expiration Date, Maturity Date, EURO Spread, LIBOR Spread, Facility Fee, Unutilized Fee, Facility Type and Facility Control Number (FCN) are displayed for each listed facility.

Totals are displayed for all facility amounts, as long as all facilities in the deal share the same facility currency, and are suppressed on multi-currency deals.

In addition, with focus on a selected facility, the user may choose any of the following twelve optional buttons: **Portfolio Positions, Lender Shares, Add, Print, Outstanding Select, Browse Pricing, Fees and Spreads, Export, Outstandings, Amortization Schedule, Ongoing Fees** and **Exit**, and bring up the requested information for the indicated facility without having to enter the Facility Notebook itself.

Note: Status shown for each listed facility is populated as listed below:

Deal Status	Facility Effective Date	Facility Status	Status Shown Facilities Window
Pending	Any	Any	Pending
Awaiting Approval	Any	Any	Pending
Approved	Any	Any	Pending
Closed	None	Any	Pending
Closed	>Today	Any	Pending
Closed	<=Today	Any	Active
Terminated	Any	Any	Terminated
Any	Any	Terminated	Terminated

Note: Separately Licensed Enhancement Release 6.0.08.02, Tax Withholding and Tax Refund applies: Tax Refund Rate can be entered at the Facility Borrower level in order to have this information available for reporting purposes. Entry of the Borrower Tax Refund rate is optional.

Note: Available in Release 7.3.1, when licensed for Deferred Accruals enhancement, the following functionality applies:

The option allows the user to choose Deferred Accruals of Interest and Fee for the Facility, i.e. accruals are calculated based on balances as on the previous day or current day.

A Facility level parameter determines whether the interest and fee accruals should be based on previous day's balance or current day's balance.

The parameter is available on the facility notebook.

Clear (Not selected) checkbox is the default indicator status.

Option to enable deferred accruals can be done while creating a new or pending facility.

User cannot modify the option at facility level for an active or closed facility

The indicator is disabled in a terminated facility

Also, note that the Deferred Accruals feature is an exclusive functionality and cannot co-exist with the license for Accrual Effective Date + 1 day enhancement.

Available in 7.4.1.0, with the separately licensed enhancement *Origination Cost*, at the time of Deal close, Loan IQ displays a warning message for the creation of APOCA - Automatic Portfolio Origination Cost Transaction for a single currency Facility (USD).

Bank Group Addressed Notice

Allows the user to create a free-form Notice to be sent to, if Host Bank is Agent or Sole Lender, any Servicing Groups associated with this Deal that have a non-zero Commitment Amount (including the **Borrower's** Servicing Group). If Host Bank is not Agent, the free-form Notice is prepared for all Participant Servicing Groups with non-zero Commitments. Notices sent prior to deal close will included **pending** as well as **closed** lenders in the deal. Once generated, these Deal Addressed Group Notices may be accessed via **Query→Notices**.

Credit Contact Addressed Notice

Allows the user to create a group of *Credit Contacts* and subsequently create free-form Notices to send to this group of Credit Contacts. Contact Groups and Notices can be created for any group of Contacts set up in the Customer Notebook for all Customers (regardless of Profile Type) attached to the Deal. A Contact is not required to possess a Credit purpose to become part of a Credit Contact Group. Notices can be generated for either Closed or Non Closed Deals and may include or exclude Zero Lender Share Amounts. To become part of a Credit Contact Grouping a Guarantor must have an Active Guarantor profile in the Deal, likewise for Beneficiaries, and Borrowers. Credit Contact Addressed Notices sent prior to deal close will include **pending** as well as **closed** lenders in the deal. Once generated, these Credit Contact Addressed Notices (which fall under the Notice category of Deal Addressed Notices) may be accessed via **Query→Notices**.

Credit Contacts Window

This window is used to Add and Maintain Groups of Credit Contacts.

Add Credit Contacts – When entering this window for the first time no Credit Contacts data will exist. Once a Credit Contact Group has been added and saved the following Validations will apply.

When entering this window in *Inquiry* mode only the **Filter**, **OK**, and **Cancel** buttons will be available.

Attribute	Req/Opt	Size/Format	Rules
Add	Optional	Button	Brings up the *Add Credit Contacts* Window for this deal.
Remove	Optional	Button y	If User selects **Remove** without a line item being highlighted an Error message will be returned. Highlighting any line item (in expanded or collapsed form) and selecting **Remove** will remove the line from the window.
Filter	Optional	Button	Selection of the **Filter** button without an existing Credit Contact Group will result in an Error that no Contacts are available for Processing. Where a Credit Contact Group exists, the **Filter** button provides a Warning that continuing will Save changes and takes the User to the *Filter Contacts* window.
Expand All	Optional	Button	Expands this window to show all Contacts against a Customer Profile record, with the corresponding Facility and Include details.
Collapse All	Optional	Button	Collapses this window to show a line item for every Customer Profile type in the Deal.
OK	Optional	Button	Where changes are made **OK** prompts the User to Save any Unsaved changes then returns them to the Deal Notebook.
Cancel	Optional	Button	Where changes are made **Cancel** will return the User to the Deal Notebook after prompting them to Save any Unsaved changes. Where no changes are made **Cancel** returns the User to the Deal Notebook.
Profile	Column	Display list of Profiles	A Profile Line (sorted alphabetically) will appear for every Profile saved in the Credit Contact Group. Profile entries can be expanded to show Customers, Contacts, Facilities and Include.
Customer	Column	Display list of Customers	Expanding the Profile entry displays (in the Customer column) all active Customer records that were saved in the Credit Contact Group, in alphabetical order, and against the relevant Profile.
Contact	Column	Display list of Contacts	Expanding a Customer entry (in the Profile column) displays in the Contact column all Credit Contacts for that Customer.
Facility	Column	Display list of Facilities	Expanding a Contact entry displays in the Facility column all Facilities pertinent to the Customer.
Include	Column	Display	Expanding a Contact entry displays all Facilities in the Deal and defaults *Yes* into the Include column against a Facility record. *Yes* signifies that the Contact will be sent a notice even where the filters (see *Create Filters Edit & Validation Rules*) would otherwise preclude the contact from the list. *No* would prevent the contact from receiving a notice.

Add Credit Contacts Window

Appears when user selects Add from the *Credit Contacts* window.

Attribute	Req/Opt	Size/Format	Rules
Profile	Column	Display List of Profiles	Displays an alphabetical List of all Profiles attached to Customers in the Deal. Profiles can be expanded to show all Lenders in the Deal with (or without, see exclude Zero Lender Share position attribute below) a Zero Lender Share position. All Profile records can be expanded.
Customer	Column	Display List of Customers	Displays (when a Profile entry is expanded) an alphabetical List of Customers (against each profile), for selection, attached to the Deal. Where a Customer has more than one profile in a Deal a line item will appear under each profile. Unless a Profile entry is expanded, the Customer Column will contain no entries.
Contact	Column	Display List of Contacts	Displays (when a Profile and Customer record is expanded) a List of all Active Contact records for selection, for that Customer (independent of Primary purpose).
Phone	Column	Display List of Phone Numbers	Displays (when a Profile and Customer record is expanded) a List of phone numbers against the relevant Contact(s). Where no phone number is specified in the Customer Contact record, the Phone number (where input) of the Customer Profile Location Legal Address will default.
Fax	Column	Display List of Fax Numbers	Displays (when a Profile and Customer record is expanded) a List of Fax numbers against the relevant Contact(s). Where no fax number is specified in the Customer Contact record, the Fax Number (where input) of the Customer Profile Location Legal Address will default.
Purpose	Column	Display List of Contact Purposes	Displays (when a Profile and Customer record is expanded) a List of the Primary Purpose, as defined in the Customer Contact Notebook, against a Contact record.
Include Zero Lender Share Position	Optional	Radio Button	Where checked, those Customers with a Lender profile, and a Zero Lender Share position in the Deal (at the time of checking this box) will become available for inclusion (if selected) to the Credit Contact group being created.
Exclude Zero Lender Share position	Default	Radio Button	Default. Where checked, those Customers with a Lender profile, and a Zero Lender Share position in the Deal (at the time of checking this box) will be excluded from inclusion to the Credit Contact Group being created.
Expand	Optional	Button	Where one or more Profile record(s) are highlighted and **Expand** is selected, a line item for all Customers in the Deal, with this Profile Type, will appear. Where one or more Customer record(s) are highlighted and **Expand** is selected, a line item for all Contacts (with corresponding phone, fax, and purpose details), for this Customer, will appear.

Expand All	Optional	Button	Expands this window to show all Contacts against a Customer Profile record, with the corresponding Phone, Fax, and Purpose details.
Collapse	Optional	Button	Where one or more Customer record(s) are highlighted and **Collapse** is selected, all underlying Contact, phone, fax, and purpose details will be collapsed to the Customer line item level. Where one or more Profiles are highlighted and **Collapse** is selected, all Customer records underlying this Profile will be collapsed.
Collapse All	Optional	Button	Collapses this window to show a line item for every Customer Profile Type in the Deal.
OK	Optional	Button	Returns the User to the *Credit Contacts* window with changes noted (but not applied). Note; to apply the changes made on the *Add Credit Contacts* window, **OK** on the *Credit Contacts* window must also be selected.
Cancel	Optional	Button	Returns the User to the *Credit Contacts* window with no changes applied.

Filter Contacts Window

Appears when the User selects *Filter* from the *Credit Contacts* window. The User can enter this window without creating (and Saving) a Group of Credit Contacts and will then receive all Credit Contacts for all Customer Profiles in the Deal. When a Group of Credit Contacts has been Saved, this window populates into the Filters, only the data relevant to the saved group of Credit Contacts.

Attribute	Req/Opt	Size/Format	Rules
Show Zero Lender Share position	Optional	Tick Box	Optional. The Default. When checked, Customers in the Deal with a Lender profile, and Zero Lender Share position in the Deal at the time of checking the box, will be included in the Filters outlined below. Can be selected in conjunction with one of *All Lenders in Deal*, *All Primaries/Assignees in Deal*, or *All Participants in Deal*. Note: This default will not over-ride the Filter *Exclude/Include Zero Lender Share position* set on the *Add Credit Contacts* window.
All Lenders in Deal	Optional	Radio Button	Default. All Customers (with an Active Lender profile in the Deal will appear in the Customer Filter along with their underlying Contacts and the Facilities to which they are attached.
All Primaries/Assignees in Deal	Optional	Radio Button	Optional. All active Primaries/Assignees in the Deal will appear in the Customer Filter along with their underlying Contacts and the Facilities to which they are attached.
All Participants in Deal	Optional	Radio Button	Optional. All active Participants in the Deal will appear in the Customer Filter along with their underlying Contacts and Facilities to which they are attached.
Available Customers	Conditional	Display List of Available Customers	System Generated. Provides an alphabetical List of all Customers attached to the Deal that meet the specified criteria of Credit Contact Group, Zero Lender Share position, Lenders, Participants, Primaries /Assignees in the Deal.

Available Facilities	Conditional	Display List of Available Facilities	System Generated. Provides an Alphabetical List of all Facilities to which the Customers, who meet the *Available Customers* selection criteria are attached.
Available Contact Purposes	Conditional	Display List of Available Contact Purposes	System Generated. Provides an alphabetical List of Contact Purposes found for all Contacts attached to the **Available Customers** selection list.
Selected Customers	Conditional	Display List of Selected Customers	System Generated. Provides an alphabetical List of Customers selected (by the User) from the **Available Customers** list.
Selected Facilities	Conditional	Display List of Selected Facilities	System Generated. Provides an alphabetical List of Facilities selected (by the User) from the **Available Facilities** List.
Selected Contact Purposes	Conditional	Display List of Selected Contact Purposes	System Generated. Provides an alphabetical List of Contact Purposes selected (by the User) from the **Available Contact Purposes** list.
Final List of Contacts	Conditional	Display List of Final Contacts	System Generated. Provides the List of Contact Names for all Contacts that meet the Filters and Conditions described above.
OK	Optional	Button	Takes the User to the *Process Contacts* window.
Cancel	Optional	Button	Returns the User to the *Credit Contacts* window with no changes Saved.

Process Contacts Window

Appears when the User selects **OK** from the *Filter Contacts* window. This window is available to Users with both *Inquiry* and *Update* access and displays the detail of all Contacts in the final Credit Contact List.

Attribute	Req/Opt	Size/Format	Rules
Profile	System Generated	Display List of Profiles	Displays against each Contact in the final selection list, the Profile relevant to that Customer. Where a Customer has more than one Profile in the Deal, a Profile (and Contact) record will appear for each record.
Customer	System Generated	Display List of Customers	Displays against each Contact in the final selection list, the relevant Customer name. Where a Customer has more than one Profile in the Deal the Customer Name will be repeated for every Contact with that Profile.
Contact	System Generated	Display List of Contacts	Displays the Contact Names of all Contacts in the final List of Contacts. Where a Customer has more than one Profile in the Deal a Contact Name record will appear under each Profile.
Purpose	System Generated	Display List of Purposes	Displays the Primary Purpose for all Contacts in the final List of Contacts.
Phone	System generated	Display List of Phone Numbers	Displays the Phone Number for all Contacts in the final List of Contacts. Where no Phone Number exists on the Customer Contact record, this field will remain blank.
Fax	System	Display List of	Displays the Fax Number for all Contacts in the

	Generated	Fax Numbers	final List of Contacts. Where no Fax Number exists on the Customer Contact record, this field will remain blank.
Generate Notices	Optional	Button	Brings up the *Create Group Addressed Notices* window.
Print	Optional	Button	Brings up a *Printer Selection* window to print the Credit Contact Data to. Note: The address displayed is the address associated with the mail notification method in Customer Profile.
Export	Optional	Button	Brings up an Operating System *File Selection* window for the User will designate a directory to Export the Credit Contact data. Note: The address displayed is the address associated with the mail notification method in Customer Profile.
Exit	Optional	Button	Returns the User to the *Filter Contacts* window with no Saved changes.

Create Group Addressed Notices

Appears when the User selects Generate Notices from the *Process Contacts* window. This window is used to create a Freeform Group Addressed Notice for the final list of Credit Contacts.

Attribute	Req/Opt	Size/Format	Rules
Re	Required	150 char	The Deal Name defaults into this field. User may override Deal Name and enter up to 150 characters.
Text	Required	User Defined	Freeform text entry field.
Create	Optional	Button	Takes the User to the Deal Addressed Group created by (User Name) on (Date). From this point the standard Notice functionality applies [see the *Misys Loan IQ Notices Edit & Validation Rules*.]
Cancel	Optional	Button	Returns the User to the *Process Contacts* window.

Bill Care Of Contact

Note: Available in Release 7.3.1, when licensed for CO Address On Billing enhancement, the following functionality applies:

This indicator allows the bank to send a bill to a separate third party 'Care Of' address whilst including the legal name and address of the primary borrower on the same bill. This option is available for new deals as well as pending deals.

On a pending Deal notebook, the 'Bill Care of Contact' checkbox is available on the 'Pricing Rules' tab. This does not require any validation prior to sending the Deal to Approval.

Validations for a Pending Deal:

If the 'Bill Care of Contact' is selected, but the Primary Borrower Servicing Group does not have a Contact with the Purpose Code – 'Care of Contact', a hard error occurs - "Bill Care of contact has been checked, but no Care-of contact has been set up for the primary borrower servicing group. You

will have to set up a Care-of contact for the primary borrower or uncheck The 'Bill Care-of Contact' indicator in order to close this deal".

When 'verifying' a pending Deal, if a 'Care of Contact' contact purpose exists in PRIMARY Borrower Servicing Group but 'Bill Care Of Contact' is not selected, then the following warning message appears - "A Care-of contact has been set up for the primary borrower servicing group, but the deal has been set up not to use the Care-of contact for billing. Do you wish to continue?"

If the Deal being closed has the 'Bill Care of Contact' selected but the Primary Borrower Servicing Group does not have a Contact with the Purpose Code – 'Care of Contact', a hard error occurs stating –"Bill Care of contact has been checked, but no Care-of contact has been set up for the primary borrower servicing group. You will have to set up a Care-of contact for the primary borrower or uncheck The 'Bill Care-of Contact' indicator in order to close this deal".

When closing a Deal, if a "Care of Contact" contact purpose exists in the PRIMARY Borrower Servicing Group but the 'Bill Care Of Contact' is not selected, then the following warning message appears - "A Care-of contact has been set up for the primary borrower servicing group, but the deal has been set up not to use the Care-of contact for billing. Do you wish to continue?"

Validations for a Closed Deal:

The 'Bill Care of Contact' checkbox is also available on the Pricing Rules Tab on a Closed Deal.

If the "Bill Care of Contact" is selected but the 'Care of' Purpose Contact doesn't exist in the Primary Borrower Servicing Group, then the following hard error occurs - "Bill Care-of Contact may not be checked because the servicing group does not include a care-of contact."

When the license is on the Deal, the 'Care Of' Contact defaults to N. The same is applicable to a Facility, Outstanding and at all other places where the checkbox is available.

Lender Copy Transaction

This is separately licensed functionality that enables the user to copy lenders from an existing deal to a pending deal. This option is only available for pending deals. The Lender Copy Transaction Notebook allows a user to copy lenders from one facility in a source deal to any pending facility in the pending target deal. The source deal must be a closed deal and the target deal must be a pending deal. Upon selecting the source and target facilities and clicking on the **Copy Lenders from Selected Facility to Selected Target Facility** button, Loan IQ will copy the Lender Name, Servicing Group, Servicing Group Positions, Servicing Group Location, Upfront Fees, Primary Role in the Deal, and Skims from the source facility to the target facility. After successfully copying the lender information, users have the option of selecting the Risk Book for the Host Bank lender, changing Portfolio Allocations, tweaking lender shares, modifying Upfront Fees, modifying Bank Roles, changing Preferred Remittance Instructions, and changing Ongoing Fee Skims.

Licensed clients should refer to the *Misys Loan IQ Lender Copy - Setup & User Guide* and the *Misys Loan IQ Lender Copy Edit & Validation Rules* for further information. If you are not a licensed client and would like more information about the **Lender Copy** functionality, contact your Misys Loan IQ Account Manager.

Non-Agent Lender Adjustment

Option is available only to closed deals with non-zero Global Deal Amount when Host Bank is not the Agent. Selection of this option brings up the *Lender Share Adjustment* window displaying the contractual amounts of all lenders in the deal, and allows the user to quickly enter / adjust the lender contractual gross positions. While **primarily intended** to enter/adjust lender contractual gross positions on **Closed Non-Host Bank Deals**, it may also be used to adjust contractual gross amounts

on **closed** Host Bank Deals **as long as Host Bank is not the Agent**, although it **may not be used to adjust the Host Bank position** itself. **New** lender positions may not be added to a **Sole Lender** Deal.

Note: The Non-agent lender adjustment function supports multicurrency, to the extent that the aggregate Lender Deal Position is calculated and validated using the appropriate FX rates. For position adjustments in multicurrency deals, the aggregate Lender Deal Position **cannot** be entered, and pro-ration is **not** allowed; amounts can be entered **by facility only**, and the Lender Deal Position is automatically re-aggregated whenever any of the Lender facility amounts are changed. The currency of the Deal is displayed at the top of the window.

Non-Host Lender Share Adjustment Window

Attribute	Req/Opt	Size/Format	Rules
Deal Name	System Generated	Display	Deal Name is displayed in Title Bar.
Admin Agent	System Generated	Display	Displays the admin agent of the deal.
Last Review	Required	Date	User enters date on which the Lender Shares for this deal were last reviewed. No default. Cannot enter a future date. Window displaying current Last Review date pops up at every exit, and user is always asked if the date should be modified and saved (Yes/No/Cancel). Pressing **No** closes Non-Host Lender Share Adjustment but does not update Last Review Date or Last Reviewer ID. Pressing **Yes** will save the Last Review Date, save the User's ID as the Last Reviewer, and close the *Non- Host Lender Share Adjustment* window. Pressing **Cancel** will return to the *Non-Host Lender Share Adjustment* window.
Reviewer	Optional	Button	User ID of person who last updated the Last Review Date is noted beside the **Reviewer** button, and selecting the button displays the User ID, full name, and alias of the user.
Currency	System Generated	Display	Displays the currency of Deal
Lender Shares	System Generated	List Box: Short Name	Displays Short Name and Contractual Gross Amount for every lender in the deal. Drilling down on Non-Host Lender Positions brings up the *Share Adjustment* window for the selected lender. Drilling down on Host Bank Lender Position is not allowed.
Deal Amount	System Generated	System Amount Standard	Global Current Amount of the Deal.
Total Contractual Amount	System Generated	System Amount Standard	Total Contractual Amount of all Lenders in the Deal. Sums all existing circles for lender, including any Lender Share Adjustment records that already exist, and reflects any/all changes made to them. Appears in red if: Total Contractual Amount of all lenders in the deal is greater than Deal Amount Total Contractual Amount of all lenders in any

			facility in the deal is greater than the global amount of that facility. Warning (which user may override) is issued if user exits *Lender Share Adjustment* window when either of these conditions pertains.
Add Lender Share	Optional	Button	Brings up the *Share Adjustment* window so user may add a new lender position to the deal. Host Bank position may not be added.
Add Outside Assignment	Optional	Button	Allows user to create an Outside Assignment for the selected lender.
Lender Query	Optional	Button	Brings up *Lender Query* window for this deal.
Exit	Optional	Button	Exits Non-Agent Lender Adjustment after displaying Last Review Date Window mentioned under Last Review above.

Share Adjustment Window

Appears when user drills down on an existing Lender Share, or selects the **Add Lender Share** button and then specifies Lender Name

Attribute	Req/Opt	Size/Format	Rules
Lender Name	System Generated	Display	Lender Name is displayed in Title Bar.
Lender Deal Share	Required	System Amount Standard	Lender's Current position in the Deal. User may enter a new Lender Deal Amount and/or pro-rate Lender Deal Amount across all facilities in the deal.
CCY	System Generated	Display	Displays the currency of the deal.
Pro-Rate	Optional	Button	Pro-rates Lender Deal Amount across all Lender Facility Positions.
Lender Location	Required	List Box: Locations for this Lender	User must select one of the listed locations for this lender.
Facility Shares	System Generated	List Box: Facility Name	Displays Lender's share in each Facility in the Deal. Facility Name, Currency, Facility Share and Global Facility Amount for every Lender Facility Share in the deal are displayed. User may drill down to update a selected facility share and/or to select **Reaggregate Facilities**, which will re-calculate Lender Deal Amount as the sum of the underlying Lender Facility Shares. User cannot exit until Lender Deal Amount is equal to the sum of the underlying Lender Facility Shares.
Up Arrow	Optional	Button	Moves up the list of Lenders in the *Non-Host Lender Share Adjustment* window.
Down Arrow	Optional	Button	Moves down the list of Lenders in the *Non-Host Lender Share Adjustment* window.
OK	Optional	Button	Exits, saving changes
Cancel	Optional	Button	Exits, canceling changes

Non-Business Day Rules

Beginning with Release 6.0.08.08, the **Non-Business Day Rules** option in the Deal Notebook is available to the Loan IQ General Audience. This option allows you to set non-business day rules by Currency, which will default to the Facility and Outstanding Notebooks. These non-business day rules are used to determine scheduled activity dates for both the Facility Increase/Decrease schedule and Principal Only Repayment schedule, and are overrideable on both of these schedules.

The two system parameters listed below must be set up, as applicable, in order for this functionality to work. These system parameters determine whether or not the non-business day rules may be modified on the Facility Increase/Decrease Schedule and the Principal Only Repayment Schedule, respectively. They are overrideable by the Branch of the Deal.

AAFSD (Auto-Adjust Facility Increase/Decrease Schedule Dates)

If **AAFSD** = *N* (default) then no changes may be made to the non-business day rules on the Facility Increase/Decrease schedule. Additionally, the non-business day rule drop-down list will not be visible on the Facility Increase/Decrease schedule. The exception is where a schedule already has an existing rule (added when **AAFSD** = *Y*). The drop-down list is then visible with the option that rule may continue to be used or removed (current Loan IQ Pricing Rules apply).

If **AAFSD** = *Y* then changes may be made to the non-business day rules for the Facility Increase/Decrease schedule. Schedule Dates are automatically adjusted bassed on the non-business day rules that default from the Deal and are associated with a specific currency set up via **Options>Non-Business Day Rules in the Deal Notebook**..

AAPSD (Auto-Adjust Loan Principal Schedule Dates)

If **AAPSD** = *N* (default) then no changes may be made to the non-business day rules for the Principal Only Repayment schedules. Additionally, the non-business day rule drop-down list will not be visible on the Repayment schedule. The exception is where a schedule already has an existing rule (added when **AAPSD** = *Y*). The drop-down list is then visible with the option that rule may continue to be used or removed (current Loan IQ Pricing Rules apply).

If **AAPSD** = *Y* then changes may be made to the non-business day rules for the Principal Only Repayment schedules. Schedule Dates are automatically adjusted bassed on the non-business day rules that default from the Deal and are associated with a specific currency set up via **Options>Non-Business Day Rules in the Deal Notebook**.

Selecting the Non-Business Day Rules option opens the *Non-Business Day Rules for <Deal>* window, which allows you to set up the Non-Business Day rules, for each Currency, for the Facility Increase/Decrease Schedule, and the Principal Only Repayment schedule. Click the **Add** button to add a Non-Business Day Rule(s) for a Currency for the Facility Increase/Decrease Schedule in the *Facility Increase/Decrease Schedule Rules* section of the table. Upon selection, a Currency drop-down list is displayed, the selection of which defaults to "*" ("wildcard"). When the wildcard is selected, then Deal level Non-Business Day Rules will default to all Facilities and Outstandings. The wildcard default selection is modifiable. You may select a Currency and a corresponding Business Day Rule from the drop-down list in the Rule column. Currency must be unique for Rules. Select the **Remove** button to remove a rule from the table. The same functionality applies to the *Principal Only Repayment Schedule Rules* section of the table. Click **OK** to save your defined Rules.

Notes:

If both system parameters are set to *N*, the **Non-Business Day Rules** option will be disabled in the Deal Notebook.

If either one of the system parameters is set to N, while the other is set to Y, the Add and Remove buttons on the *Non-Business Day Rules for <Deal>* window, will be disabled and the Currency and Rule will not be able to be set.

If you attempt to deactivate either of the above system parameters after a Rule(s) has been defined on the Deal level <u>and the rule already exists in a schedule</u> [Note: Only deals are checked for existing rules before disabling the system parameter. Schedules are not checked, and rules on existing

schedules may still exist and can still be used until they are removed], then Loan IQ will not allow you to deactivate the parameter, and a message will be issued, listing the Deal Names in which the Schedule Rule(s) exist.

If you do not define a Currency Non-Business Day Rule, the Pricing Option Non-Business Day Rule applies at the Outstanding level.

Portfolio Positions

Option is available to users who are authorized (in **User Profile**) to perform the function, and who also have *View Price* authority for the relevant Risk Book(s). Lists all Portfolio Positions in the Deal. User may drill down to see more details regarding a particular portfolio position (including Historical P&L), or may elect to perform a Portfolio Transfer, Portfolio Adjustment, or History Adjustment for the selected position.

Note: Prior to deal close, unrealized P/L (for both on-line presentation and batch posting) is now dependent upon the **P/L prior to Deal Close** indicator in the System Parameter Table. Indicator is separately secured and defaults to *No* (do not recognize P/L prior to deal close).

Portfolio Allocations Window

Beginning with Release 6.0.08.08 (Patch) with the Delayed Compensation functionality, the **'No DC accruals for a Fac in NP status'** column in available. Each unit under this column is displayed with either 'N' (default) or 'Y' (override default value).

The default value of this new column as against each unit of "Branch/Portfolio/Expense /Facility" is 'N'.

This default value 'N', for a Facility portfolio confirms that existing functionality of calculating the Delayed Compensation regardless of the Facility performing status will be applicable.

> **Fac. Perf. Stat. Override** – button is active when user selects a 'Branch/Portfolio/Expense/Facility' row. When selected, the *Delayed Compensation based on Facility Performing Status Applicable* window is displayed. Each row will have a checkbox which can be checked or unchecked to determine calculating the Delayed Compensation based on Facility Performing Status.

For further details regarding Facility Portfolio Positions, please see separate document *Misys Loan IQ Portfolio Positions Edit & Validation Rules*.

Restore GL/Rearchive GL

Beginning with Release 6.0.08.05, the following separately secured functionality is available.

This option is available to users who are authorized (in User Profile) to perform the function. The option lists either **Restore GL** or **Rearchive GL** for selection.

Restore G/L option is available to restore G/L entries for archived terminated deals. This option is only available on terminated deals which have previously archived G/Ls, but not yet restored. The option changes to **Rearchive GL** after GL entries have been restored.

Rearchive G/L option allows users to rearchive restored G/L entries.

A Deal Event is created in the Deal Notebook after archiving G/L entries and after restoring archived G/L entries have been performed successfully.

Licensed clients should refer to the *Misys Loan IQ G/L Archiving for Terminated Deals Setup & User Guide* document for further information. If you are not a licensed client and would like further information about this functionality, please contact your Misys Loan IQ Account Manager.

Rename Deal

If the user wishes to change the Deal Name, the Deal Alias, the Deal Tracking Number, the Deal ANSI ID, and/or the Deal Alternate ID, the **Rename Deal** option must be selected. **A Deal Event is created as a record of the change(s) noting all the old and new values.** While all of the **Rename Deal** fields are **optional, at least one** must be entered in order to rename the deal. The **Rename** option is available to all deals in any status, including terminated deals.

Attribute	Req/Opt	Size/Format	Rules
New Deal Name	Optional	40 char	Must be unique within bank.
New Deal Alias	Optional	20 char	Must be unique within bank.
New Deal Tracking Number	Optional	12 char	Must be unique within bank. User entered tracking numbers may be alphanumeric (no symbols). Current Tracking # is displayed on MIS Codes tab.
New ANSI ID	Optional	9 Char	Must be unique within bank, and must be 9 characters exactly. Current ANSI ID # is displayed on MIS Codes tab.
New Alternate ID	Optional	10 Char	Must be unique within bank. Maximum of 10 characters. Current Alternate ID # is displayed on MIS Codes tab.

Send Notifications

Selection of this option presents the user with a pop-up dialog allowing the user to create and send a free-form message to any person who has an *Active* or *Notification Only* (beginning with Release 5.5 and forward) Loan IQ User Profile. Initially, the **Send to** list (Notification List) is populated from the list of Deal Personnel assigned to the deal. The user can de-select and select user to customize the Notification List before sending the message. The list of personnel assigned to the deal is not changed; only the Notification List is modified. The subject box is automatically filled in with the deal name, but may be modified.

Attribute	Req/Opt	Size/Format	Rules
Notification List	Optional	List Box	Displays Name, User ID, Job Function and E-mail ID of all users on this deal's Notification List.
Modify List	Optional	Button	Allows any person with an *Active* or *Notification Only* Loan IQ User Profile to be added to/removed from deal's Notification List.
Subject	Required	40 char	Defaults to deal name. Can be changed to any freeform text.
Message	Required	256 char	Text of the message. Freeform entry by user.
OK	Optional	Button	Sends composed message to all users who are members of this deal's Notification List.

Servicing Group Change

Deal Level Servicing Group Change is used **only** to change the Servicing Group assigned to a particular lender throughout the deal. For actual Position Changes, **user must still perform a Facility Level Servicing Group Change via the Create Adjustment Transaction option in Facility Lender Shares.** For example, if a lender has two different positions with two different Servicing Groups**, the Servicing Group Change option in the Deal Notebook cannot be used to combine the two positions.**

Facility level SG change must be chosen instead of the Deal level SG Change, if the new SG to be specified for the lender is already present in the deal.

Old Servicing Group will be updated with the new Servicing Group wherever it appears throughout the deal (on Facility shares, Outstanding shares, SBLC and BA issuing Bank Shares, Bid and Swingline Bank Shares, interest and fee payment shares, accruals, deal banks, participation agreements, commitment shares, etc.). **However,** the New Servicing Group selected **cannot be a Servicing Group that already has a position or a role in the Deal.**

All activity associated with the old Servicing Group, including accrued interest, is transferred to the new Servicing Group, so accrual share adjustments need not be performed to transfer the accrued interest.

Option is not available to Borrower, Agent or Facility Main Servicing Groups.

User is presented with a Transaction Notebook similar to the Servicing Group Change Notebook accessed via Create Adjustment Transaction option in Facility Lender Shares, with Old Servicing Group and New Servicing Group Buttons. Old Servicing Group Button brings up selection of all Lenders/SGs that have positions in the deal. Also, any Lender Servicing Groups with Bank Roles defined for Bid Bank, Swingline Bank, SBLC Issuing Bank and BA Issuing Bank will be included for selection, **whether or not they have shares in any actual outstandings**. New Servicing Group Button brings up a list of **all** Servicing Groups belonging to that Lender for all of that Lender's completed Lender Profiles in Loan IQ, **that do not already have positions in the deal.** Servicing Group Change transaction **cannot** be saved until both old and new Servicing Groups are chosen.

When a Servicing Group Change is released, it creates an event in the deal Notebook. The effective date of a Servicing Group change **defaults to the Deal Close Date** and all Cashflow Done Dates associated with the changed Servicing Group are unaffected. Preferred Remittance Instruction may be set or changed for the New Deal Servicing Group via the Preferred Remittance Instruction option on the Options Menu. The Change Servicing Group Notebook also has Workflow and Events Tabs.

Servicing Group Change is subject to the Approvals Matrix Framework. A Servicing Group Change must be approved and released according to the rules set up for the transaction in the Approvals Matrix. Show Approval Status option is available from the Status Menu, displaying the Rules set up in the Approvals Matrix.

Note: A **Choose Another SG** button is available to pick a servicing group that is **not** included in the pick list brought up by the **Old Servicing Group** button. User selects **Choose Another SG**, then selects a Lender, and then the **complete** list of Servicing Groups for that Lender (for all locations) appears. **Lender Servicing Groups with shares in Admin Fees and Admin Fee payments must be selected this way.**

Note: If the new Servicing Group is deleted from the Customer Notebook prior to the release of the Servicing Group Change, Servicing Group Change cannot be released until a new, valid Servicing Group is selected.

Note: When changing a Host Bank Servicing Group, clicking the **New Servicing Group** button will bring up a selection of **only** Servicing Groups belonging to the same **branch** of the Servicing Group to be changed.

Note: Manual transactions (Manual Funds Flow, etc.) are **excluded** from Deal Servicing Group changes.

Credit Agreement Description

The Credit Agreement Description option allows users to enter a complete summary of the Credit Agreement into Loan IQ. This information is then included in the confirmation letter(s). Selection of the Credit Agreement Description option opens the Credit Agreement Description window, which displays the Creator's Logon ID and the Subject. The user may enter the Credit Agreement Description in the Comment text box, which allows for approximately 3500 characters. Click OK to save the Credit Agreement Description and an Event will be created in the Events page of the Deal Notebook. The creation date will also be recorded. The ability to modify the Credit Agreement Description is also provided.

For further information on how to create a confirmation letter, please refer to the QRC's *LSTA&LMA Confirmation Letter* and *LSTA&LMA Confirmation Letter for Word XP*, located on the Client Center Support Site on the web.

Trade Ticket Entry

This is separately licensed functionality that facilitates and streamlines an efficient data capture of trades. Licensed clients should refer to the *Misys Loan IQ How to Prepare for and Use Trade Ticket Entry* and the *Misys Loan IQ Trade Ticket Entry Edit & Validation Rules* for further information. If you are not a licensed client and would like more information about the **Trade Ticket Entry** functionality, contact your Misys Loan IQ Account Manager.

Deal Comments and Generate Deal Summary Notice

This is separately licensed functionality. Licensed clients should refer to the *Misys Loan IQ Deal Summary Notice Setup & User Guide*. If you are not a licensed client and would like more information about **Deal Comments** and **Generate Deal Summary Notice** functionality, contact your Misys Loan IQ Account Manager. These menu options are described below.

Deal Comments

The Deal Comments menu option allows users to enter two optional comments for the Deal which are variables for the Deal Summary Notice Template. Users also have the ability to move the variables thereby moving the position of the comment.

Attribute	Req/Opt	Size/Format	Rules
Comment 1	Optional	3500 characters	Free form entry
Comment 2	Optional	3500 characters	Free form entry.
OK	Optional	Button	Sends comments to all users who are members of this deal's Notification List.

Generate Deal Summary Notice

The Generate Deal Summary Notice option provides closing/summary data relating to the Deal and Facility Pricing for Interest, Ongoing Fees, and Letter of Credit Fees on notices sent to all Notice Recipients Types (Lenders, Borrowers/Depositor, Guarantors, Exporters/Sponsors). Licensed clients should refer to the *Misys Loan IQ Deal Summary Notice Setup & User Guide* for further information.

For Lender Profile Types, in the Notices screen, two options have the ability to generate Notices:

Option 1: **Include Pending Assignments** - Notices are generated for all lenders (Primaries/Assignees and Participants) that have a nonzero Lender position, or potential position, at the times the notice is generated.

Option 2: **Exclude Pending Assignments** – this is the default. Notices are generated for all lenders (Primaries/Assignees, and Participants that have a nonzero Lender position as well as potential positions in any Pending Trades (Circle, Block Trade Allocations, Trade Entry tickets, and Deal level Lender Copy transactions both Buy and Sell must be included.

The Deal may be in any status. Any Deal Summary Notices that were previously generated can be viewed via Queries/Notices/Date Range.

Notes:

Users can generate Deal Summary Notices as many times as required.

Whenever the General Summary Notice is generated, the data at the time the notice is generated will be returned.

The Notice generated for a Lender displays data only for Facilities that the Lender has a nonzero position in. For example, if a Deal has three Facilities but Lender1 only has a position in Facility 3 then only the Facility 3 data will appear on the notice.

If a Deal is not closed, the pending positions that exist for the Primaries (Distribution and Organization) will be used for the Notice.

Credit Contacts

Allows the user to select the contacts that should receive notifications from Intralinks. In order for a contact to appear in the *Credit Contacts* window, the following must occur:

The Customer must have a position in the Deal.

The Customer Contact must have a Contact Purpose that is associated with a Bank Business Area of *Credit*.

The Customer Contact must have Notifications Methods of *Email* and *Intralinks*.

The *Credit Contacts* window is part of **Intralinks** functionality, which is separately licensed. Licensed clients please refer to the *LenderBridge Functional Setup and User Guide*, and the *Misys Loan IQ IntraLinks LenderBridge Technical Setup Guide*. All other interested clients please contact your Misys Loan IQ Account Manager for more information.

As per the separately licensed **Credit Contacts Screen Redesign for High Data Volumes** enhancement, available in Releases 5.4.07.08 (Patch), 6.0.08.02 (Patch), 5.5.08.05, and 6.0.08.05, the following functionality applies. The enhanced *Credit Contacts* window provides the ability to select credit contacts for inclusion in the Intralinks Credit Contacts list more efficiently.

Licensed clients, please refer to the *Misys Loan IQ Credit Contact Screen Redesign for High Data Volumes Setup & User Guide* document for further information. If you are not a licensed client and would like more information about this functionality, please contact your Misys Loan IQ Account Manager.

Credit Contact Window

Attribute	Req/Opt	Size/Format	Rules
Customers – System Generated. Provides a list of customer for all the Customers in the Deal selected. Note: Only **one** Customer can be selected at a time.			
Expand All	Optional	Button	Expands the list of Credit Contact Customers.
Collapse All	Optional	Button	Collapses the list of Credit Contact Customers.
Role/Name	System	Display	Displays the Roles/Names of all the Customers

	Generated		within the Deal.
Agent	Optional	Display	Displays all the Agents within the Deal.
Borrower	Required	Display	Displays all the Borrowers within the Deal.
Lender	Required	Display	Displays all the Lenders within the Deal.
Credit Contacts - System Generated. Provides a list of contact names for all Contacts that meet the Filters and Conditions selected. Drill down to view the Customer Contact details.			
Search By	System Generated	Display	Displays the Search By criteria. The Search By text field is free form and must be completed to perform a search.
Search	Optional	Button	Select to perform a search. For example, allows users to search for a specific contact by Last Name.
Name	Column	Display	Displays the Credit Contact's Name.
Include	Column	Indicator	Defines whether the Contact will or will not receive notifications from IntraLinks. Select the *Include* indicator for the contact to receive a notice. Unselect the *Include* indicator to prevent the contact from receiving a notice.
Phone #	Column	Display	Displays the Credit Contact's phone number.
Purpose	Column	Display	Displays the Credit Contact's purpose defined in the Customer Contact Notebook, against a Contact record.
Ok	Conditional	Button	Where changes are made, **OK** saves any Unsaved changes then returns user to the Deal Notebook.
Cancel	Conditional	Button	Where changes are made, **Cancel** returns the user to the Deal Notebook after prompting to Save any Unsaved changes. Where no changes are made **Cancel** returns the user to the Deal Notebook.
Select All	Optional	Button	Selects all of the displayed Credit Contacts to be included.
Deselect All	Optional	Button	De-selects all of the Credit Contacts previously selected so they are excluded.

Consolidated Approval

Available beginning with Release 6.0.10.05 and forward, the following separately licensed **Approval Screen** functionality applies.

Provides the ability for authorized users to view and approve single sets of items for the following:

Deal approval

Circle Settlement approval

Outstanding Loan Initial Drawdown approval

SBLC Guarantee Issuance Approval

The Consolidated Approval option opens the Consolidated Approval screen.

Licensed clients should refer to the *Misys Loan IQ Online Help Approval Screen* for further information. If you are not a licensed client and would like further information about this functionality, please contact your Misys Loan IQ Account Manager.

Consolidated Approval Screen

The Consolidated Approval Screen is displayed in the existing navigator format. The items displayed are populated based on the existing data in Loan IQ. The screen displays the same information regardless of whether it is opened from the deal, initial drawdown, SBLC issuance, or circle. The screen contains a Notebook button that opens the Notebook in update mode and an Approver Details button that opens the Approver Details screen. A row of Loan IQ navigator buttons allows users to Print the Details screen, Go Back, Refresh the screen, Go Forward, and View History.

A Deal name hyperlink opens the Deal information screen displaying:

Name

Primary Borrower

Expense Code

Agreement Date

OK to fund

Admin Agent

Status

Classification

Closed Date

Deal Cusip/ISIN

Deal Pricing Options – (# Items)

The Deal section displays summary information and displays default items that are currently displayed for a deal. The rate related information is displayed for all the pricing options defined for the Deal.

Deal Pricing Options	Rate Setting, days in advance	Rounding decimal precision	Initial fraction rate	Initial fraction rate round

Note: All the deal information and approval details continue to display even after the deal closes.

Facility Pricing Options – (# Items)

The Facility section displays all the facilities under the deal, sorted by facility type and within each facility type, alphabetically by name.

FCN	Facility Name	Pricing Option	Spread	Final Float Begin Date

Note: Drilling into a row displays all the additional information related to the Facility in a separate screen:

Commitment

Aggregate Outstandings

Available to draw

Effective Date

Expiry Date

Note: All the facility information continues to display after the deal closes.

Outstandings - (# Items)

The Outstanding section displays all the initial drawdowns and SBLC issuances under the deal that are awaiting approval or have been approved, sorted alphabetically by outstanding type and within each outstanding type alphabetically by pricing option and within each pricing option, alphabetically by alias.

Outstanding Type	Alias	Global Original Amount	All in Rate	Effective Date	Maturity Date

Note: Drilling into a row displays all the approval information related to the Outstanding in a separate screen:

Periodic Rate Increase Cap on Arm Plan loan.

Lifetime Rate Decrease Floor.

Periodic Rate Decrease Floor.

Final Float Information

Reamortization frequency on loan Arm plan

Repricing Frequency on loan

Next P&I adjustment (reamortization date in the ARM plan)

Notes:

Once an initial drawdown has been released, its information is not displayed on the screen, but its approval details are still displayed.

Once an SBLC Issuance has been released, its information is not displayed on the screen, but its approval details are still displayed.

Circles - (# Items)

The circle section displays all the circle buys under the deal that are awaiting settlement approval or have been settlement approved, sorted alphabetically by Transaction type and within each transaction type alphabetically by lender share type and within each lender share type, in alphabetical order of circle RID.

Drilling into a row displays all the settlement approval information related to the Circle in a separate screen:

Settlement Approval Information:

Payment Method.

Description.

Name.

Type.

Beneficiary Account.

Relevant Label (ABA#, Account#)

Depending on the RI, Loan IQ populates the relevant label (ABA#, Account # etc)

Fed – ABA #

IMT – Account #

DDA – DDA #

Book Transfer – Book Account #

Servicer Number if different Customer ID of Admin Agent on Deal. (This is always the customer ID of seller.)

Buy-Up or Buy-Down Discount on Trade. (This is the amount of discount on drilling into the facility from the circle notebook.) or

One Time Post Trade Date Fee Payment on Trade. (This is displayed by going into event fees on the circle notebook.)Display both - one is N/A.

Interest. (calculated) This is the value of Decision from the interest on the funding decision screen for all the loans.

Once a Circle Buy has closed, its information is not displayed on the screen, but its approval details are still displayed.

Approver Details Screen

The Approver Details button on the Consolidated Approval screen opens the Approver Details screen. Two sections, All Transactions and Transactions awaiting approval based on user profile are displayed.

The Approver Details screen is displayed in the existing navigator format. The screen contains a Refresh button that collapses open items and refreshes the information, and Expand All, Collapse All buttons that expands or collapses items on the screen. Approve, Select All, and Unselect All buttons allow users to select all displayed items, unselect them, or Approve all selected items.

Available in a general release TBD and patched to Release 6.0.10.05, the following separately licensed Approval Screen additional functionality applies:

Print functionality is provided to print details with the date/time stamp for audit trail and details of approved users of deals, circles, initial drawdowns, and SBLC's.

When a deal is approved then identifiers/statuses of the deal with associated facilities are displayed with approver details.

The Date column displays the time stamp of approval transactions in addition to approved date information.

All Transactions

Depending on the approval matrix set up for the transactions and the security, Loan IQ displays the following:

Entity (Deal/Facility/Circle/Outstanding).

Transactions awaiting approval/settlement approval and transactions approved/settlement approved.

Transaction identifier (Deal Alias/Initial Drawdown Alias/SBLC Issuance Alias/Circle RID).

Approved By:

Approval Date

Items are displayed in the following order:

- Deal
- Loans
- SBLCs
- Circles

Note: Loans, SBLCs, and Circles are displayed as a collapsible list sorted by Alias.

For deals the deal alias is displayed in the first column and the deal RID in identifier.

For outstandings, the alias is displayed in the first column and, under identifier, the RID of the drawdown/issuance is displayed.

For circles, in the first column, the seller name is displayed and under identifier the circle RID.

If any of the underlying transactions require multiple approvals, each approver is presented the same consolidated screen and is able to see the earlier approvers.

Example:

If Deal A, Initial Drawdown B and Trade C are being approved assume that Deal A needs 2 approvers.

When Approver 1 goes to the deal and selects to approve, Approver 1's details and time stamp appear on the consolidated screen.

When Approver 2 goes to the deal to approve, Approver 1's details and time are visible on the consolidated screen. Once Approver 2 approves, his/her details and time stamp should also be visible on the screen.

For a transaction awaiting approval/awaiting settlement approval, the display is a line for each approver along with the status of the approval. From this list, only those items requiring a specific user's approval display in the Transactions awaiting specific user approval when that user accesses the screen.

Loan IQ provides search functionality from this screen. Users can select the search entity from a drop-down list which contains the following values: Circle, Facility, Loan, SBLC. On selecting any of the entities, the system provides a Search By drop-down list to select an identifier for searching as follows:

For Circle: Alias, RID

For Facility: Facility Name, RID

For Loan: Alias, RID

For SBLC: Alias, RID

Note: If the approval is performed in the Approval Screen, approval details (user/date and time stamp) are displayed on the approval screen's “all other transactions" section and also in the appropriate notebook’s events.

Transactions awaiting approval based on user profile

Once a user who is also an approver accesses the Approval Details screen, from the list of all transactions awaiting approval/settlement approval/approved, Loan IQ filters and displays identifying details of only those transactions awaiting approval/awaiting settlement approval (as applicable based on security profiles) for the user.

The entities are displayed in the following order:

- Deal
- Loans
- SBLCs
- Circles

Note: Loans, SBLCs, and Circles are displayed as a collapsible list sorted by Alias. For deals and outstandings the alias is displayed. For circles the seller and the circle RID are displayed.

Loan IQ provides ability to users to select the transactions to approve. The default is all transactions. An Approve button is provided to approve the transactions. As each approver reviews the data and does the approval, their details and date/time stamp is populated in the “All Transactions” section.

Example:

If there are 3 approvers for a transaction, once approver 1 gives approval, their details are populated for subsequent approvers to view.

Approve Transactions

Loan IQ provides the ability to approve all the circles/initial drawdowns/SBLC Issuances under a Deal from the Consolidated Approval screen provided users have the required security and authority. The Initial Drawdowns/SBLC Issuances are those that are Awaiting Approval only or in case of circles (Buys), those that are awaiting settlement approval.

Consolidated approval functionality also applies to closed deals in approving new loans/SBLC's/Circles.

Once all the underlying transactions have been approved from the consolidated screen from all approver(s), the screen still displays information. The displayed information is the same as the current information in Loan IQ.

Warnings that currently display on the individual transactions when they are approved display on the Approval screen.

After an approval of a Deal/Circle/Initial Drawdown/SBLC Issuance, if its status is changed to Awaiting Approval, on the approval screen, previous approvers from the initial approval are not displayed.

If the status is changed to anything other than awaiting approval/awaiting settlement approval for circles, the transaction is not displayed on the screen.

If a deal and loan have been approved and then the loan’s status is changed to Awaiting Approval, there is a warning on the Approval screen.

If the deal is still pending and not yet awaiting approval (or not yet fully approved), this screen is still available from an outstanding or circle that is currently awaiting approval. However users are not able to approve the outstanding until the Deal is approved.

Approvals done from the Consolidated Approvals screen write events to the deal/circle/initial drawdown/SBLC Issuance event tab. Loan IQ displays in the comments section “Approval completed using the consolidated approval screen.”

When a deal, initial drawdown, SBLC Issuance or circle has been fully approved, the details shown on the consolidated approval screen at the time of final approval (including all the Approver details) are saved in a text format associated with the final approval event. Users can access and view this text from the Events page of the respective Deal/Initial Drawdown/SBLC Issuance/Circle, by drilling into the event.

Users have the ability to print and export the data on the consolidated screen. All the information in all pages on the screen is printed or exported.

During approval using the consolidated approval screen, if there is an error preventing any single transaction approval, then none of the selected transactions can be approved.

There is no change to existing approval functionality. It is possible to use the Workflow tab and approve transactions without accessing the consolidated screen.

Alerts

Available beginning with Release 6.0.09.11 and forward, the following separately licensed **User Defined Alerts & Lockouts** functionality applies.

Allows users to create, modify, and delete User Defined Alerts.

Note: Alert functionality is not applicable for Current Accounts and Standalone Outstandings Standalone Loan, Standalone Deposits, and Standalone Current Account.

Licensed clients should refer to the *Misys Loan IQ User Defined Alerts and Lockouts Setup & User Guide* document for further documentation. If you are not a licensed client and would like further information about this functionality, please contact your Misys Loan IQ Account Manager.

Alert Management Screen

This screen displays all of the User Defined Alerts for the Deal Notebook. When an alert has been defined, all parent nodes till the customer are displayed even if they have no alerts defined.

Users can create a new alert or edit and delete existing alerts.

Attribute	Req/Opt	Size/Format	Rules
Customer/Deal/Facility/ Outstanding		Dropdown list	Lists Customer, Deal, Facility, and Outstanding notebook choices.
Refresh	Optional	Button	Refreshes the current view with updated information.
Expand All	Optional	Button	Displays the expanded view completely.
Collapse All	Optional	Button	Displays the collapsed view completely.
Customer/Deal/Facility/ Outstanding	System generated	Display	Displays in alphabetical order all Customers, Deals, Facilities, and Outstandings for whom alerts have been defined.
Alerts	System generated	Display	Displays short descriptions of all alerts specifically defined for that Customer, Deal, Facility, and Outstanding.
Create	Optional	Button	Opens the *Alert Editor* screen used to create an alert. See the details in the **Alert Editor Screen** section below.
Modify	Optional	Button	Allows users to modify existing alerts.
Delete	Optional	Button	Deletes the highlighted alert item.
Details	System generated	Display	Displays details of selected alerts.
Exit	Optional	Button	Exits the Alert Management Screen.

After selecting the **Create** button, the *Alert Editor* screen is displayed.

Alert Editor Screen

Users can enter the User Defined Alert details.

Attribute	Req/Opt	Size/Format	Rules
Short Description	Required	256 char	Short description of the alert.
Details	Required	1024 char	Details of the alert that flow down from input entered during Create/Edit. Displayed when the Short Description is highlighted in the Alert Management Screen.
OK	Optional	Button	Saves the alert details. The saved alert item is listed under the Alert Management Screen.
Cancel	Optional	Button	Cancels the alert details.

Lockouts

Available beginning with Release 6.0.09.11 and forward, the following separately licensed **User Defined Alerts & Lockouts** functionality applies.

Allows users to create, modify, and delete User Defined Lockouts.

Licensed clients should refer to the *Misys Loan IQ User Defined Alerts and Lockouts Setup & User Guide* document for further documentation. If you are not a licensed client and would like further information about this functionality, please contact your Misys Loan IQ Account Manager.

Lockout Management Screen

Displays all the User Defined Lockouts for the Deal Notebook.

Note: Lockout functionality is not applicable for Escrow Deposits, Current Accounts, and Standalone Outstandings Standalone Loan, Standalone Deposits, and Standalone Current Account.

Users can create a new lockout or edit and delete existing lockouts.

Attribute	Req/Opt	Size/Format	Rules
Customer/Deal/Facility/ Outstanding	Optional	Dropdown list	Lists Customer, Deal, Facility, and Outstanding notebook selections.
Text box	Optional	Search text	Search text Loan IQ uses to filter the elements in the tree structure and display those Deals with lockouts that match the input text.
Refresh	Optional	Button	Refreshes the current view with updated information.
Expand All	Optional	Button	Displays the expanded view completely.
Collapse All	Optional	Button	Displays the collapsed view completely.
Customer/Deal/Facility/ Outstanding	System generated	Display	Displays in alphabetical order all Customers, Deals, Facilities, and Outstandings for whom lockouts have been defined.
Short Description	System generated	Display	Displays short descriptions of all lockouts specifically defined for that Customer, Deal, Facility, and Outstanding.
Details	System generated	Display	Displays details of all lockouts specifically defined for that Customer, Deal, Facility, and Outstanding.
Transactions Not Allowed	Required	Indicator (radio button)	Displays transactions that can be disabled by radio button selection.
Create	Optional	Button	Opens the *Lockout Editor* screen used to create a lockout. See the details in the **Lockout Editor Screen** section below.
Modify	Optional	Button	Allows users to modify existing alerts.
Delete	Optional	Button	Deletes the highlighted alert item.
Exit	Optional	Button	Exits the Lockout Management Screen.

After selecting the **Create** button, the *Lockout Editor* screen is displayed.

Lockout Editor Screen

Users can enter the User Defined Lockout details.

Attribute	Req/Opt	Size/Format	Rules
Short Description	Required	256 char	Short description of the lockout.

Details	Required	1024 char	Details of the lockout that flow down from input entered during Create/Edit. Displayed when the Short Description is double clicked in the Lockout Management Screen.
OK	Optional	Button	Saves the lockout details. The saved lockout item is listed under the Lockout Management Screen.
Cancel	Optional	Button	Cancels the lockout details.

Messaging Change Transaction

Beginning with Release 6.0.08.08 (Patch), the following separately licensed Markit Clear Inventory Messages functionality applies:

The option **Messaging Change Transaction** is available only when the following conditions are all met:

Enhancement license is turned on

Send Positions menu - Last Sent field is populated

When the Deal Last Send field is populated, Messaging Change Transaction is required for modifying fields on the Deal Messaging tab.

When the Messaging Change Transaction is selected a *Messaging Change Transaction Notebook* is opened if no pending messaging change transaction exists in the deal.

If a pending Messaging Change Transaction exists in the deal, Loan IQ will open the existing pending messaging change transaction.

Users will be able to update any field that is on the Messaging tab directly on the deal notebook if any of above conditions is not met.

All fields on the Messaging tab are available for update through the Messaging Change Transaction. The change takes effect upon the deal messaging change transaction release.

A Change tab, is available in the messaging change transaction.

The approvals matrix looks at the branch of the Deal when determining which Approvals Matrix rule is in effect for that transaction.

A **Messaging Change Transaction Released** event is recorded on the Deal Events tab after the messaging change transaction is released.

Restructure

This is separately licensed functionality. The Deal Restructure functionality allows users to restructure an existing loan into a new pending deal moving lenders and their positions from the old ("Source") deal into a new ("Target") deal.

Licensed clients, please refer to the *Misys Loan IQ Deal Restructure - Setup & User Guide* for further information. If you are not a licensed client and would like more information about the Deal Restructure functionality, contact your Misys Loan IQ Account Manager.

This option allows users to select the "Source" deal for Deal Restructure.

Restructure option is available only to "Pending" deals. The *Deal Select* window opens and users call up an existing closed deal after selecting the **Restructure** action.

The Pending Deal Restructure appears in the pending pages of both the "Source" and "Target" deals.

Notes:

It will be the responsibility of the user to terminate the old closed deal before close of business on the day of the restructure.

The Effective Date of the deal restructure and the Deal Close Date must be the same.

Deal Restructure Transaction Notebook

This is separately licensed functionality. Licensed clients, please refer to the *Misys Loan IQ Deal Restructure with Netting of Cashflows Setup & User Guide* for further information. If you are not a licensed client and would like more information about the Deal Restructure functionality, contact your Misys Loan IQ Account Manager.

The Deal Restructure Transaction is used when an entire deal is to be restructured to a new deal and subsequently terminated.

General Tab

Attribute	Req/Opt	Size/Format	Rules
Effective Date	Required	Date	The Effective Date of the restructure and the Deal Close Date must be the same. The Effective Date will be the default Effective Date for all facilities, provided that a date has not already been entered for the Facility Effective Date. If the deal has a projected close date, the deal restructure Effective Date defaults to the deal projected close date.
Source Deal	Required	Button	Defaults to the Source Deal selected. Opens the source deal notebook.
Source Facilities/Paydowns – Displays a lists the Source Facilities and each Facilities' Outstandings. It also lists each Outstandings' Paydowns. The Description , Currency, Default Amount, Transaction Amount, and Status of each is also displayed.			
Set to Restructure	Optional	Button	Restructures entire facility with loans, principals, and fees, if applicable.
Add Paydowns	Optional	Button	Opens the *New Paydowns* window to add paydowns.
Delete	Optional	Button	Delete the selected item (Facility, Outstanding, Paydown).
Modify Amount	Optional	Button	Modify the amount of the selected paydown.
Open Selected Item	Optional	Button	Opens the selected item notebook.

Drawdowns Tab

Attribute	Req/Opt	Size/Format	Rules
New Target Outstandings – Displays a list of the Facility, Description, CCY, Requested Amount, and Status of the New Target Outstandings. Drilling down on an Outstanding item, opens the Loan Drawdown Notebook.			
Add	Optional	Button	Allows users to create outstandings for the new facilities in the target deal. Opens the *Outstanding Select* window to select a New Target Outstanding.
Delete	Optional	Button	Deletes the New Target Outstanding selected.
Cancel	Optional	Button	Cancel the transaction.

Regenerate All Shares	Optional	Button	Regenerates all the shares in the New Target Outstanding list.

Upfront Fees Tab

Attribute	Req/Opt	Size/Format	Rules
Upfront Fee Payments – Displays a list of the Upfront Fee Payments added to the Restructure transaction. Drilling down on an Upfront Fee Payment item, opens the Upfront Fee Payment Notebook.			
Add	Optional	Button	Opens the *Pending Upfront Fee Payment from Borrower/Agent/Third Party* Notebook.
Delete	Optional		Deletes the Upfront Fee Payment selected.
Upfront Fee Distributions – Displays a list of the Upfront Fee Distributions added to the Restructure transaction. Drilling down on an Upfront Fee Distribution item, opens the Upfront Fee Distribution to Primaries Notebook.			
Add	Optional	Button	Opens the *Pending Upfront Fee Distribution to Primaries* Notebook.
Delete	Optional	Button	Deletes the Upfront Fee Distribution selected.

There are **Events** and **Workflow** tabs as well. The Events tab lists all major events in the life of the Deal Restructure, such as creation, approval, and release. Two deal events are written - an *Initial Creation* deal event for the new deal, which will note the "Restructured From" information and a *Restructured To* deal event for the old deal, which will note the "New deal name".

The Workflow tab shows major tasks that need to be completed (*Create Cashflows*, *Approve*, *Release*, *Generate Intent Notices*).

Deal Restructure Notebook - File Menu

The following options are available from the Deal Restructure File Menu:

Save

Delete

Exit

Save

Saves the Deal Restructure Notebook.

Delete

Deletes Pending Deal Restructure only.

Note: A Deal cannot be deleted if a Guarantor exists, if Cashflow already exists, or if Pending General Ledger entries exist.

Exit

Exit the Deal Restructure Notebook.

Deal Restructure Notebook – Options Menu

The following options are available from the Deal Restructure Options Menu:

Inquiry/Update

Cashflows

Change Effective Date

Copy Fee Pricing

Copy Interest Pricing

Create Primary Assignment

Generate Notices

Lender Copy Transaction

Validate for Release

View Primary Assignment

Deal Notebook

Update

Changes the status of the Deal Restructure Transaction Notebook. If the Notebook is in *Inquiry* mode then Update will be available for selection.

Cashflows

Opens the Cashflows Window. Create, display or modify Cashflows for the Restructured Deal.

Change Effective Date

Permits the Effective Date of the pending Deal Restructure to be changed **prior to its release.** The Effective Date of the Deal restructure defaults to the Effective Date of all facilities, provided that a date has not already been entered for the Facility Effective Date.

Copy Fee Pricing

Copies the Fee Pricing that has been set up in the Source Deal/Facility.

Copy Interest Pricing

Copies the Interest Pricing that has been set up in the Source Deal/Facility.

Create Primary Assignment

Allows users to add pending assignment primaries with a future expected close date that will be closed on that specified date after the deal has closed.

Generate Notices

Option is available to **pending loans**.

When selected, the request to "Generate Intent Notices" is valid as long as **Notice Recipients exist.**

The Intent Notices, if requested, are produced for the Restructure Deal as a whole, and note all of its component parts.

Lender Copy Transaction

Opens the Deal Select window so users can select the Deal to copy lender shares from the Source Deal.

Validate for Release

System validates workflows for Release of the Deal Restructure Transaction.

View Primary Assignment

Displays primary assignment, if applicable.

Deal Notebook

Opens the Deal Notebook.

Deal Restructure Notebook – Status Menu

The following options are available from the Deal Restructure Status Menu:

Approve

Cancel

Release

Return to Awaiting Send to Approval

Send to Approval

Approve

The Deal Restructure must be approved before it can be released, and the individual component parts cannot be approved separately. All of the validations that must be passed in order to release the Deal Restructure must also be passed in order to approve it.

Cancel

Cancels a Deal Restructure. See rules for 'Cancel' option under Outstanding Status Options.

Release

The Deal Restructure must be released by selecting the "Release" option in the Deal Restructure Notebook. **The individual component parts cannot be released separately.** Releasing the Deal Restructure creates an event in the source and target deal, and releases all of the underlying component parts.

Note: New loan can only be created in the **same currency** as the "Source Loan."

If the Target Deal has not yet been approved, the release of the deal restructure will approve and close the deal.

Return to Awaiting Send to Approval

Returns a Deal Restructure that is 'Awaiting Release' back to 'Awaiting Approval' status.

Send to Approval

Available only to pending transactions that have had cashflows created. If only one approver is required and the user's job function code qualifies, according rules set On-Line Approvals Matrix, "Send to Approval" will approve the transaction and move it to a status of "Awaiting Release"

Toggle SLM Eligible Indicator

Available beginning with Release 6.0.08.08 (Patch) and Release 6.0.09.11 and forward, the following separately licensed SLM Interface functionality applies.

This option allows users to toggle on/off SLM Eligible indicator for the Deal, when the user has *Update* access to the **Deal SLM Eligible Indicator(s)** application function.

An Event is created when the setting of the indicator is manually changed.

Licensed clients should refer to the *Misys Loan IQ Online Changes for SLM Interface Setup & User Guide* document for further documentation. If you are not a licensed client and would like further information about this functionality, please contact your Misys Loan IQ Account Manager.

Reminders

Beginning with Release 6.0.09.11 as per separately licensed enhancement, *User Defined Reminders,* a User Defined Workflows section is also available from the Workflow Tab. Clients with the User Defined Reminders license can create, modify and delete User Defined Reminders and complete the associated User Defined Workflow items in the Workflow tab.

Please refer to the *Misys Loan IQ User Defined Workflows/Reminders Setup & User Guide* for more information. If you are not a licensed client and would like further information about this functionality, please contact your Misys Loan IQ Account Manager.

Reminder Management Screen

Displays all the User Defined Reminders for the Deal Notebook.

Users can create a new reminder or edit and delete existing reminders.

Attribute	Req/Opt	Size/Format	Rules
Sort By			
Target Date	Optional	Indicator (radio button)	Default. If selected, reminders are displayed based on Target Date.
Short Description	Optional	Indicator (radio button)	If selected, reminders are displayed based on Short Description.
Expand All	Optional	Button	Displays the expanded view completely.
Collapse All	Optional	Button	Displays the collapsed view completely.
Create	Optional	Button	Opens the *Create Reminders Screen* used to create a reminder. See the details in the **Create Reminders Screen** section below.
Edit	Optional	Button	Allows users to edit existing reminders.
Delete	Optional	Button	Deletes the highlighted reminder item. **Notes:** Once a Reminder is selected and user clicks Delete, Loan IQ can Delete the reminder including the reminder which has appeared in the Workflow tab. If a Reminder has a schedule, Loan IQ can either delete all the reminders at once or delete a specific reminder item including the reminder which has appeared in the Workflow tab.
Exit	Optional	Button	Exits the Reminder Management Screen.

After selecting the **Create** button, the *Create Reminders* screen is displayed.

Create Reminders Screen

Users can enter the User Defined Reminder details.

Attribute	Req/Opt	Size/Format	Rules
Short Description	Required	256 char	Short description of the reminder.

			Displayed as a User Defined Workflow.
Details	Required	1024 char	Details of the reminder. When a short description of reminder is highlighted and the Details button is clicked in the workflow tab, the details are displayed in the Workflow tab. Double clicking a reminder completes it.
Recurring Reminder	Optional	Indicator (checkbox)	Allows users to enter a reminder with a schedule. **Note: Start Date**, **End Date** and **Frequency** fields are required when indicated is set to *Y* (checked).
Target Date	Conditional	Date	Defines the date on which the first instance of the reminder has to be effective. The date the reminder must appear. Disabled when Recurring Reminder is selected.
Lead Days	Conditional	Numeric	Defaults to zero. Can be modified. The number of calendar days in advance that the reminder must appear.
Start Date	Conditional	Date	Date cannot be prior to Current date. Defines the date that a recurring reminder must first appear.
End Date	Conditional	Date	Date cannot be prior to Start Date. Defines the last date through which a recurring reminder must appear.
Frequency		Dropdown list	Frequency of the recurring reminder.
OK	Optional	Button	Saves the reminder details. The saved reminder item is listed under the Reminder Management Screen.
Cancel	Optional	Button	Cancels the reminder details.

Edit Reminder Screen

User can edit an existing User Defined Reminder.

Attribute	Req/Opt	Size/Format	Rules
Short Description	Required	256 char	Short description of the reminder.
Details	Required	1024 char	Text of the reminder.
OK	Optional	Button	Saves the reminder detail edit. The modified reminder item is listed under the Reminder Management Screen.
Cancel	Optional	Button	Cancels the reminder edits.

VAT Treatment

Available in Release 7.4.1.2

The existing VAT Calculation by Lender functionality is enhanced. When the license file *VAT Calculation by Lender* is enabled then the following validations are applicable.

VAT Treatment by Lender for Deal

The VAT Treatment by Lender for Deal window (Deal > Options > VAT treatment) displays the following attributes in the same order:

Lender Servicing Group: Displays all the primaries with non-zero lender shares along with associated servicing group/groups of the deal.

Borrower/Payer: Any active customer across any customer profile (lender /borrower /guarantor /beneficiary) can be selected.

Fee Type: Defined in Fee Type code table, defaults to "All Fees". This implies that for a given lender & borrower / payer combination, the maintained VAT category and VAT rate is applicable for all fee types.

VAT Applicable: Select from the Radio buttons (Y/N). When VAT Applicable is "N" then

the **VAT Category** and **VAT Rate** records are greyed out and not editable.

VAT Category: Defined in VAT Category code table. There are four VAT categories – *Standard VAT*, *Non Standard VAT*, *VAT Exempt* and *Zero VAT*

VAT Rate: the value for VAT Rate depending upon the VAT category selected by the user.

- When the user selects VAT category as *Standard.*
  - The applicable VAT Rate from the country table for the selected lender defaults.
  - If the VAT Rate in the Country table is modified, the new VAT Rate is reflected here and will be used for further VAT calculations. In this case, the VAT Rate field is not editable.
- When the user selects VAT category as *Non-Standard*,
  - The VAT Rate defaults to zero, and is editable.
- When the user selects VAT category as *Zero VAT*,
  - The VAT Rate defaults to zero, and is not editable.
- When the VAT category is *VAT Exempt*,
  - The VAT Rate is zero, and will not be editable.

Attribute	Req/Opt	Size/Format	Rules
OK	Optional	Button	Saves the VAT details entered by the user.
Cancel	Optional	Button	Cancels the insertion of new VAT details.
Insert	Optional	Button	Inserts the VAT details entered by the user. It makes the various fields updatable in *VAT Treatment by Lender for Deal* window updateable to allow the user to enter new VAT details or change the existing VAT details. Fee type defaults to "All Fees".
Delete	Optional	Button	Deletes the VAT details entered by the user. User can also delete multiple records at once with this feature.

Note: User can create a new record by selecting the required lender/payer and Fee Type combination. If the specific combination already exists, error is displayed. If a particular fee type is not added in the VAT treatment table and the user tries to release this fee during payment, the system generates a hard error mandating the user to make an entry in the VAT treatment table.

For more details on defining VAT treatment at the deal level, refer *Misys Fusion Loan IQ Online Help > Deal > Defining VAT treatment at Deal Level* section.

Available in Release 7.4.1.0

The separately licensed *VAT by Lender* functionality of Loan IQ allows users to define VAT at the deal level through the new Option menu *VAT Treatment*. A user can define VAT treatment either while creating a new deal or an existing deal. Once the VAT treatment is defined at the deal level, the information flows down to the Facility/Outstanding Fee level.

When a user clicks VAT Treatment menu item in the Options menu of the deal notebook, the *VAT Treatment by lender for Deal* window is displayed.

VAT Treatment by Lender for Deal Window

The VAT Treatment by Lender for Deal window displays the following details required to define VAT treatment at the deal level:

Lender Servicing Group: Defined in the Primaries of the deal.

Fee Type: Defined in Fee Type code table.

VAT Applicable: Select from the Radio buttons (Y/N) in the *VAT Treatment by Lender for Deal* window.

VAT Category: Defined in VAT Category code table. There are three VAT categories – *Standard VAT*, *VAT Exempt* and *Zero VAT*. The value of *Standard VAT* category is defined in the Country code table (for Host Banks only). The other VAT categories – *VAT Exempt* and *Zero VAT* are hard-coded in Loan IQ.

VAT Rate: the value for VAT Rate depending upon the VAT category selected by the user.

Borrower: Defined in the deal.

Attribute	Req/Opt	Size/Format	Rules
OK	Optional	Button	Saves the VAT details entered by the user.
Cancel	Optional	Button	Cancels the insertion of new VAT details.
Insert	Optional	Button	Inserts the VAT details entered by the user. It makes the various fields updatable in *VAT Treatment by Lender for Deal* window updateable to allow the user to enter new VAT details or change the existing VAT details.

After the VAT is defined at the deal level, a user can apply VAT on the fees at deal, facility and outstanding levels. The Upfront fee and the Admin fee payments display the VAT treatment, where the *Total Amount Inc. VAT = Requested Amount + VAT Amount.*

For more details on defining VAT treatment at the deal level, refer *Misys Fusion Loan IQ Online Help > Deal > Defining VAT treatment at Deal Level* section.

View Unpaid Amounts

Available in TBD Release 7.1 (Patch), the following separately licensed Cashflow Reconciliation functionality applies:

This menu item is displayed in active mode only when the transaction is released and remains available anytime irrespective of the unpaid amounts settled / not settled. This is to enable all past released transactions by users and lists all the child transactions of Unpaid amounts.

Deal – Status Menu

Most options in Deal Status menu create events carrying both an actual Create Date and an Effective Date. The Create Date, and in most cases, the Effective Date of an event may not be changed. (The Deal Options on which the Effective Date may be changed subject to appropriate validation (by double-clicking on the selected event and entering a new effective date) are highlighted in the following list.

The following options are available in the Deal Status menu:

Send to Approval

Approve Deal

Close Deal

Terminate

Deal Died

Return to Pending

Revive Dead Deal

Restructure

Verify

Show Approval Status

Send to Approval

In order to be sent to approval, the deal must pass the following tests:

Deal status must be *Pending* and **all borrowers** selected for the deal must be marked as *Complete*. Presence of a Servicing Group is not required for borrower to be considered completed.

The following fields are **required** in order to send the deal to approval:

Deal Expense Code

Department

Department Subtype (This is a separately licensed functionality)

Agent (Customer, Location and Servicing Group) must all be present and location must be complete.

The Global Deal Proposed Commitment Amount must equal the aggregate of the proposed Commitments amounts in all of the associated facilities, and the sum must be greater than zero, in order to close deal. If facilities are denominated in currencies other than the deal currency, the Proposed Deal Commitment is set equal to the Facility Commitments converted to the Deal Currency using the FX rate(s) entered at the facility level on the Restrictions Tab. User has the option to accept the deal commitment or override the amount.

Every facility in the deal must have a **non-zero closing commitment amount**, a **Primary Borrower,** a **Processing Area** and a **Facility Control Number (FCN)** that is different from the system-assigned default value. Also, the Facility Agreement, Expiry, and/or Maturity Dates, if required by the specific facility type, must be present at *Send to Approval*.

If not Sole Lender Deal, a warning will be issued if the aggregate lender shares of all primaries (origination and distribution) does not equal the aggregate deal and facility amounts, but the deal will be able to be sent to approval in this condition.

If Sole Lender Deal: Only **one contractual** Circle can exist and it must be a Host Bank Origination Primary, must be a Host Bank Agent and the primary amount must be the deal amount. If more than

one circle exists, or the single circle is not a Host Bank Origination Primary, or the Agent is not a Host Bank, or the single primary's amounts do not equal the Facility and Deal amounts, then deal cannot be sent to approval (or verified).

Error messages will be issued as applicable. If no error conditions exist, the user will be given the opportunity to cancel the request to send the deal to approval, or to proceed. If the user elects to proceed with the approval, the following occurs:

Deal status is update from *Pending* to *Awaiting Approval*.

Deal Closing Commitment is set to Deal Proposed Commitment, if one exists.

Deal Event is created to record the fact that the deal has been sent for approval.

If Deal is a **Sole Lender Deal,** and **no circles exist**, sending the deal to approval automatically **creates** and **circles** the pending Origination Primary. All circle information except for Risk Book and Portfolio Allocations are defaulted. (Lender/Location and Servicing Group are set to Agent's Customer Location and Servicing Group, pricing is set to Full Borrower Interest, Ongoing and Upfront Fees, Circle Create User is set to user sending deal to approval. Circle Date is set to the Create Date and the Circled Amount is set to the Current Amount.

Notes:

If the deal fails *Send to Approval* validation, the Sole Lender Origination Primary will not be created.

The amount left to syndicate is not checked at the deal level when deal is sent to approval, since each facility is checked for "left to syndicate" separately, and checking again at deal level is redundant (and incorrect in multicurrency deals).

Available in Release 6.0.12.11 with separately licensed enhancement Automatic Creation of Doc Tracking Items enhancement, the following applies. Licensed clients can automatically create and save Doc Tracking items whenever a Deal or Deal Amendment is sent to Approval. A list of Document Types for which Doc Tracking items can be created and saved is provided in the *Document List for Deal* window prompted once users send a Deal or Deal Amendment to Approval.

Document List for Deal

Attribute	Req/Opt	Size/Format	Rules
Select All	Optional	Button	Selects all the Document Type items to be available for Auto Creation.
Deselect All	Optional	Button	Deselects all the Document Types items from being available for Auto Creation.
Document Type	System Generated	Display	Lists the Document Type items available to be automatically saved and created in the new Deal or Deal Amendment.
Document Date	Required	Date	Date saved as Document Effective Date.
OK	Optional	Button	Sends the new Deal or Deal Amendment to Approval. Document Tracking items are auto created for all selected Document Types.
Cancel	Optional	Button	Exits *Document List for Deal* window without saving any changes.

Approve Deal

System refers to the Approvals Matrix (setup in the Maintenance Image) to **determine the approval requirements for this deal.**

If the user sending the deal to approval also qualifies as an approver of the deal, **sending the deal to approval will also approve it**. If only one approval is required for the deal, deal status will be updated to *Approved* and a Deal Event will be created to record the action.

If more than one approval is required, deal status remains *Awaiting Approval*, and user may select the **Show Approval Status** option to determine the remaining approval requirements.

The Deal's Approved Date is updated by the final approval (the one that changes the Deal Status from *Awaiting Approved* to *Approved*). If deal is subsequently returned to pending status, Approved Date is reset to nil. Deal Approved Effective Date **cannot** be changed.

For further details, please see separate document, *Misys Loan IQ Approvals Matrix Edit & Validation Rules*.

Close Deal

Closing Deal in which Host Bank is a Lender:

In order to close the deal, the following tests must be passed:

> Deal status must be *Approved*, and all edit checks that were required to send the deal to approval must be reapplied, and must be passed again. In addition:
>
> Interest and Ongoing Fee Pricing must be valid.
>
> Deal Classification must be present.
>
> Every facility must have at least one risk type and one purpose code.
>
> Every facility must have either a maturity date or an estimated maturity/life.
>
> If Host Bank is Agent or Sole Lender, every Borrower in Deal must have an assigned Servicing Group, and the Agent's Servicing Group must have a Branch.
>
> If Sole Lender Deal, no primaries other than the Sole Lender Origination Primary can exist.
>
> **Deal Closed Date** (effective date of deal closing) defaults to current business date, but may be overridden to **any earlier date not less than the Deal Agreement Date**, if one exists, and **less than or equal to the earliest facility effective date**. **Must be a valid business day.** The system performs an edit to ensure that none of the facilities has an effective date prior to the proposed deal closed date, and that none of the facilities with a blank effective date has a credit agreement date greater than the proposed deal closed date.

> **Note:** The Approved Date is the Business Date on which the Deal was approved. However, when the Deal is Closed, it may be closed as of an earlier date.

Closing the Deal **automatically closes all of the primaries.** The sum of all the **closed origination and distribution primaries** is checked against the total deal and facility amounts. **If another bank is agent, a warning** will be issued (which may be overridden) if the total lender share amount is less than the aggregate deal and facility amounts, and an **error** is issued if total lender share amount is **greater** than the aggregate deal and facility amounts (and deal cannot close). **If Host Bank is Agent,** the deal **cannot close** unless the total lender share amount **exactly equals** the aggregate deal and facility amounts. (For example: System does not handle pro ration rounding across Circles – it only adjusts pennies within individual circles. A deal with two facilities and three primaries prorated across both facilities will result in a negative penny not syndicated.)

However, in the case of multicurrency deals, **deals can be closed with penny discrepancies**. The primaries' shares of the individual facilities (which are in the currency of each facility) **must** add up, but are not validated against the deal total (which is an aggregation of facility amounts).

After the deal and all primaries are validated for close, the primaries are saved and committed one at a time. If several primaries have been closed and an error is encountered while closing a subsequent

primary, the deal will not close and neither will the remaining pending primaries. When the deal is subsequently closed, the remaining primaries will be closed automatically.

Note: There is **no accounting** associated with closing a primary or closing a deal. For the accounting associated with the distribution of Upfront Fees please refer to Deal Payment Option Upfront Fee Distribution to Primaries.

Error messages will be issued as applicable. If no error conditions exist, the user will be asked whether or not the deal closing should proceed.

If the user elects to proceed with the deal closing, the following occurs:

Deal Status is updated from *Approved* to *Closed*.

Deal becomes **Unrestricted** and **Early Discussion Indicator is turned off.**

Deal Closed Date flows down and replaces all blank Facility Effective Dates.

Deal Closed Date flows down to all Borrower Effective Dates in all Facilities, **if Borrower Effective Date is not already present.**

All primary circles are closed.

The Target Date in all open approved circles is set to 14 days after the Deal Closing Date.

Sole Lender Name flows down to Administrative Agent field, if Host Bank share exists with role of Sole Lender and no Admin Agent is present.

A Deal Event is created to record the Deal Close action.

The Release Date in the Facility Close Transaction is set to Facility Effective Date.

Beginning with Release 6.0.10.05 (Patch), the following applies as per the separately licensed enhancement, Transaction Cost Calculation and Amortization:

When the transaction cost is calculated based on “Commitment Amount", closing a deal while also closing the host bank primaries causes a transaction cost adjustment, effective the same date as the deal effective date.

When transaction cost is based on “Commitment Amount", the amount of the adjustment is calculated as follows:

The amount change to the facility portfolio share amount * Current Transaction Rate

The effective date of the Transaction Cost is equal to the settlement date (Circle Close Date) of the Circle Buy.

Available in Release 7.1, the following Warning if Pricing is Changed or Approved with Zero or Negative Spread functionality applies:

To reduce risk on processing an incorrect interest payment, an overridable soft warning is generated when a zero or negative spread is entered.

At Deal closing, LIQ checks if some spreads have been entered with zero or negative values in one or more facilities. Loan IQ checks all the facilities attached to the selected deal.

The warning is generated when double clicking on the following workflow items in the Deal Notebook:

Send to Approval

Approve

Close

The soft warning message is "*Zero or negative spread has been entered. Do you wish to continue?*"

Non-Host Bank Deals:

Non-Host Bank Deals will **be created as Unrestricted Closed deals.** Their deal status will always be *Closed*, and all life-cycle deal options (*Return to Pending*, *Send to Approval*, *Approve Deal*, *Close Deal*, *Commitment Letter Received*, *Deal in Pipeline*, *Deal Died*, and *Unrestrict Deal*) **will not apply** to them because they are already closed.

The Non-Host Bank Deal will have a Deal Closed Date (defaulted to date deal is created, but able to be overridden to an earlier date), and the underlying facilities may each have a Facility Effective Date.

All actions and updates available to **closed** deals and to facilities attached to **closed** deals will be available to the closed Non-Host Bank deal and facilities.

Terminate

Terminate Option is available only to closed deals. User calls up an existing closed deal, selects the **Terminate** option, and enters the Effective Date of the termination. All of the facilities belonging to the deal must be already terminated, or the request to terminate the deal will be denied. **Deal's Selling Stage is set to *Not for Sale*; and the Inactive indicator is set to *Yes* (inactive).** Trading line dies with the terminated deal. All baskets and positions will already have been updated when the facilities involved were decreased down to zero, so no additional updates need to be made to trading usage upon the termination of the deal itself.

Collateral accounts linked to a terminated deal are removed and restored to *Not In Use* status, appropriate *Remove Collateral* events are written in the Deal Notebook, and the deal is marked as *Not Secured*.

A Deal **cannot** be terminated if any active accruing Admin Fees or Unamortized Admin Fees exist. For Amortizing Admin Fees, the unamortized amount must equal zero.

Attribute	Req/Opt	Size/Format	Rules
Effective Date of Termination	Required	Date	Defaults to current date, but may be overridden by any valid date greater than the Deal Closed Date and not greater than current date.

Deal Died

Deal Died Option is only available prior to closing the deal. User selects this option in order to **cancel the Deal.** Selecting the option brings up a window with a list of the Deal Died Events (no default), an Effective Date set to current date and an optional comment. User selects one Deal Died Event from the list and may override the effective date to an earlier date. **Deal's Selling Stage (visible in Sales Targets) is set to *Not for Sale*; all existing circles are cancelled and their portfolio allocations are reversed, and the deal's Inactive indicator is set to *Yes* (inactive).** User may later drill down on the logged event and change its Effective Date to any date earlier than the current date, or may change the date via the **Effective Date** button. Please note that changing the effective date of the *Deal Died* event does **not** change the effective date of the *Cancelled* event. Cannot exercise this option on a **Non-P&L Day.**

Attribute	Req/Opt	Size/Format	Rules
Deal Died Event	Required	Table: Deal Died	Select one event describing why the deal died from list of (active) codes. No default.
Effective Date	Required	Date	Defaults to current date and may be overridden to any earlier date.
Comment	Optional	256 Char	Free-Form comment may be entered.

Note: If a deal is Restricted when it is cancelled, the **Restricted** indicator remains checked so that if it is revived it will retain its unrestricted status and the same rules regarding unrestricting a deal will apply as before deal was cancelled.

Return to Pending

Option is available only to approved deals and to deals that are awaiting approval. Deal status is reset to *Pending*, and a Deal Event is created to record the Option. Any optional comment entered by the user to explain why the deal is being returned to *Pending* Status, will be included in the Event.

Revive Dead Deal

Revive Deal option is only available to deals that were cancelled prior to deal close. It does not revive terminated deals, only those set to *Inactive* status via the **Deal Died** option. Selecting this option requires user to confirm that the deal should be brought back to life, and then Deal Status is reset to *Pending*, and a *Revive Deal* event is created.

Reviving an Inactive Deal that is *Not For Sale* does **not** reset the selling stage, which remains as *Not For Sale*.

Verify

Action is available to any deal in any status, and no change in deal status occurs automatically as a result of this action. The action is primarily intended to determine if a Host Bank circle attached to a Closed but Unverified Host Bank deal will be able to be closed.

A closed non-host bank deal will only become a closed unverified host bank deal when the host bank actually buys into the commitment (as a secondary sale, i.e., Assignment or Participation).

Invoking **Verify** performs most of the validations normally performed for a Host Bank Deal at *Send to Approval* and at Deal Close and issues error messages as appropriate. Passing the **Verify** tests does not automatically mark an unverified deal as *Verified*. However, if all **Verify** validations are passed, and the deal is a Closed but Unverified Host Bank Deal, the user will be asked if the deal should be marked as *Verified*.

> If user responds *No*, the Closed Host Bank Deal will remain *Unverified*.
>
> If the user responds *Yes*, the Closed Host Bank Deal will be marked as *Verified*, and the Host Bank circle will then be able to be closed.

Note: Verifying an unverified deal resulting in a change in deal status (to *Verified*) is subject to the on-line approvals framework. If Approvals Matrix indicates that *Processor may Approve*, the last processor evaluated is the user who last made an update (of any sort) to the deal.

The following validations are included in **Verify Deal**:

Deal Agent must exist (Customer, Location and Servicing Group must all be present) and Servicing Group must have a Branch).

At least **one borrower** must exist in the deal, and associated Borrower Location must be **complete.**

Deal Classification and Deal Expense Code must be present.

At least one facility must exist in the deal, and every facility must have a primary borrower, a non-zero commitment amount, a Processing Area, at least one Risk Type, at least one Purpose Code, a Maturity Date or Estimated Maturity/Life, and a Facility Control Number (FCN) that is different from the system-assigned default value. If required by its Facility Type, every facility in the deal must have a Facility Agreement Date, Facility Expiry Date and/or Facility Maturity Date.

Prior to Deal Close, the Global Deal Proposed Commitment Amount must equal the aggregate of the Proposed Commitment Amounts in all of the associated facilities.

If Host Bank is Agent, the sum of all the closed origination and distribution primaries **must strike** to the aggregate deal and facility amounts. **If Host Bank is not the Agent**, a **warning** will be issued if the sum of the closed origination and distribution primaries is **less than** the aggregate deal and facility

amounts, but user will be able to override the warning and continue with the verification, and an **error** is issued if sum is **greater than** the aggregate deal and facility amounts.

Since all primaries are closed automatically as a by-product of Deal Close process, **Verify** validates that all primaries are ready to be closed.

Beginning with Release 5.5.07.08 (Patch) and Release 5.5.10.02 and forward, as per the separately licensed enhancement entitled Processing Area and Deal Classification Combination Error Message, the following functionality applies:

Validation is added to deal closing validation:

If there are active branch and processing area and deal classification row(s) in the new Branch and Processing Area and Deal Classification code table, then for each facility in the deal, if its branch/processing area and the deal classification do not match an active row in the table, an error is displayed.

If there are active branch and processing area and deal classification row(s) in the new Branch and Processing Area and Deal Classification code table, then for the deal, if its branch/processing area and the deal classification do not match an active row in the table, an error is displayed.

If there are no rows defined at all for a branch or if there are no active rows for a branch in the new Branch, Processing Area and Deal Classification code table, then there is no validation at all for that branch.

Show Approval Status

This functionality is available **only** to Pending deals or deals that are Awaiting Approval.

Send to Approval User- Displays the User ID of the person (if the transaction has been sent to Approval, but not approved) who sent the Deal to Approval. Clicking the **Send to Approval User** button displays the User's full name.

Rules in Effect - List Box displaying all rows from the Approvals Matrix that apply to this transaction. An asterisk (*) is shown next to every requirement that has already been met. Drilling down on a selected row brings up the *On-line Approval Detail Viewer* window, which includes the **Approvers 1-4 List Box**, displaying the Approver #, Rank and User ID of every user to approve this transaction so far, and the **Approvers Affected Locations List Box**, which, if approvers are required by location, displays the affected location and the users from each location who have approved the transaction so far.

Approvers - List Box displaying the User ID, Rank, Date & Time, Location Description and whether or not warnings occurred, for every approver of the transaction.

For further details, please see separate document *Misys Loan IQ Approvals Matrix Edit & Validation Rules*.

Deal – Queries Menu

The following Queries are accessible to users while in the Deal Notebook:

Amendment Query

Bank Group Contacts

Bills/Payoffs

Collateral vs. Group Outstandings

Document Tracking

Notices

FHAD

Horizontal Lender Query

Lender Query

Lender Shares

Matched Buy/Sell Download

Notepad Entries

Ongoing Fee List

Outstanding Select

Outstandings Query

Risk Book Available for Sale

Syndication Fees Download

TOW Sheet

Trading Lines

Amendment Query

User chooses this option to see a list of all Amendments associated with this deal. Amendments are listed in chronological order by date. "Applies To" information, Amendment Status and Effective Date are also displayed. Drilling down displays the various transactions associated with a particular amendment, and the Transaction Type, Status, Effective Date and Amount are shown for each listed transaction. **Expand All** and **Collapse All** buttons are provided to expand and collapse the display. Selecting the **Open Notebook** button with focus on a selected Amendment or underlying Amendment Transaction opens up the particular Notebook (for that Amendment or Amendment Transaction, as applicable). User may also create a **new** Amendment from the *Query* window, by selecting **Add** button.

Balance Inquiry Report

The Balance Inquiry Report is available beginning with Release 6.0.08.02.

Select this option to invoke the Balance Inquiry Report. This is a consolidated report that shows facility/fee/outstanding/lender shares vitals such as global commitment, available to draw amounts and interest and fee receivables. The report provides balance inquiry by Facility, for past and current dates (future activity is not included), for the global amount and all lenders including host bank. Additionally, this report responds to clients' incoming audit confirmations.

When invoked from within the Deal Notebook (this report may also be invoked from the Facility Notebook), a detailed picture of all outstanding balances and all interest and fee receivables and fee payables is presented, as of a selected past or current date, for the selected Borrower or selected Lender, facility by facility, within the given deal.

The user may select to invoke the report by three different view types: **Borrower View** (default), **Host Bank Lender View** and **Non Host Bank Lender View.** A drop-down list is provided and allows the user to select from any other Borrowers or Third party Fee payers (Borrower View), or if there is more than one Lender (Host Bank Lender View) or more than one Non Host Bank Lender (Non Host Bank Lender View). The **As-Of** date defaults to the Current Business Date but may be modified as desired.

Each of the three views has its own customized layout. Please refer to the *Misys Loan IQ How to Prepare for the 2007 User Group Enhancements 6.0.08.02* for sample reports as well as a detailed explanation of each field on the report and additional report functionality.

Bank Group Contacts

Brings up the *Bank Group Contacts* display window, showing following **Servicing Group** information for **every Lender** in the indicated Deal: Lender Legal Name, Servicing Group Alias, Contact Name, Primary Fax Number and Primary Phone Number. **Print** and **Export** buttons are also available.

Lenders are listed in order by Lender Name, and participants are clearly identified.

Servicing Groups within Lender are listed in order by Servicing Group Alias.

Within Servicing Group, Contacts are listed in Contact Name order, along with their Primary Fax and Phone Numbers.

Bills/Payoffs

User may elect to see all bills and/or all payoff statements that have been created for this **deal**, or may set search parameters on the *Bill/Payoff Query Specification* window (see below) to further refine or expand the search operation.

Attribute	Req/Opt	Size/Format	Rules
Due Date Specification			
Start Date	Optional	Date	Defaults to current date, may be modified, but must be less than or equal to the end date. Must be specified if End Date is specified. Only bills/payoff statements whose Due Date is within the specified date range will be retrieved.
End Date	Optional	Date	Defaults to current date, may be modified, but must be equal to or greater than the start date. Must be specified if Start Date is specified.
Status Specification			
Status	Required	Indicator (Radio Buttons)	Defaults to *Exclude Archived* but may be changed to either *Archived Only* or *All Status Codes*.
Type Specification			
Type	Required	Indicator (Radio Buttons)	Defaults to *Bills Only*, but may be changed to either *Payoffs Only* or *Both*.
Deal	Optional	Deal Name	Defaults to this deal's name. May be changed to another deal or left blank. If blank, all Bill/Payoff statements are displayed that meet the selected criteria (status and type).

Borrower	Optional	Borrower Name	No default. User must enter a borrower name to select data for this borrower only.
OK	Optional	Button	Brings up *Bill/Payoff Query Results* window.
Cancel	Optional	Button	Exits *Bill/Payoff Query Specification* window without saving any changes.

Bill/Payoff Query Results

Attribute	Req/Opt	Size/Format	Rules
Selection Criteria	System Generated	Display	The specific selection criteria set for retrieval of the Bills/Payoff Statements is displayed at the top of the window.
Bill/Payoff List Box	System Generated	Display	The Contact Name, Status, and, if not specified in the search criteria, the Deal Name and/or Borrower Name of all Bills/Payoff Statements that meet the specified search criteria are displayed for user selection. In addition, an identifying Description is displayed for the Payoff Statement, composed of the User ID, Deal Name (first 25 characters) and Date/ Timestamp noting when the payoff statement was requested. User drills down or may use the **Select All** or **Deselect All** buttons to select/deselect specific bill(s)/payoff(s).
Refresh	Optional	Button	Refreshes Bill/Payoff Query results.
New Query	Optional	Button	Brings up *Bill/Payoff Query Specification* window, so user can enter search parameters for a new query.
Review	Optional	Button	Brings up selected Bill/Payoff Statement for viewing, and allows user to Print, Notice and/or Archive it, and if properly authorized, to Delete it. Beginning with Release 6.0.09.11 and forward, as per the enhancement entitled Enhanced Billing, the following functionality applies: The online Demand Bills and Payoff Statements are formatted and viewable as PDF documents. Users are allowed to Open PDF to view the documents and via Notice, authorized users can send the PDF as an Email attachment. Bills/Payoffs created prior to this enhancement remain in the current format and are not converted to PDF.
Print	Optional	Button	Prints (and archives) the selected Bill/Payoff Statement.
Notice	Optional	Button	Notices (and archives) the selected Bill/Payoff Statement.
Archive	Optional	Button	Archives the Selected Bill/Payoff Statement.
Select All	Optional	Button	Selects all of the displayed Bills/Payoff Statements for processing.
Deselect All	Optional	Button	De-selects all of the bills/payoffs previously selected for processing

Sort	Optional	Button	Brings up *Column Sort & Order* window, allowing user to change the sort order and/or the column positions of the information displayed on the *Bill/Payoff Query Results* window.
Regenerate	Optional	Button	Beginning in Release 6.0.09.02 and forward, generates a corrected bill, allowing user to correct any erroneous information then regenerate online. Applicable only to regular bills and not Demand Bill or Payoff Statement.
Cancel	Optional	Button	Returns user to Deal Notebook.

Collateral vs. Group Outstandings

Brings up the standard *Collateral vs. Group Outstandings* window displaying relevant information regarding collateralized outstandings. Information listed is summarized at the level at which the outstandings are secured (Deal, Facility or Outstanding). In addition to the Deal/ Facility/ Outstanding Name, the Secured Level, Collateral Requirements, Discounted Eligible Value, Collateral Deficiency, Excess Collateral, Percent Secured, Outstandings, Market Value, Eligible Value and Collateral Threshold are displayed, and the user may drill down to view further details.

Beginning with Release 6.0.10.05, the following applies as per the separately licensed enhancement, Collateral Enhancements.

Collateral Account Notebook is modified:

Adjusted Gross Collateral Amount set to the sum of the adjusted gross amounts of all the holdings in the account. However, as with this field in the holding, it is not displayed but must be available for reporting:

Market Value field is renamed to Gross Collateral Amount.

Eligible Value field is renamed to Net Collateral Amount.

Collateral Account is modified to also show the current values.

The Document button is added to access Document Tracking.

For further information, please see separate document *Misys Loan IQ Collateral Edit & Validation Rules*.

Daily Net Investment Calculation

This is separately licensed functionality that enables the user to run and view a query to display a Real Time Net Investment Calculation. The calculation is generated at the Outstanding level but is aggregated to the facility, deal and customer levels. The online query displays real-time calculations that take into consideration any activity posted during that processing day. The Deal query displays the net investment for the deal and aggregates each facility's net investment. **The ability to Print and Export (to a .csv file) the query is provided**. Additionally, the user may drill down on all the queries to view the components of the Loan IQ calculation.

Licensed clients should refer to the *Misys Loan IQ Net Investment Calculation Technical Setup Guide and the Misys Loan IQ Net Investment Calculation User Guide* for further information. If you are not a licensed client and would like more information about the Net Investment Calculation functionality, contact your Misys Loan IQ Account Manager.

Deal Summary Query

Beginning with Release 6.0.09.02 and forward, the Deal Summary Query option brings up the *Deal Summary* window displaying summary information from the Summary, Pricing Rules, Fees, and MIS Codes tabs, and Facilities option on the Deal Notebook. Each category displayed is a summary of the information found in each detailed tab of the notebook.

Document Tracking

Option is available to users who are authorized (in **User Profile**) to enter Document Tracking. Provides navigation to Doc Tracking, where user may view/update existing and/or create new document tracking records for this Deal. For further details, please see separate document *Misys Loan IQ Document Tracking Edit & Validation Rules*.

Exceptions

Selecting **Queries > Exceptions** opens the Logged Exception List window. All exceptions pertaining to the deal are displayed. If there are no exceptions, the user receives a message stating, "No exceptions exist for this activity."

This functionality is separately secured.

Notices

Brings up the *Notice Group Listing* window displaying all (Deal Group) group addressed Notices associated with this deal for a **requested time range**. [**Note:** This time range refers to the actual time the Notice was generated]. The number of Notices are shown for each group, along with the number sent, number cancelled, number inactive, Create Date and creator of the group. User may drill down to process a group of Notices for this deal. (Dropping a deal onto the Notice Icon on the Loan IQ Desktop will also display all group-addressed Notices associated with the deal, for a requested time range).

FHAD

The Fees Hold Awaiting Disposition balance is captured at the **deal** level. Selecting the **FHAD** option brings up the *Fees Held Awaiting Disposition WIP Items* display window, showing the following information for every open WIP Item associated with Fees Held for this deal:

Effective Date, Expense Code, Currency, Amount Not Matched, Opening Balance and Description.

Drilling down on a Selected WIP Item brings up the WIP Item Browser in *Update* mode, and User may modify the WIP Description.

Buttons on the bottom of the window enable to user to **Print** and **Sort** the WIP items.

Notes:

Only **one** Fees Held balance may exist for a deal, **per currency.**

User may not delete a Pending Deal that has a Fee Hold Awaiting Disposition balance.

As per the separately licensed enhancement, Income and Expense Deferred to FHAD, available in Release 6.0.10.02, the following functionality applies:

Loan IQ creates one FHAD account per Deal/Facility/Branch/Currency, with the FHAD account being properly linked to or referenced to that appropriate Deal/Facility/Branch/Currency. A column is provided on the FHAD screen to display the name of the facility associated with the particular FHAD item.

In Loan IQ, the WIP accounts provide the link between the accounting entries generated from the release of transactions and the accounting entries generated from the release of cashflows as the two tasks are performed separately. When a transaction is released without the cashflow or vice versa, a balance will be created in one of the WIP accounts.

The FHAD account is used to temporarily hold the fee received from the borrowers, which may be partly distributed to other lenders via the syndication process. If other WIP account is selected other than FHAD account for fee, system defaults to create a new WIP item which will cause an error if you try to create a liability item with a debit or an asset item with a credit.

For more details, Please refer to the *Misys Loan IQ Income and Expense Deferred to FHAD Setup Guide*.

Horizontal Lender Query

User may elect to see (and export and/or print) all lenders in the deal, displayed in horizontal fashion (one facility after another, with totals on the far right). Primaries/Assignees are listed in the top half of the window, and, details regarding the Host Bank Net are shown in the bottom half. For further details, please see separate document *Misys Loan IQ Lender Query Edit & Validation Rules*.

Lender Query

User may elect to see (and export and/or print) all lenders in the deal. The Host Bank lender(s) appear in blue, at top of list, followed by the other lenders. For further details, please see separate document *Misys Loan IQ Lender Query Edit & Validation Rules*.

Lender Shares

Allows user to view Deal Level Lender Shares. Similar to Facility Level Lender Shares with the following exceptions:

When drilling down on servicing group shares or skim shares, the **Transaction History** button is not available.

Participation detail is a facility level function; therefore, when drilling down on participation shares, the skim list is displayed rather than the *Participation Detail* window.

When drilling down on portfolio shares, the shares are shown by facility portfolio bucket and summed (Sum of Portfolio Shares) in the deal currency. Therefore, if the deal is a multi-currency deal, rounding during currency conversion may cause the Sum of Portfolio Shares to be a few cents different from the Actual Amount shown since the actual amount is calculated from the net of servicing group and participation shares.

The **Lender Notebook** button is available to the General Loan IQ Audience beginning with Release 6.0.08.08. Select a Lender to enable the **Lender Notebook** button. Select the **Lender Notebook** button to open the Customer Notebook of the selected Lender. The Lender Notebook button is available only in the *Primaries/Assignees* and *Participants* sections of the *Lender Shares* window. The button is disabled unless a Lender is selected. Refer to the *Misys Loan IQ How to Prepare for the 2008 User Group Enhancements 6.0.08.08 SP* document for further details.

Matched Buy/Sell Download

Circle data for a given deal may be downloaded (in Create Date, Lender Name Order) to an Excel spreadsheet for Buy/Sell Matched Trade Analysis. The download may be selected from this query menu, or may be initiated by dragging the deal data icon over the Excel icon on the Loan IQ Desktop. The Lender, Circle Status and description (for example, Pending Internal Assignment Sell), Risk Book, Closed Date, Closing Amount and Current Amount are included in the downloaded information.

Notepad Entries

User may elect to see all entries on the notepad for the selected deal. The Notepad Query is a dynamic view, with sort and filter capabilities, similar to those offered with the Notepad Function itself. User may specify a date range filter and chosen notes will be displayed by deal name (default).

Ongoing Fee List

Available in Release 7.1, the following Fee ID on Fee Notebook and Fee Lists functionality applies:

Lists the Facility Name, Fee Alias (if licensed), Fee Type Name, Current Rate or Amount, Status, Effective Date and Expiry Date for every Ongoing Fee that has been defined for every facility within this deal. Drilling down on a selected fee brings up the associated Fee Notebook. Please see Ongoing Fee List Query in the *Misys Loan IQ Facility Edit &Validation Rules* document for further details.

Once an Ongoing Fee has been defined (and validated) in Deal or Facility Ongoing Fee Pricing Text, a Fee Notebook is created for it (with its own Options Menu and its own Events, Pending, Workflow and Accrual pages). For further details, please see separate document *Misys Loan IQ Fee Notebook Edit & Validation Rules*.

Outstanding Select

The following *Outstanding Select "All"* functionality is available beginning with Release 6.0 and forward:

Brings up the *Outstanding Select* window, initialized to search for Active Existing Loans for this Deal. However, user may modify search criteria to search for Inactive Loans and/or to search for other Outstanding Types (Intraday Loans, Discount Loans, Canadian Bankers Acceptances, non-loans, SBLCs and Repo Loans (active and/or inactive)) by Deal and Facility, by Borrower or by Outstanding Alias. User may also search for Pending or cancelled Transactions, or may create a pending Initial Drawdown which, when released, will become a new outstanding.

For details, please see separate documents *Misys Loan IQ Outstanding Edit & Validation Rules* and *Misys Loan IQ SBLC Edit & Validation Rules*.

Outstandings Query

Brings up the *Deal Outstandings Display* window, showing the Total Current Outstandings, Available Amount, Bank Gross Outstandings and Bank Net Outstandings for the indicated Deal, all translated into the currency of the deal.

> **Total Outstandings** = Populated as the aggregate of the Current Outstandings for the associated facilities within the deal.
>
> **Bank Gross** = Populated as the aggregate of the Gross Outstandings for the associated facilities within the deal.
>
> **Bank Net** = Populated as the aggregate of the Net Outstandings for the associated facilities within the deal. Suppressed unless user has Inquiry or Update access to *View Net*.

Note: All aggregate amounts will be displayed in the **currency** of the deal and the **currency code** will appear in the title bar, i.e., USD, GBP.

Also displayed are the outstandings for every facility in the deal, translated into the currency of the deal. In addition to the Total, Bank Gross and Bank Net Outstandings, the Available to Draw is shown for each facility. Drilling down on a facility expands the display to show the relevant Outstanding figures for every Borrower in the facility, again translated into the currency of the deal.

Risk Book Available for Sale

Displays detailed commitment and circle information for the Host Bank regarding the **availability for secondary sales of the selected deal, based upon Risk Book.** Includes Available to Assign and Available to Participate for the Deal by Facility, by Risk Book, and by Risk Book within Facility. All information displayed is derived by the system. For further details, please see separate document *Misys Loan IQ Available for Sale Edit & Validation Rules*.

Send Positions

Beginning with Release 6.0.08.08 (Patch), the following separately licensed Markit Clear Inventory Messages functionality applies:

When the menu option is selected users can trigger Loan IQ to generate the following notices for the Deal:

One Deal Take-On Notice includes all active facilities with the facility SLM Eligible checkbox checked

One lender level Position Update notices with type - Position Statement for each lender with non-zero facility contractual lender shares. Lender notice will include all active facilities with the facility SLM Eligible checkbox checked

Note: The Send Positions option is only available when the following conditions are met; otherwise, the option is hidden:

The Deal SLM Eligible indicator is checked and

At least one underlying facility has Facility SLM Eligible indicator checked

When the **Send Positions** option is selected a *Send Inventory Message* window is opened.

Send Inventory Message

Attribute	Req/Opt	Size/Format	Rules
Last Sent	System Generated	Date	Displays the date that the last Deal level notice was generated regardless if it is a Deal Take-on notice or Deal Definition Notice. Not updateable.
Recreate Deal	Optional	Button	Is enabled and Loan IQ defaults selection to the radio button when the Last Sent date is not null. The Send Inventory Message window is closed after Recreate Deal button is pressed. Loan IQ will remove the date populated in the Last Send field and will behave as no Deal Take On notice had been sent for the deal. The Create Deal radio button is re-enabled and Amend Deal radio button is disabled after Recreate Deal button is pressed. To re-send the Position Update notice, the user needs to select Send Positions option again.
Create Deal	Optional	Radio Button	Is enabled when one of the following conditions is met: Last Sent date is null or The user manually enables the Create Deal radio button by clicking Recreate Deal button Radio button is protected when the Last Sent date is not null. When Create Deal radio button is selected, Loan IQ will generate the following notices for the deal: A deal take-on notice for each lender in the deal and a global deal take-on message Position Update notices with type - Position Statement for each lender in the deal

Amend Deal	Optional	Radio Button	Is disabled when the Last Sent date is null or when the Create Deal is active. Is enabled when the Last Sent date is not null. When radio button is selected, Loan IQ will generate a deal definition notice.
OK	Optional	Button	Loan IQ will generate the selected deal level notice. Loan IQ will populate the Last Sent date field in Deal level Send Positions with the current business date and the Last Sent date field in Facility level Send Positions.
Cancel	Optional	Button	Rollback changes made on the Send Inventory Message screen.

Swap Agreement Select

The following functionality is available in: Patch to 5.5.07.08, 5.5.08.02 & later releases, 6.0.08.02 & later releases.

Swap Security has been enhanced to allow clients the ability to control users inquiry and update rights on any details for the **Swap Agreements**. This is done as part of the setup and configuration of users security for Processing Area.

Please refer to the Swaps Agreement document for further information on Swap Security.

Swap Trade Positions

The following functionality is available in: Patch to 5.5.07.08, 5.5.08.02 & later releases, 6.0.08.02 & later releases.

Swap Security has been enhanced to allow clients the ability to control users inquiry and update rights on any details for the Swap transactions. This is done as part of the setup and configuration of users security for Risk Book.

Please refer to the Swaps Agreement document for further information on Swap Security.

Syndication Fees Download

Choosing this option downloads all primaries and all secondaries (assignments and participations) whose portfolio allocations note the user's branch, the *In Syndication* portfolio and any Expense Code, for all facilities included in the designated deal.

Primaries are identified by their roles in the deal (for example, *Agent*, *Co-Agent*, *Primary*, *Amendment Primary Sell*, etc.) and secondaries are identified (and sorted) as follows: *Assignment Sells*, *Participation Sells*, *Assignment Buys*, *Participation Buys*. User then updates protected Excel spreadsheet to perform syndication fee calculation.

Note: Amendment primaries converted from host bank assignments show up on the Syndication Fee Spreadsheet only if they were originally sold from an In Syndication Portfolio. Amendment Primaries converted from outside assignments are always included.

The download to Excel is performed either by dragging and dropping a deal data icon over the Excel icon on the Loan IQ Desktop, or by selecting this option from the deal's **Query** menu.

Notes:

When pooled sales are involved in a Syndication, only the Host Bank's share of the pooled sale, and the Host Bank's share of the fees paid, will be included in the downloaded data. Outside/Third Party Assignments are **excluded** from the Syndication Fees Download, but Internal Trades **are** included.

Syndication Fee - Fees Held and Syndication Fee functionality is at the Deal level:

FHAD Balance is captured at the Deal Level

All references to FHAD and WAC have been removed from In *Syndication Portfolio Position* windows (and from the database).

Fees will move from the Deal Level to the Portfolio Position as Discount, but the FHAD Subledger Balance will be maintained at the Deal level.

Note: Marketing circles display *Marketing Primary* in the **Role** column, instead of *Cancelled*, and **Linked** Circles display *Linked Primary* in the **Role** Column. Amounts are shown for marketing circles, but circles cancelled for other reasons display zero amounts. Therefore, all amounts (for both marketing circles and the circles to which they are linked) are included in all totals calculated by the spreadsheet.

Syndication Fee Download Query

Syndication Fees Download

Attribute	Req/Opt	Size/Format	Rules
Lender Listing			The following indicators are displayed for each listed lender: Order by, role, cloning, cloning date, current amount, circled amount, closing discount, circled discount, syndication age.
Export	Optional	Button	Exports the displayed information to the Syndication Fee Download excel worksheet.
Exit	Option	Button	Exits *Syndication Fees Download* window.

Once the lender listing information has been exported, select the Excel icon from the Actions folder. Double click on the Excel icon and from the *Excel* window select Syndication Fee Analysis.

TOW Sheet

User may choose to Print, Display or Export the Tow Sheet **(Total Obligor Worksheet) for this Deal.** It shows the Host Bank's total exposure for the **entire deal,** and includes the following information:

All of the facilities in the deal, together with their Global, Host Bank Contractual and Host Bank Net Commitments and Outstanding Balances.

All pending activity, including the effect of that activity on the facility commitment and outstanding balances.

Post Activity Outstanding Balances and Post Activity Available Commitments will be shown for each of the included facilities.

Trading Lines

Displays *Trading Line Detail* window, indicating whether or not a trading line exists for the deal.

Show Deal Sync Status

Available in Release 7.4.3, when licensed for **Asset Based Lending**, the following functionality applies: When a Deal/Facility is created/updated in Loan IQ; Loan IQ pushes this Deal/facility record to the ABL Borrowing Base module in real time. The sync between Loan IQ and the ABL Borrowing Base module will be triggered based on certain events as mentioned below:

Sync Type between Loan IQ and ABL Borrowing Base Module	Event Name	Comment
Auto Sync (Deal Creation Scenario)	Deal Closure event: "Closed" in Deal Note Book.	When a Deal is closed in Loan IQ, the deal is automatically created in the ABL Borrowing Base module real time.
Auto Sync (Update Deal Scenario)	Facility Addition "Created" in Facility NB	Auto-Sync is triggered when a new facility is added.
Auto Sync (Update Deal Scenario)	Deal Change Transaction - "Deal Change Transaction Released" in Deal Note Book	Auto Sync is triggered when a Deal Change Transaction is released.
Auto Sync (Update Deal Scenario)	Deal Amendment - "Amendment Released" in Deal Note Book	Auto Sync is triggered when a Deal Amendment is released.
Auto Sync (Update Deal Scenario)	Branch Change - "Branch/Processing Area Changed" in Deal Note Book	Auto Sync is triggered when the branch/processing area is changed.
Manual Sync	When Resync Button is clicked. "Deal Re- sync with ABL Collateral Module Completed" in Deal Note Book-> Queries-> Show Deal Sync status -> Re-sync	Manual Sync is triggered when the user wants to manually sync the deal.

A new menu option 'Show Deal Sync Status' is introduced in the Queries menu option. The Auto Sync with ABL Collateral Module (Deal Notebook : MIS CODES tab)should be checked for this option to be visible. When the user clicks on this option, the Latest Deal Sync Status with ABL Collateral Module window appears

Latest Deal Sync Status with ABL Collateral Module

Attribute	Req/Opt	Size/Format	Rules
Deal Sync Status			
Event	System Generated	Display	Displays the particular event which has triggered the Deal sync.(The various types of events are mentioned in the Table above)
Updated by	System Generated	Display	Displays the User ID of the Loan IQ user who has initiated the sync.
Last Updated	System Generated	Display	Displays the time stamp of the last updated posted on the Most Recent Deal Sync event .
Status	System Generated	Display	Displays the status of the Deal sync i.e. Pass or Fail
Details	System Generated	Display	Displays additional details received from the ABL Borrowing Base module system Example " *Error Code- 401: One or more*

			required properties is missing "
Re-sync Deal	Optional	Button	When the user clicks this button, the deal sync between Loan IQ and the ABL Borrowing Base module will be triggered.
Refresh	Optional	Button	When the user clicks this button, the data in this window would be refreshed to the Last updated deal sync.
Exit	Optional	Button	Closes the Latest Deal Sync Status with ABL Collateral Module window.

Past Due Amounts

As per the separately licensed enhancement, *Past Due Information,* available in Release 6.0.09.02 and forward, the option, **Past Due Amounts** is provided to display online information on past due amounts defined at the deal level for principal, interest and fees on closed deals. The query brings up the 'Past Due Amounts for" deal name screen, displaying past due information for the closed deal.

Next Payment Due Date: The adjusted due date for the oldest interest cycle not paid but past its due date for any outstanding under any facility under the deal, or principal based on a repayment schedule on any outstanding under any facility under the deal, or principal based on the decrease schedule for any facility under the deal that is not paid but past its due date.

Where there is no repayment schedule on the outstanding the next payment due date is the maturity date of the outstanding (excluding deposit/escrow deposit) if in the past, and principal exists.

Days Past Due: Actual number of calendar days from the next payment due date to the current business date.

Amount Past Due: The currency of the Amount Past Due.

Total interest for all cycles past due and any principal past due under all facilities under the deal.

Amount for Fees Past Due: The currency of the Amount for Fees Past Due.

Total interest for all cycles past due and any principal past due under all facilities under the deal.

Note: *Print* and *Export* buttons are provided to print the Past Due Amounts to a selected printer or export to a hard drive location.

Lender Shares buttons are provided to display the Lender and Portfolio Share amounts.

Available in Release 7.3, the Past Due and Delinquency functionality applies.

Past Due Amounts, displayed in Grid/Tree format, provides information from the Past Due Item Bucket table and displays the past due for any/all deal-level fees (for example: admin, on-going fees), plus all past due for any of the underlying facility on-going fees, and/or facility-level event fees, plus all past due for any of the underlying outstanding-level principal, interest and/or fees.

- Loan IQ displays the total principal interest, fees, and escrow amounts in the currency of the Deal. All the underlying facilities/outstanding's whose currency is different than the deal currency, the amounts are converted to the Deal currency using the spot rate that exists on the branch.
- Users can drill down and view the facilities and the total principal, interest, fees, and escrow in the currency of that facility. The underlying outstanding's that are in a different currency than the facility that they belong to are converted to the facility currency using the spot rate on the branch.

- Users can drill down further and view the total principal, interest and fees, and escrow in the currency of the outstanding for each loan that lies underneath the facility.
- Loan IQ displays the total principal, interest, fees and escrow amounts for the deal by the individual currencies under that deal. For example, if the deal has 2 USD outstanding's and 2 EURO outstanding's, users see the total USD past due amounts and separately see the total EURO past due amounts.

Note: The screen grid/tree control functions in the same manner as the Outstanding by Borrower screen.

This tree structure is used to display the past due amounts. Users can drill-down to view the past due amounts by Facility/Outstanding or alternatively select the 'Expand All' button and Loan IQ automatically displays all facilities/outstanding's information that exists under the deal.

- At the top level the total past due amounts for example: principal, interest, deal fees, are displayed in the currency of the deal.
- The bottom of the screen displays the totals of principal, interest, and fees of the deal in the currencies of the underlying outstandings.
- The top red line displays the **Deal name** alongside the totals, in red, of the past due amounts for each bucket (for all principal, interest, Deal Fees, Facility Fees, Outstanding Fees and Escrow). The final Total column at the end displays, in red, the total for each of the payment types for example: the total for principal that is past due across all the buckets.
- At the deal, facility, and loan alias levels, users can drill-down on Deal fees, Facility fees and Outstanding fees to view the individual fee.
    - For Deal fees / Facility fees/Outstanding fees users view the total fee amount and can drill down into the fees to the lowest level. For example: at the facility level for on-going fees users can drill down to see 'Unutilized', Facility Commitment.
    - For Outstanding On-going fees view the overall number of all Outstanding On-going fees then drill down and view Outstanding On-going fee 1, Outstanding On-going fee 2.
- The Days Past Due column displays the number of days based on the oldest past due for the deal. For example: Interest item 1 is past due 120 days and interest item 2 is past due 140 days. The 140 days isdisplayed in the Days Past Due column for Interest.
- When the deal name is expanded, users automatically see a list of facilities and their currencies. Users can expand the individual Facility and drill down to view a listof loans aliases and their currencies that are underneath that facility.
- Alternatively, the 'Expand All' button expands all the rows of data completely. All facilities and loans underneath the deal are immediately visible. Clicking the 'Collapse All' button collapses the view so that only the Deal level information is displayed.
- The Facility name and totals are displayed in 'Blue' and under the Facility there are loan and loan like outstanding types in Green. Under the Loan title the borrower aliases are displayed in green.
- When the Deal name is clicked the Deal notebook is displayed. When users click on the Facility name the respective Facility notebook is displayed. When users click in the Loan borrower alias the respective loan borrower alias notebook is displayed. (The actual notebook is displayed)

- For the Deal Level Fee category Loan IQ only populates this category with fees that apply at that level that are past due and place into the appropriate buckets. The fees are as follows:
    - Upfront
    - Administrative/Agency
    - Event
- The Past Due payment amounts are displayed individually by Principal, Interest, Deal fees, Facility fees, Outstanding's fees including late charges, Escrow.
- If the interest and principal past due amounts are part of the same repayment schedule, the principal amount and the interest amount go to the appropriate buckets. For example, P&I due are 500, principal portion is 150, and the interest portion is 350. The due date of this payment is 8/1/2013. Since this payment is over 30 days past due but under 60 days, 150 displays for principal and 350 for interest in the 31-60 bucket.
- At the deal/facility level the amounts are displayed in the currency of that level, however, displays the balances in the currencies of the facilities as well as the currencies of the outstanding's that belong to the facilities. At the Deal level, balances are displayed in both the Deal currency as well as the underlying base currencies of the amount past due.
  For example, a Deal is in USD, with a USD and GBP outstanding under that deal (both these outstanding have an amount past due), the GBP has interest past due between 0-30days and the USD outstanding has interest past due of over 60 days .

Deal – Distribution Menu

Access to the following actions is provided under the **Distribution** pull-down menu in the Deal Notebook:

Commitment Letter Received

Deal Info Updates

Pools

Primaries

Primary Offered Pricing

Saleability Holds

Saleability Terms

Sales Targets

Unrestrict Deal

Selecting this Option brings up a window with the Received on Date set to current business date. User may override to any earlier date. Once the *Commitment Letter Received* event has been logged, user may later drill down on it and change its Effective Date.

Attribute	Req/Opt	Size/Format	Rules
Received on	Required	Date	Defaults to current business date and may be overridden to any earlier date.
Comment	Optional	256 Char	
OK	Optional	Button	Saves the commitment letter received event
Cancel	Optional	Button	Exits the *Commitment Letter Received* window.

Deal Info Updates

Selection of this action presents the user with a pop-up dialog allowing the addition/modification of free-form comments regarding the deal that will be attached to the deal, but may be queried from both Deal Navigation and Deal Notebook. This will be our area for Amendment spreadsheets and other deal information. **Any user with update access to Deal Info Updates may modify information entered by other users.** Also, users may be granted update authority to **Deal Info Updates** without having access to the entire Deal Notebook.

As is the case with all text entered in 3000 character comment field in Loan IQ, text entered as free-form comment wraps at 84 characters. Text copied and inserted from WORD to comment field, via Shift/Insert, wraps at 84 characters. Text copies from EXCEL to Comment filed, via Shift/Insert, wraps at 84 characters when text is **less than 3000 characters.** When EXCEL text exceeds 3000 characters, it is **not copied,** and an informative message is issued.

Note: When deal info. Update is selected from the queries menu and a free-form comment is added an internal notification (**Deal Info Update**) is sent to the Distribution List in Notifications Matrix.

Pools

Pool set-up is optional if closed primary and/or assignee servicing group positions exist for the deal, else pools are not applicable. The same lender may appear more than once in a given pool, as long as each appearance is for a unique closed servicing group position for that lender.

A pool member's name is formed by concatenating the lender name, servicing group name and location name. Since this is rather long and may not display completely, a browser is available on the *Pooled Assignments* window (and in the *Pool Allocations* window in the Circle Notebook) that shows the full name of the selected pool member.

Pool may not be deleted if assigned to any circle in this deal (even one with a zero circle amount).

Pool members may not be deleted from pools if they have any allocations for pooled circles. Servicing groups cannot be deleted if they are assigned to any pool member. Modifications to a pool will cause all open circles affected by the pool to be returned to pending.

Selection of the **Pools** option brings up the Pool List for the deal, noting each Pool's Name, Start and Expiry Date, Original Amount and Percent of Deal, Available Amount, Closed Sales and Pooled Sales Amounts.

Pool Edit - Information noted as required is needed to **save** the pool.

Attribute	Req/Opt	Size/Format	Rules
Pool Name	Required	30 char	User defined and unique within deal.
Start Date	Required	Date	Defaults to Current Date. Cannot be less than Current Date. Cannot be less than the closing date of all primary pool members. Cannot be greater than Pool Expiration Date, if one exists.
Expiration Date	Optional	Date	No default. If entered, cannot be less than pool start date. When expiration date of pool is less than the current business date, the System no longer validates that the pool percent is greater than 100% or that the number of pool members is greater than one.
Pool Summary:			
Currency	System Generated	Code	Currency Code of the Deal.
Original	System Generated	System Amount Standard	Populated by the system as the aggregate of the individual pool member original shares.
Available	System Generated	System Amount Standard	Populated by the system as the aggregate of the individual pool member available amounts. (Available Pool Amount is calculated by the system as Original Pool Amount less all closed and approved pooled sales, and can never become negative).
% of Deal Global Original	System Generated	Percent	Populated by the system based on the formula: Original Pool Amount divided by the Deal Global Original Amount.
Closed Pooled Sales	System Generated	System Amount Standard	Populated by the system as the aggregate of the individual pool member's closed pooled sales.
Open Pooled Sales	System Generated	System Amount Standard	Populated by the system as the aggregate of the individual pool member's approved pooled sales.
% of Deal Global Current:	System Generated	Percent	Populated by the system based on the formula: Original Pool Amount divided by the Deal Global Current Amount.
Add	Optional	Button	Brings up *Pool Member Edit* window to add a new member to the pool.

Delete	Optional	Button	Deletes the selected member from the pool and recalculates remaining members' percentage shares. Cannot delete an individual pool member if existing circle pool allocations point to that pool member.
Agent	Optional	Button	Designates the selected member as the Pool Assignment Agent. One pool member must be designated as agent in order to save the pool.
Pool Member	Required	Short name	Only lenders in the deal with a closed servicing group position (primary or assignee) may be pool members. The same lender may appear more than once in a given pool, as long as each appearance is for a unique closed servicing group position for that lender. Normally, in order to save the pool, at least two pool members must exist. However, this rule does not apply if the Pool Start and Expiration dates are the same date (to accommodate those situations where a primary did not close before the deal closed, and is not really coming in through a pool). Note: Host Bank need not be a member of the Pool. Note: Lenders with the dummy Servicing Group (*None*) may not be added as pool members, even in deals where a Host Bank is not Agent.
Original Amount	Conditional	System Amount Standard	Enter the Members' Original Pool Amount. The **% of Deal Global Current** is calculated/adjusted accordingly. Cannot remove a member who has a closed position in the pool.
% of Deal Global Current	Conditional	Percent	Enter the % of Deal Global Current. The **Original Amount** is calculated/adjusted accordingly.
Pro-Rate across Facilities	Optional	Button	If selected, the entered Member Original Pool Amount is pro-rated across the facilities in the deal. If pro-ration is not chosen, the user selects a facility and drills down to enter either the original pool amount or percentage for that facility (value not entered will be system calculated). Edit Rules: 1. When initially defined, the member's original pool amount in a facility cannot exceed the lender's contractual gross share of that facility. 2. Can never be decreased below the sum of the member's closed and approved pooled sales, since the member's available amount (calculated by the system as Member's Original Pool Amount less member's closed and approved sales) can never be negative.
OK	Optional	Button	Saves changes
Cancel	Optional	Button	Exits the window.

Primaries

Brings up the Primary List of all Primary Lenders in the deal **except** Amendment Primaries. User may drill down to enter Circle Notebook to see a particular primary lender's share, or **if properly authorized to create/modify Circles**, may **add** a new or **update** an existing **Origination or Distribution Primary** Lender. Since a syndicate may be set up with only member names, without specifying any dollar amounts and/or percentages, the user may exit directly back to the Deal Notebook (returning to this Primary List tab). However, before the syndicated deal can be closed, the deal must have facilities and each member's share of the syndicate must be established. **If Host Bank is the Agent,** the total of all **origination primaries and distribution primaries must strike** to the global amount of the syndicated deal. If Host Bank is **not the Agent,** a **warning** (which may be overridden) will be issued if the total of all primaries is **less than** the global deal amount, and an **error** is issued if the total of all primaries is **greater than** the global deal amount.

All primaries are automatically closed when a Host Bank deal is closed, and may not be closed independently by the user.

No primary (Host Bank or Non-Host Bank) can be added to a closed Host Bank Deal.

Host Bank primary cannot be added to a closed Non-Host Bank Deal.

Non-Host Bank primary may be added to and/or closed on a closed Non-Host Bank Deal.

In order to manage deals more efficiently prior to close, an optional **Allocate** button is available, so that the user may change allocated amounts without having to repeatedly enter and exit from the Circle Notebook. A breakdown of Proposed Commitment into *Underwriters* and *Others* is provided, as well as a breakdown of Allocated Commitment into *Deal*, *Host Bank Share*, *Non-Host Share* and *Not Syndicated*. For further details, please refer to the *Misys Loan IQ Circle Notebook Edit & Validation Rules*.

Marketing Circles - Marketing Circles (circles cancelled for reason *MKTG*) will be displayed in the Primaries List (with a Status of *Mktg*) and will be included in the Proposed Commitment Totals, but will not be included in the Allocated Commitment Totals and will not be shown on the *Primaries Allocation* window.

Linked Circles - A **linked** primary (a primary that has been linked to a marketing circle) should **not** be flagged as an underwriter. Linked circles are excluded from proposed commitment amount calculations and are excluded from the underwriter totals (even if flagged as an underwriter).

Primary List Window

Attribute	Req/Opt	Size/Format	Rules
Admin Agent	System Generated	Lender Name	Flows down from deal, and is display only.
Currency	System Generated	Display	Displays the currency of the deal.
Primary Lenders	Conditional	List Box: Short Name	List of current primary members displays Short Name, circle type and status, Proposed Commitment and Allocated Commitment Amounts, Underwriter Indicator and Location. (Linked circles display *Linked* in the **Proposed Commitment** columns.) To enter Circle Notebook to update an existing primary, double-click on lender name in the displayed list of current Primary Lenders. Note: When a lender's role as underwriter is changed (T/N), indicator will change for all primary circles for that lender.

Allocated Commitment Amount Totals	System Generated	Display	Displays in the currency of the deal values for the following sections: Deal: The sum of the global current commitment of all the facilities. Host Bank Share: That portion of the facility current commitment allocated to the host bank as a result of the creation of origination primaries. Non-Host Bank Share: That portion of the facility current commitment allocated to non-host banks as a result of the creation of origination primaries. Not Syndicated: That portion of the deal amount not allocated to an origination primary. Note: When amounts are changed on the *Primaries Allocation* window, they are now aggregated on the facility level. Previously, aggregation was done on the deal level. Now, if facility level aggregation does not sum up, an error message is displayed showing facility name, facility closing amount, and new allocated amounts. The error message box, displays all facilities where the sum of allocated amounts does not equal facility closing amount.
Proposed Commitment Totals	System Generated	Display	Underwriters: That portion of the origination primaries allocated to underwriters. Others: That portion of the origination primaries not allocated to underwriters Note: If the currency of the facilities is different from that of the deal, all the above amounts have been converted to the deal currency using the facility's FX rate (Restrictions Tab). This window is refreshed automatically whenever an FX Rate changes, provided the deal is not closed. Once closed, the amounts are frozen.
Add	Conditional	Button	Option selected to add a new member to the syndicate is available only prior to deal close. Primaries cannot be added to a closed deal. Brings up the *Create Primary* window (a version of the *Lender Commitment Selection* Screen). Note: **Add** button is enabled only for users authorized to create circles, regardless of their access to Deal Syndication. Update Access to Deal Syndication allows users to make any changes on *Deal Primaries* window other than adding/updating primary circles.
Allocate	Conditional	Button	Not applicable to Closed Host Bank Deals, and brings up the *Primaries Allocation* window, allowing the user to change the shares for all primary lenders at one time.
Export	Optional	Button	Exports all information displayed in Primary Lenders List Box to a file that can be imported to a spreadsheet application for further risk analysis by deal structure.
Print	Optional	Button	Provides hard-copy print of all information displayed in Primary Lenders List Box.
Sales Targets	Optional	Button	Not applicable to Closed Host Bank Deals, and brings up the *Sales Target* window. (See the

			Misys Loan IQ Sales Targets Edit & Validation Rules).
Exit	Optional	Button	Exits the *Primaries List* window.

Primaries Allocation Window

Attribute	Req/Opt	Size/Format	Rules
Effective Date	Required	Date	Defaults to current date, but can be changed to an earlier date.
Primary Lenders	System Generated	List Box	Displays the Deal Currency, Proposed Commitment, Current Commitment, Allocated Commitment, **Underwriter** indicator (*Y/N*), and Location for every unconcealed primary lender in the Host Bank Deal. As user enters changes, the new allocation amount for each primary lender is always reflected in the **Allocated Commitment** column. Note: Marketing circles are excluded (as are all other cancelled circles), and Linked circles display *Linked* in **Proposed Commitment** column.
Expand	Optional	Button	Allows user to show and change allocations by facility for a selected primary lender. (Facility Currency is displayed on facility allocation lines).
Collapse	Optional	Button	Allows user to hide the allocations by facility for the selected primary lender.
Expand All	Optional	Button	Allows user to show and change the allocations by facility for all primary lenders
Collapse All	Optional	Button	Allows user to hide the allocations by facility for all primary lenders.
Pro Rate	Optional	Button	Allows the user to calculate each lender's share of the deal closing amount, based on its pro-rata percentage. Note: For deals where all non-zero facilities are not in the deal currency, selection of the **Pro Rate** button causes an error indicating that the amounts must be entered at the facility level. Note: If any circle is awaiting settlement approval or settlement approved, an error message is displayed when drilling down on the primary or when the prorate button is pressed stating that one or more primaries is either awaiting settlement approval or approved for settlement and may not be updated. If the up or down arrow key is pressed while on the modify allocated amount window, the system will skip to the next item which it is valid to update, if any, and an informational message will be displayed for each skipped item.
Print	Optional	Button	Provides hard-copy print of all information displayed on the window.
Export	Optional	Button	Exports all information to a file that can be imported to a spreadsheet application
Notice	Optional	Button	Allows the user to send Notices of the allocated

			amounts to the Servicing Group. Notices sent prior to deal close will include pending as well as closed primary lenders. Notices prepared from this window include only Lender Name, Proposed Commitment and Allocated Commitment. (Current Commitment, Underwriter Indicator and Location are not included).
OK	Optional	Button	In order for the allocation transaction to be accepted, the following rules must apply: If host bank is Agent: - The sum of the allocation amounts must equal the deal closing amount. - The sum of the facility allocations for each circle must equal the circle allocation amount If host bank is not Agent: - The sum of the allocation amounts must be less than or equal to the deal closing amount. - The sum of the facility allocations for each circle must equal the circle allocation amount. Upon selecting OK, the system will make the appropriate changes to each circle's current amount. If the circle has not yet been circled, Loan IQ will automatically perform the circle function using the Circled/Legal Trade Date as the Effective Date and the current amount as the circled amount. The successful execution of the allocation function will create two events, both “as of” the effective date: 1). Deal Level Event. 2). Circle Share Change Event (Current Amount Only).
Cancel	Optional	Button	Exits the window without saving changes

Intralinks

Allows the user to associate the Deal to an Intralinks Workspace ID and Workspace Name.

Intralinks is separately licensed functionality. Licensed clients please refer to the *LenderBridge Functional Setup and User Guide*, and the *Misys Loan IQ IntraLinks LenderBridge Technical Setup Guide*. All other interested clients please contact your Misys Loan IQ Account Manager for more information.

Attribute	Req/Opt	Size/Format	Rules
Deal Name	System Generated	Display	Displays the Deal name.
Deal Alias	System Generated	Display	Displays the Deal alias.
Intralinks Workspace ID	Required	Numeric	The user must enter a valid Intralinks Workspace ID. The Workspace ID is provided by Intralinks.
Workspace Name	Required	Alphanumeric	The user must enter the Workspace Name associated to the Workspace ID. The Workspace Name is provided by Intralinks.

Auto Sync	Optional	Check box	Defaults to *No* (unchecked). If set to *Yes,* all related Deal information is automatically synchronized via batch processing.
Last Sync Timestamp	System Generated	Display	Displays the date of the latest synchronization to Intralinks.
Credit Contacts	Optional	Button	Opens the *Intralinks Credit Contacts* window. The information in the window is displayed in the following order: The Customer Master Account **Note:** If the Customer is not linked to a Master Account, then the Customer's Immediate Parent is displayed. The Lenders in the Deal The Lenders' Contractual Position Each Lender's Contacts as selected from the *Credit Contacts* window. **Note:** Contacts are not displays if the Lender's Contractual Amount is less than the value specified by the **ILCPT** (*Intralinks Contractual Position Threshold*) system parameter. The Contact's email address The Contact's telephone number
Sync Now	Optional	Button	Synchronizes the Deal information with Intralinks.
OK	Required	Button	Saves the changes and returns to the Deal Notebook

Primary Offered Pricing

The *Offered Fee Decision* window that appears when the **Primary Offered Pricing** option is selected is composed of a Facility Selection Box, and two lists of offered fees that apply to the selected facility (List of Upfront Fees and List of Additional Circle Fees). Pre-Closing Fee set up in Borrower Deal Pricing as an Upfront Fee **does not flow down** into Primary Offered Pricing.

Note: Loan IQ allows the user to save fee decisions for more than one facility. If fee decisions are being accessed for the first time, the defaults are set for all of the facilities, not only for the facilities that the user selected. If the fee decisions for a chosen facility have changed, the system no longer generates a message indicating that the fee decisions for that facility have changed and will be saved.

When **OK** is pressed (or **Cancel** is pressed and the user selects **Save and Exit**), all facilities which have changed fee decisions, are saved This includes facilities which previously have not been selected and this is the first time its fee decisions have been accessed or the first time they have been accessed since a change was made.

When Cancel is pressed and the user chooses not to save, all facilities that have changed fee decisions are rolled back.

Offered Fee Decision Window

Attribute	Req/Opt	Size/Format	Rules

List of Facilities	System Generated	Display	Displays the Facility Name, Status, Currency, Global Closing Commitment, Global Current Commitment, and Facility Type. Note: If a facility has been terminated, no new fee decisions can be created. However, any existing fee decisions will be listed.
Set Upfront Defaults	Optional	Button	Brings up a window allowing user to re-set the actual share of each listed Upfront Fee to: Current (Default) Borrower Offered None
List of Upfront Fees	System Generated	Display	Lists the Upfront Fee Type, Facility Share, Offered Share and **Include in Price** indicator (*Y/N*) for every Upfront Fee defined for the selected facility. Initially, The Offered Share of each fee defaults to zero, indicating that none of the upfront fees paid by the borrower are to be offered for sale to the lenders. Drilling down on a listed Upfront Fee brings up the *Fee Decision* window allowing user to view/modify the Upfront Fee details pertaining to this facility investment. Note: The amount of the facility share is expressed in the currency of the highlighted facility. The amount of the fee for each facility is calculated using the same ratio as that of the facility closing commitment (expressed in deal currency) to the deal closing commitment. This ratio is applied to the fee and then converted to the facility currency for display on screen.
List of Additional Circle Fees	System Generated	Display	Lists the Additional Circle Fee Name, Amount, Rate and **Include in Price** indicator (*Y/N*) for every Additional Circle Fee offered for this facility investment. Drilling down on a listed Additional Circle Fee brings up the *Additional Circle Fee* window.
Add	Optional	Button	Brings up the *Additional Circle Fee* window, allowing user to add a new Additional Circle Fee.
Delete	Optional	Button	Removes the selected Additional Circle Fee from the Offered Fee Decision worksheet.

Fee Decision for Upfront Fees

Attribute	Req/Opt	Size/Format	Rules
Upfront Fee Type	System Generated	Display	Appears in Title Bar. For example, *Fee Decision for: Origination*.
Upfront Fee Formula	System Generated	Display	Appears at top of Fee Decision window. For example, Global Current x Rate (20BP).
Flat Amount/Distribute All/Distribute, Retain	Required	Indicators (Radio Buttons)	If Upfront Fee is not distributed, indicates *Distribute, Retain*, the Distribute percentage will be *zero*, and the Retain percentage will be the calculated share (for example, *0.2%* or

			20BP). If Upfront Fee is completely distributed, indicates *Distribute All*, the Distribute percentage will be the calculated share (for example, *0.2%* or *20 BP*), and the Retain percentage will be *zero*. If Upfront Fee is to be partially distributed and partially retained, indicates *Distribute, Retain*, and the Distribute and Retain decimals shares will add up to the calculated share. Notes: Warning message is issued if rate for Distribute or Retain is negative. Unlike Circle Fee Decisions, the user may not select Flat Amount and enter the Flat Amount of an Upfront Fee to be offered to lenders. Only the percentage of fee to be offered may be modified. Upfront Fees that are set up as Flat Fees at the Borrower Level will show an Offered Share of *100 %*, if *Borrower* default is chosen.
Distribute/Retain Percentage Shares	Conditional	Percentage	Not applicable to Flat Amount or Distribute All. Neither the Distribute Percentage nor the Retain Percentage can be negative and both must be less than or equal to 100%. Note: Both are entered as percentages, and their sum will always be equal to 100%.
OK	Optional	Button	Exits the window saving changes
Cancel	Optional	Button	Exits the window without saving changes

Additional Circle Fee

Attribute	Req/Opt	Size/Format	Rules
Type of Fee	Required	Table: Additional Circle Fees	Select one (active) value from list of Additional Circle Fees.
Included in Price	System Generated	Display	Indicates whether or not the Additional Circle Fee selected is included in the Buy/Sell Price
Flat Amount/Circle Amount x	Required	Indicators (Radio Buttons)	Defaults to Flat Amount, but may be changed to *Circle Amount x*.
Flat Amount	Conditional	System Amount Standard	Required if Additional Circle Fee is being entered as a Flat Amount. Cannot be negative.
Percentage	Conditional	Percent	Required if Additional Circle Fee is being entered as a Percentage. Cannot be negative.
OK	Optional	Button	Exits the window saving changes
Cancel	Optional	Button	Exits the window without saving changes

Saleability Holds

Brings up Saleability Holds for the deal. For details, see document *Misys Loan IQ Saleability Edit & Validation Rules*.

Saleability Terms

Brings up Saleability Terms for the deal. For details, see document *Misys Loan IQ Saleability Edit & Validation Rules*

Sales Targets

Displays the sales target information and current inventory calculations for the deal. All information displayed is either entered by the user or derived by the system. For further details, please see separate document *Misys Loan IQ Sales Target Edit & Validation Rules*.

Syndication Worksheet

Launches the Deal's Syndication Worksheet. The Syndication Worksheet provides a consolidated view of all investor allocation information for a Deal and all of its Facilities. This separately licensed option is available in Deals in any state that precedes Closed. Phase I of the Syndication Worksheet, available in Release 6.0.09.02, supports the creation of a Syndication Worksheet only for Deals in which the Host Bank is both Agent and Lead Fronting Bank.

Unrestrict Deal

Option is available only to Restricted Host Bank Deals. Only a Restricted Deal's Access Manager(s) and the Loan IQ Security Manager can change a Restricted Deal to Unrestricted prior to closing; upon closing, the Host Bank Deal is automatically Unrestricted. **Option is never available to Non-Host Bank Deals**, which are Unrestricted when created.

Notes:

Cannot Unrestrict a deal if it has a restricted borrower.

Notifications **are not** sent when access managers are removed from the deal as a consequence of unrestricting.

Deal – Accounting Menu

Access to the following actions is provided under the **Accounting** menu in the Deal Notebook:

Change Accounting Enabled Indicator

Change Performing Status

Create As-Of Accrual Trigger

Create As-Of Amortization Trigger

Create Bill

Create Payoff Statement

Perform Online Accrual

Reclass

Auto Change to Non Performing Status

Note: Beginning with Release 5.5 and forward, with the exception of **Change Accounting Enabled Indicator** and **Auto Change to Non Performing Status**, **all** Deal Accounting Menu options, are disabled until after deal close.

Change Accounting Enabled Indicator

User with proper update authority may change the **Accounting Enabled** indicator from *Yes* (Indicator checked) to *No* (Indicator unchecked), and vice versa, at any time by selection of this option. An event will be written on the Events tab every time the **Accounting Enabled** indicator is changed, and current value of the indicator is always displayed on the MIS Codes tab. (When the Deal is created, the **Accounting Enabled** indicator defaults to value set for the **DACCE** (*Deal Accounting Enabled Default*) system parameter in the **System Parameter** table in GTM).

When accounting is turned OFF for a deal (by setting the **Accounting Enabled** indicator to *No*):

Fees will not be amortized.

Interest and fees will accrue but **no G/L entries** will be created for them.

No G/L entries will be created on-line for any released transaction.

No Loan IQ sub-ledgers are created and existing ones are **deleted** by the batch. Therefore, there is no G/L Reconciliation (no EOD balances).

When accounting is turned back ON, all balances will be initialized and supporting subledgers will be created during the subsequent **batch** cycle.

Notes:

Users need to know that an **overnight batch cycle must occur** in between turning accounting back ON and processing subledger-based transactions, because the subledgers are created during the batch. Otherwise, an error message indicating that the balance subledgers **do not exist** for the indicated GL grouping will be issued.

A Reclass is **not** performed when the *Accounting Enabled* indicator is modified.

Change Performing Status

Option is available only to Closed Deals. Performing Status at the Deal Level has two possible values: **Accrual** and **Non-Accrual**, and changing from one status to another affects all of the deal-level **accruing and amortizing** Admin Fee, but has **no effect** on any facility-level fees or outstandings.

When performing status changes from Accrual to Non-Accrual, G/L entries are generated to debit the Admin Fee Income Account for the Host Bank Shares of the **accruing** admin fees (and credit them back to the Fee Receivable Account, essentially writing them off). Conversely, when changing from Non-Accrued to Accrual, the Host Bank Share is debited from Fee Receivable and credited back to Admin Fee Income.

No G/L entries are generated for the **Amortizing** Admin Fees when the Deal's Performing Status changes (since the fees are paid in advance and have already been received). Amortization simply stops when Deal Changes to Non-Accrual Status.

Create As-Of Accrual Trigger

Option is available only to closed deals. Whenever an on-line transaction that affects accruing admin fees is released "as-of" a prior effective date, an "as-of" trigger is created that causes the batch accrual process to perform the "as-of" accruals that night. In addition, a properly authorized user can manually create an "as-of" trigger by selecting the **Create As-of Accrual Trigger** option in the Deal Notebook. Selection of this option creates an event in the Deal Notebook and will cause that night's batch accrual process to perform as-of accruals **for the accruing admin fees**, even though no "as-of" transaction has been posted on-line. Please note that selection of this option affects only the accruing admin fees; it has **no effect** on any facility-level fees or outstandings.

Create As-Of Amortization Trigger

Option is available only to closed deals. Whenever an on-line transaction that affects an amortizing admin fee is released "as-of" a prior effective date, an "as-of" trigger is created that causes the batch to perform "as-of" amortization that night. In addition, a properly authorized user can manually create an "as-of" trigger by selecting the **Create As-of Amortization Trigger** option in the Deal Notebook. Selection of this option creates an event in the Deal Notebook and will cause that night's batch to perform as-of-amortization, even though no "as-of" transaction was posted on-line.

Available in Release 7.3.1, when separately licensed for *CO Address On Billing*, the 'Bill Care Of Contact' is available for selection only to Deal Level Accruing, Amortizing Admin Fees and Deal Owned Event Fees.

Create Bill

Create Bill option is available to properly authorized users when the Deal Notebook is in *Update* mode, and bill produced includes the amortizing and/or accruing Admin Fees, as well as all Principal Due, Loan Interest, SBLC Fees and Ongoing Fees belonging to all of the underlying Facilities (regardless of their Facility Maturity Dates).

Demand bill is always consolidated, and includes all billable objects covered by the request, regardless of their Bill Borrower settings, except for Event Fee Payments (which are always excluded).

Demand Bill may be requested when Host Bank is not Agent, Sole Lender or Issuing Bank

Each billable item appearing on the bill has its own Adjusted Due Date, and the consolidated bill breaks on Due Date, so that a separate bill is produced for each unique Due Date. Within the bill for a particular Due Date, the items are sorted in the normal sequence (Agency Fees first, followed by Facility Level Principal, Interest and Fees).

The last cycle belonging to an Agency Fee, Ongoing Fee or Outstanding is the cycle that is billed. Any monies due prior to that cycle are reflected in Balance Forward.

> When billing Principal Due from Facility Amortization Schedule, the same logic employed when preparing the regularly scheduled bills is used. Scheduled Date for each scheduled item is interpreted as its Adjusted Due Date, and all principal calculated to be due within the *Billing* window is included.

The on-demand bills appear in the Demand Bills section of the Factory, and are included with the regular Bills on the *Bill Query Results* window, although they may be distinguished from the regular bills by their descriptions. Regular Bills do not have a Description and each Demand Bill has a **unique** Description composed of User ID, first 25 characters of Deal Name and Date/Timestamp.

Create Payoff Statement

Brings up *Payoff Statement Request* window so user may enter the desired Payoff Date (defaults to current business date but may be modified to any other **future** business date). The system-assigned **unique** Payoff Statement Description (composed of User ID, first 25 characters of Deal Name and Date/Timestamp) is also displayed so that user can find the Payoff Statement on the Bills/Payoffs page in Work in Process Notebook once it has been prepared.

A Payoff Statement may be requested for an individual Deal, Facility, Ongoing Fee, SBLC, or Outstanding. It may **not** be requested for just one of two active fees associated with a particular SBLC.

With the exception of **Event** Fees, no amount due from the borrower for this deal is excluded from the payoff statement, even amortizing or accruing fees that are paid in advance. It includes **matured** facilities and/or any amounts due that are normally flagged as *Do Not Bill* (but does **not** include any pending transactions).

Payoff Statements are **not** limited to those situations where Host Bank is the Agent or Sole Lender.

The **Principal Balance** of every active Outstanding is included in the Payoff Statement, and appears immediately after Balance Forward and before Total Due for every Outstanding.

The payoff statement reflects accruals projected through the date of the anticipated payoff (which need not be confined within the current cycle's End Date, but **cannot be less than the current date, and must be a business day).**

Consolidation logic for the payoff statement is identical to the logic followed when consolidating the bills, except that the Payoff Date is considered in place of the Adjusted Due Date and the Billing Date. In order to consolidate, the accrual line items for the Payoff Statement must be for the:

same Deal

same Borrower

same Owning Branch

same Processing Area

same Payoff Date

same Currency

but they may be for different facilities, and may cover a mixture of principal, interest, fees, L/C Fees, etc.

Since the payoff statement utilizes the existing line items (with the exception that the **current** line item in the current accrual cycle will be **projected** through the requested payoff date), the user should request an **on-line accrual** before requesting the payoff statement if the user is aware that something has changed today that affects accruals (for instance, a rate change). Performing the on-line accrual will correct the line items before they are used by the payoff statement. If nothing has changed since last night, user need not perform the on-line accrual before requesting the Payoff Statement.

Requesting a payoff statement on-line produces the requested payoff statement in a few minutes and makes it available in Work in Process for on-line viewing.

Perform Online Accrual

Option is available only to Closed Deals. Selecting **Perform Online Accrual** warns that when the on-line accrual is completed, all Notebooks will automatically be closed and any unsaved changes will be lost, and also that the requested on-line accrual may take a while to complete. Upon acknowledgment of the warning, the system determines the earliest "as-of" date for the deal (which may have been set by executing the **Create As-of Accrual Trigger** option, and then the system **re-accrues all accruing admin fees as-of that date**. Please note that the **Perform Online Accrual** option affects **only** the **accruing** admin fees. No amortization (or re-amortization as-of a requested date) is ever performed on-line.

Reclass

Option is available only to Closed Deals, and brings up window allowing user to enter an optional comment explaining the reason for the Reclass and/or to select the **GL Entries** button and inspect the **projected** GL entries that will be generated if the reclass proceeds.

Reclass essentially moves current subledger balances related to accruing and amortizing admin fees from their present G/L Account Numbers to the G/L Account Numbers derived using the current G/L mapping. May be the **same** accounts — so that the reclass simply debits and credits the same amounts from/to the same G/L Account Numbers.

Reclass moves the **already accrued** portion of a deal's **accruing** admin fees from the Fee Receivable Account where it presently resides to the Fee Receivable Account (using current G/L mapping).

Reclass also moves the **Unamortized** portion of a deal's **Amortizing** Admin Fees from the Deferred Service Fee Account where it presently resides to the Deferred Service Fee Account derived using current G/L Mapping.

Note: When a Deal's Performing Status is changed from Accrual to Non-Accrual, the already accrued Admin Fees are reversed out of Income and put back into a Fee Receivable Account. A subsequent reclass simply moves them from one Fee Receivable Account to another (if, in fact, **different** Fee Receivable Accounts are maintained for accruing and non-accruing Admin Fees). If different accounts are **not** maintained, the reclass simply debits and credits the same amount from/to the same account.

A Deal's **amortizing** Admin Fees, on the other hand, are not affected when the deal is placed on non-accrual (no G/L entries are created), and a subsequent reclass should be performed if, in fact, the unamortized portion of the Deferred Service Fee should be moved to a different G/L account.

Note: The primary reason why a user might choose **Reclass** is, in fact, to move the Unamortized portion of an Amortizing Admin Fees to a different G/L Account Number.

Auto Change to Non-Performing Status

Selecting this option displays the *Non-Accrual Tolerance Amount/Percentage* window which allows the user to set the Auto Change to Non Performing Status Rule for the Deal, as well as enter a tolerance amount or percentage.

Note: Auto Change to Non-Performing Status functionality is separately secured. Please refer to the *Misys Loan IQ User Profile – Application Function Security* guide (**Facility > Change Performing Status** section) for further information regarding User access.

Field Name	Req/Opts	Size/Format	Rules
Auto Change to Non-	Optional	Check box	Defaults to *N* (unchecked). When set to *Y* (checked), the batch will put underlying loans which have past

Performing Status			due interest into Non Performing Status, provided the **– ACPST** (*Automatic Change to Performing Status*) System Parameter is set to *Loan* or *Facility* for the branch of the facility for that loan. If set to *Outstanding*, only individual outstanding under the applicable facilities will go into non-accrual as they become past due and eligible for the Auto Change to Non-Accrual batch job. If set to *Facility*, once a loan under the facility becomes past due and eligible for the Auto Change to Non-Accrual batch job, the batch will throw the loan as well as the facility and all other loans under that facility into non-accrual. The system will consider a loan past due based on either the amount which has been billed but not paid if past due for the loan is based on billing or if the Adjusted Due Date of an Interest Cycle or the Due Date of a Loan Repayment Schedule item has passed (if past due is not based on billing). The actual date upon which a loan is considered past due will be either the Billing Date or the Adjusted Due Date or the loan (depending on whether or not the loan is billed) **plus** the number of days set by the **APSND** (*Auto Change of Performing Status Number of Days*) system parameter. Outstandings and Facilities will be put into a status of either *Non-Accrual* or *Non-Accrual – Interest & Fees to Principal* depending on the setting of the **ATNAT** (*Auto Transfer Non-Accrual Type*) system parameter. Available with Release 7.3 with separately licensed **Non-Accruals Enhancements**, defaults are set in the background without any warning. New values are derived from the Feature and Script Association Table, if matching record exists. Values are derived from system parameters (DACNP, ACNPT) directly if no matching record is available in the Feature and Script Association Table.
Non-Accrual Tolerance			*The below fields are available only when the above indicator is set to Y (checked).*
Amount	Conditional	Amount	Defaults to *zero*. On the deal level, may be entered and saved only if a percentage has **not** also been entered. If both percentage and amount are entered, the user will receive an error when attempting to exit the window. If Amount is saved, it will flow down to the loan level. If a loan is in a different currency than the deal, the Tolerance Amount will be translated at the spot rate for the loan currency.
Percentage	Conditional	Percentage	Defaults to *zero*. Cannot exceed *100%*. On the deal level, may be entered and saved only if an amount has **not** also been entered. If both percentage and amount are entered, the user will receive an error when attempting to exit the window. If percentage is saved, it will flow down to the loan level.

Notes:

Changes to any fields on the *Non-Accrual Tolerance Amount/Percentage* window will flow down to both pending and active loans. In the case of Non-Accrual Tolerance Amount and Non-Accrual

Tolerance, the new amount or percentage will not flow down if the amount or percentage has been changed on the loan level.

An Event is created on the Events tab of the Deal Notebook every time the Auto Change to Non Performing Status indicator is turned on or off and every time a Non-Accrual Tolerance Amount or Percentage is changed.

Financial Transaction Taxes

This option is available in a Release TBD with the VAT Tax and Turnover Tax functionality. This functionality is available with *Financial Transaction Borrower Tax Withholding* license.

Select Financial Transaction Taxes to view Tax Overrides at the Deal level. Deal overrides can be added, updated, and deleted at any time.

Sections:

Borrower Name - defaults to primary Borrower. The Tax Definitions and Overrides (shown in the lists) is for the selected Borrower. Changing to a different Borrower and clicking the Refresh button refreshes the lists with the Taxes and Overrides (for that different borrower).

Refresh Button - refreshes the list.

Tax Definitions - the Rate History button displays the Tax Rate History for the selected Tax Definition. The Override button is used to add an override for the selected Tax Type to the Deal Overrides list.

Borrower/Branch Tax Overrides - The list of overrides indicating indicate whether the override is a Borrower or Branch level override. The higher level overrides are not updateable and the Delete button is not available. The Rate History button displays the Override Rate History for the selected Tax Type.

Note: For Stamp Tax types, the Deal level override functionality does not allow users to override a Borrower Rates at the Deal level, but rather allows users to set an Override Percentage (of Borrower Rate) at the Deal level. The Delete button will delete an Overridden Borrower Percentage.

For a Stamp Tax (available with the Stamp Tax enhancement), the Override Rate indicator is set to *N* and is protected.

Deal Tax Overrides - The list includes a Rate History, Percentage Rate History, and Delete buttons.

Notes:

For an Overridden Rate, the Rate History button displays the Override Rate History. The Delete button deletes an Overridden Tax (including Rate History).

For Stamp Tax, at the Deal level, the Override Percentage indicator defaults to *N*. This indicator can be set to *Y* only for Stamp Tax.

When the Override Percentage indicator is set to *N*, (as always the case for non-stamp taxes) the *Current Percentage* defaults to 100% (but display as blank) for non-stamp taxes, and the appropriate higher level percentage for Stamp Taxes.

When the Override Percentage indicator is set to *Y*, (only possible for stamp taxes) the Override Percentage value is set for a particular borrower.

Tax Withholding Method - drop-down list to elect the Tax Withholding Method.

Deal – Payments Menu

Access to the following actions is provided under the **Payments** menu in the Deal Notebook:

Drop Dead Fee Payment

Paper Clip Transaction

Upfront Fee From Borrower/Agent

Upfront Fee Distribution to Primaries

Ticking Fee

Ticking Fee Payment

Ticking Fee Cancel

Drop Dead Fee Payment

Available only to deals that have been **Canceled** through the **Deal Died** option and are always distributable. Drop Dead Fees are distributed only to primaries, and the amount can be templated. A Drop Dead Fee can **only** be created and released for Host Bank Agented Deals. **Error** is received if user attempts to create a Drop Dead Fee and there are no primaries. **Error** is received if there are primaries, but no servicing group has been defined for any or all of the primaries.

Host Bank portion remains in FHAD, while other lenders' portions are distributed.

Drop Dead Fee Notebook: General Tab

Attribute	Req/Opt	Size/Format	Rules
Deal	System Generated	Display	Flow down from Deal Notebook.
Requested Amount	Required	System Amount Standard	Defaults to amount set in Event Fees Template, if applicable, and user can always override.
Currency	Required	Table: Currency	Defaults to Currency of the Deal, but may be modified to any other valid currency. Note: Facility Lender Shares must exist in order for lender shares of a Drop Dead Fee to be created. If there is no facility in the same currency as the deal, then a Drop Dead Fee cannot be created.
Actual Amount	System Generated	Display	Flows down from Requested amount.
Effective Date	Required	Date	Defaults to current business date. Can be any valid business date (but payment cannot be released prior to its Effective Date).
Cashflow	Required	Radio Button	Select from: From Borrower/Third Party From Agent
Comment	Optional	Display	User can enter a free form comment.

There are **Events** and **Workflow** tabs as well. The Events tab lists all major events in the life of the Drop Dead Fee, such as creation, approval, and release. The Workflow tab shows major tasks that need to be completed (*Create Cashflows*, *Approve*, *Release*, *Generate Intent Notices*).

File, Options and Queries Menus are also available, with similar options as can be found in other Fee Payment Notebooks.

Note: Drop Dead Fees may be distributed to third party customers outside of the deal's Bank Group, via the **Add Contractual Servicing Group Share** option on the **Options** menu of the *Lender Shares* window for the Drop Dead Fee. Shares must still equal the requested amount of the fee.

Paper Clip Transaction

Brings up the Paper Clip Notebook. Option is available to deals with ongoing fees or existing loans. Multiple payments (Fees, Interest, or Principal) can be made and associated with a single cashflow for this deal, but all of the principal, interest and fee payments must belong to Facilities that have the **same Processing Area**, since all the cash flows connected with the paper clip must reference the same Processing Area. Only users with a Processing Area matching the Paper Clip's Processing Area can put the Paper Clip transaction into *Update* mode (to modify it, approve it or release it).

Principal and interest payments cannot be linked via the Principal Payment Notebook, only through the Paper Clip function. Payments can be made on more than one transaction or more than one cycle for a transaction.

Paper Clip Payments created **prior to deal close** cannot be released until deal has closed.

For further details, please see separate document, *Misys Loan IQ Principal, Interest, and Fee Payments Edit & Validation Rules*.

Upfront Fee From Borrower/Agent/Third Party

If the Primary Borrower has been specified for the Deal, and Deal has a valid expense code, selection of this action allows the user to create and release a payment transaction to record the receipt of an Upfront Fee Payment (from Primary Borrower or Agent).

If Host Bank is Agent, payment is from the Primary Borrower, **but may be changed** to the Borrower or a Third Party.

If Host Bank is not the Agent, payment is from the Agent and **cannot** be changed.

Pending Transaction Notebook opens up for the pending Upfront Fee from Borrower/Agent, displaying the Deal Name, and the Name of the Borrower (or Agent) sending in the payment (together with its Servicing Group), and user must enter the Effective Date, Branch, Amount, Currency and an Optional Comment.

Once a pending payment has been created, it appears on the Pending tab in the Deal Notebook, and drilling down on it brings up the Payment Notebook (with its own **Options** and **Queries** menus, and its own Workflow and Event tabs).

Note: Upfront Fee use the Deal's Branch for the Cashflows, rather than the branch of the logged in user.

General (Upfront Fee From Borrower/Agent/Third Party) Tab

Attribute	Req/Opt	Size/Format	Rules
Fee Paid By	Conditional	Button	Available only if Host Bank is Agent. Allows the payer of the fee to be changed from the Primary Borrower (default) to any customer in the Loan IQ database. All cashflows and G/L entries will be adjusted accordingly
Servicing Group	Conditional	Button	Available only if Host Bank is Agent. Allows the Servicing Group of the Borrower or Third Party

			Payer to be changed.
Effective Date	Required	Date	Defaults to current business date. Can be any valid business date (but payment cannot be released prior to its Effective Date).
Branch	Required	Table: Branch	Defaults to Deal's Owner Branch, but may be modified to any other (valid) Branch. Note: Beginning with Release 5.5.08.02 and forward, the following separately licensed functionality applies: A soft warning message is displayed if the branch of the deal is not selected as the branch of the upfront fee payment. Users need the license file for Branch Override Warnings to use this enhancement.
Amount	Required	System Amount Standard	No default. User enters the amount of the Upfront Fee received from the Borrower or Agent.
Fee Detail	Optional	Button	This is separately licensed functionality and is available if System Parameter UPFBD is set to *Y*. Brings up the 'Fee Detail' screen. For further information, see Fee Details Screen section below on p. 230. **Note:** The 'Fee Detail' button will not be displayed, and available for selection, unless system parameter UPFBD (Upfront Fee Type Breakdown) is set to 'Y'.
Currency	Required	Table: Currency	Defaults to Currency of the Deal, but may be modified to any other valid currency. Valid currencies include the Facility currency of each Facility in the Deal. (Note: this does not include all allowable currencies for each Facility) The Currency list is determined by the funding desk associated with the branch, which is associated with the deal.
Comment	Optional		

An **Events** tab and a **Workflow** tab are also available. The Events tab lists all major events in the life of the Upfront Fee, such as creation, approval, and release. The Workflow tab shows major tasks that need to be completed (Create Cashflows, Approve, Release, Generate Intent Notices).

An Upfront Fee payment may be released for a deal that is **Pending,** or **Approved (and a Warning will be issued reminding the user that the Deal is not yet closed).** Once it is released, the amount of payment is placed in the **Fees Held Awaiting Distribution** bucket **(FHAD)** for distribution to primary lenders.

Note: The Upfront Fee from Borrower/Agent/Third Party can also be created in an Initial Drawdown Notebook. The cashflows in the Initial Drawdown Notebook will net the Upfront Fee due from Borrower/Agent against the funds remitted to the Borrower/Agent.

For more details, please see the Loan Edit/Validation rules.

Fee Details Screen

Field Name	Req/Opts	Size/Format	Rules

Fee Type	Display	Column	Displays the type of Upfront Fee Types (that have been added) that make up part/all of the Upfront or Amendment Fee Payment from Borrower/Agent/Third Party [or Upfront or Amendment Fee Distribution to Primaries] transaction. Initially the column will display no data. After data has been added, the column will display all Fee Types that have been added via the 'Add' button below.
Fee Amount	Display	Column	Displays the amount of each Upfront or Amendment Fee Type that is being paid [or distributed]. An error message will prevent the User from exiting the screen where a Zero amount exits for any Upfront or Amendment Fee Type. **Note:** the amount entered for any Fee Type will be in the currency of the Total Upfront or Amendment Fee Payment/Distribution.
Add	Optional	Push Button	Returns the 'Fee Detail' screen allowing the User to add any Fee Types (on the Pricing Fee Type Table) that has a Pricing Fee Category of 'Upfront'. **Note:** no validation will take place to ensure that this type of Upfront Fee exists in the Deal. For Amendment Fee Payment from Borrower/Agent/Third Party and Amendment Fee Distribution to Primaries transactions allows the addition of any Amendment Fee Type. Selection of a Fee Type from this dropdown list will result in the Fee Type appearing in the Fee Type column.
Remove	Optional	Push Button	Allows the User to remove any Fee Type that already exists in the Fee Type column. Fee Types must already have been added for highlight and removal to be available.
OK	Optional	Push Button	Returns the User to the Upfront or Amendment Fee Payment from Borrower/Agent/Third Party [or Upfront or Amendment Fee Distribution to Primaries] screen with updates applied.
Cancel	Optional	Push Button	Returns the User to the Upfront or Amendment Fee Payment from Borrower/Agent/Third Party [or Upfront or Amendment Fee Distribution to Primaries] screen without applying changes.

Also, the Total Amount entered for all Fee Types on the "Fee Detail" screen must match the Global Upfront or Amendment Fee Amount.

Upfront Fee Distribution to Primaries

Option is available **only** if **Host Bank is Agent** and Primaries with **Upfront Fees** exist. Fees are distributed to all primary circles on a prorata basis when the transaction is released. Amount field defaults to a total of upfront fees for all primary circles, including the Host Bank's amount, but user can modify. **However,** the Host Bank's share is retained, not distributed. The Host Bank share amount remains in FHAD, and G/L entries are created **only** for the other primary lenders in the deal.

An Upfront Fee Distribution **may** be released for a pending or approved, but a **warning** will be issued that the deal is not yet **closed** and **active.** However, it is not necessary for an **Upfront Fee Payment** to be made first. **This is also available for cancelled deals for distributing any funds left in FHAD.**

In the case of multi-currency deals, Upfront Fees are processed in the currency of the facilities, as shares of the fees are based on the Primary Lender's Shares of facility commitments. The default currency of the Upfront Fee Distribution to Primaries will be the deal currency. **However**, in order for the Upfront Fee Distribution to be created, in the deal currency, at least one facility must exist in the deal currency. The currencies of all facilities in the deal will be presented for selection and an Upfront Fee Distribution can be created in any of those currencies, provided that lender shares exist and that an Upfront Fee exists for that particular facility commitment.

General (Upfront Fee Distribution to Primaries) Tab

Attribute	Req/Opt	Size/Format	Rules
Effective Date	Required	Date	Defaults to current business date. Can be any valid business date (but payment cannot be released prior to its Effective Date).
Requested Amount	Required	System Amount Standard	Defaults to a total of Upfront fees for all Primaries in the deal, but can be modified. Note: If Upfront fees are added after primaries have closed, requested amount defaults to zero. The requested amount does not need to match the actual amount of the Upfront Fee Distribution to Primaries.
Fee Detail	Optional	Button	This is separately licensed functionality and is available if System Parameter UPFBD is set to *Y*. Brings up the 'Fee Detail' screen. For further information, see Fee Details Screen section below on p. 233. **Note:** The 'Fee Detail' button will not be displayed, and available for selection, unless system parameter UPFBD (Upfront Fee Type Breakdown) is set to 'Y'.
Currency	Required	Button	Defaults to Currency of the Deal, but may be modified. The only available currencies in the drop-down list are the currencies of any Facility under that Deal. **Note:** Changing currency changes the Requested amount to the amount calculated per the Fee Decisions in each Origination Primary circle for all Facilities and regenerates shares pro-rata.
Actual Amount	System Generated	Display	Flows down from Requested amount, but may be overridden.
Cashflow	Required	Radio Button	Select from: From Borrower/Third Party From Agent
Comment	Optional		

An **Events** tab and a **Workflow** tab are also available. The Events tab lists all major events in the life of the Upfront Fee Distribution, such as creation, approval, and release. The Workflow tab shows major tasks that need to be completed (Create Cashflows, Approve, Release, Generate Intent Notices).

Fee Details Screen

Field Name	Req/Opts	Size/Format	Rules
Fee Type	Display	Column	Displays the type of Upfront Fee Types (that have been added) that make up part/all of the Upfront or Amendment Fee Payment from Borrower/Agent/Third Party [or Upfront or Amendment Fee Distribution to Primaries] transaction. Initially the column will display no data. After data has been added, the column will display all Fee Types that have been added via the 'Add' button below.
Fee Amount	Display	Column	Displays the amount of each Upfront or Amendment Fee Type that is being paid [or distributed]. An error message will prevent the User from exiting the screen where a Zero amount exits for any Upfront or Amendment Fee Type. **Note:** the amount entered for any Fee Type will be in the currency of the Total Upfront or Amendment Fee Payment/Distribution.
Add	Optional	Push Button	Returns the 'Fee Detail' screen allowing the User to add any Fee Types (on the Pricing Fee Type Table) that has a Pricing Fee Category of 'Upfront'. **Note:** no validation will take place to ensure that this type of Upfront Fee exists in the Deal. For Amendment Fee Payment from Borrower/Agent/Third Party and Amendment Fee Distribution to Primaries transactions allows the addition of any Amendment Fee Type. Selection of a Fee Type from this dropdown list will result in the Fee Type appearing in the Fee Type column.
Remove	Optional	Push Button	Allows the User to remove any Fee Type that already exists in the Fee Type column. Fee Types must already have been added for highlight and removal to be available.
OK	Optional	Push Button	Returns the User to the Upfront or Amendment Fee Payment from Borrower/Agent/Third Party [or Upfront or Amendment Fee Distribution to Primaries] screen with updates applied.
Cancel	Optional	Push Button	Returns the User to the Upfront or Amendment Fee Payment from Borrower/Agent/Third Party [or Upfront or Amendment Fee Distribution to Primaries] screen without applying changes.

At Approval, at least on Fee Type must exist on the "Fee Detail" screen.

Also, the Total Amount entered for all Fee Types on the "Fee Detail" screen must match the Gobal Upfront or Amendment Fee Amount.

Upfront Fee Distribution to Primaries - Options

Modify Requested Amount

Regenerate Shares Pro Rata

View/Update Lender Shares

Cashflow

Generate Intent Notices

Generate Late Payment Reminder

Generate Claim On a Guarantor

Create Bill Trigger

Deal Notebook

Modify Requested Amount

Available only to transactions that are *Pending* or *Awaiting Release*. User selects this option to change the entered or default amount. If Lender Shares were tweaked prior to modifying requested amount, regenerated shares will be recalculated based on the current lender shares rather than pro-rata basis and a warning is issued which user may override.

Regenerate Shares Pro Rata

When this options is selected Lender shares are automatically recalculated based on the pro-rata basis.

View/Update Lender Shares

Option brings up *Lender Shares* window for this Upfront Fee Distribution. Lists only Primaries in the deal, as well as Host Bank Shares. User can drill down on Host Bank shares to view Branch/Portfolio/Expense Code information. Portfolio information cannot be modified. Portfolio Shares is the only place where the Host Bank's retention of upfront fees can be seen.

Fees may be distributed to customers outside of the deal via the Add Contractual Servicing Group Share option on the *Lender Shares* window. Existing shares must be adjusted accordingly so that the shares equal the requested amount of the Fee Distribution.

Cashflow

Option Brings up the *Cashflow* window and creates cashflows for this transaction. User will receive an **error** upon approval if Cashflows have not been created yet. Please see separate document, *Misys Loan IQ Cashflows Edit & Validation Rules,* for further details.

Generate Intent Notices

Allows user to prepare Intent Notice for all Primary Lenders for the Distribution of Upfront Fees. All Primary Lenders (except the Host Bank) with valid Notice numbers and contacts are included in the Notice Group. The Lender Share commitment amount is displayed on this Notice. Line items are not included. This eliminates the need to modify the Primary Allocation fax.

Generate Late Payment Reminder

Allows user to manually generate a Late Payment Reminder Notice. This is generated in the same way as an Intent Notices (to Lenders, Borrower, Guarantors, and Exporters/Sponsors. This notice may be generated multiple times, and each time it is generated, the notice will state how many times a late notice has been sent (e.g., First Notice, Second Notice, etc…)

Generate Claim on a Guarantor

Allows the user to generate a Claim on Guarantor Notice. When the user selects the **Claim on a Guarantor** option, a modified version of the Notices window appears, allowing the user to enter a Guarantor Risk Type, Percentage Risk and an Amount. The Notice is sent to any Guarantors defined at the Facility and/or Deal Level. Notices may also be sent to the Borrower, Lender and Exporters/Sponsors if desired.

Notes:

The Risk Type, Percentage Risk and Amount **do not** flow down from the Deal or Facility Notebook.

Although any customer may be defined as a Guarantor in the Deal or Facility, the customer **must** have a Guarantor Profile, with a valid Servicing Group and Contact with at least one Preferred Notice Method, in order to receive a Claim on Guarantor Notice (and of course, that Servicing Group must be added for the Guarantor at the Deal/Facility Level).

Deal Notebook

Returns the user to the Deal Notebook to which the Upfront Fee Distribution belongs.

Upfront Fee Distribution to Primaries - Status

Approve

Cancel/Uncancel

Release

Return to Awaiting Send to Approval

Send to Approval

Show Approval Status

Approve

If only one approver is needed (as defined in the Approvals Matrix for this transaction), this option is bypassed and transaction moved directly to a status of *Awaiting Release*.

Cancel

Cancels a Pending Upfront Fee Distribution. *Uncancel* becomes an option for cancelled transactions.

Release

Available only to transactions that have been **Approved**. A **warning** is issued if Notices have not been sent. Notebook is switched to *Inquiry* mode and no more changes can be made to the Upfront Fee Distribution Notebook. User will also be asked to complete cashflows if all money transfers have not been matched. Transaction is still released if cashflows are **not** complete.

Return to Awaiting Send to Approval

Returns a transaction that is *Awaiting Release* to *Awaiting Send to Approval* status.

Send to Approval

Available only to *Pending* transactions. Cashflows must be created first. Depending on Rules set in Approvals Matrix, can move the transaction to a status of *Awaiting Release*.

Show Approval Status

Displays the *Transaction Approval Status* window, which lists information from the Approvals Matrix that have been set for Upfront Fee Distribution, including Rules in Effect and Approvers. For details, please see separate document *Misys Loan IQ Approvals Matrix Edit & Validation Rules* for details

Upfront Fee Distribution to Primaries - Queries

Two options are available from the **Queries Menu** in the Upfront Fee Distribution to Primaries Notebook. G/L entries shows the G/L entries for this transactions. Notices lists any sent or pending Notices to the Notice Group for this transaction.

Ticking Fee

Beginning with Release 6.0 and forward, the following functionality applies: Selecting this option will bring up the *Ticking Fee* window which will allow the user to set an accruing fee on non-closed (pending or approved deals. The calculation of the Ticking Fee is based on the Deal Proposed Commitment. The Deal Proposed Commitment can be changed manually in the Deal Notebook up until the time the Deal is closed or cancelled.

The Projected Ticking Fee to today is calculated and displayed. If the Deal Projected Close Date has been defined, the Projected Ticking Fee to projected deal close is calculated and displayed every time the Ticking Fee general tab is accessed for deals that have not yet been closed or cancelled. The results of the calculations are not saved and there are no G/L postings until the Ticking Fee is paid. The Ticking Fee cannot be paid until the deal is closed or cancelled.

If the deal is already closed or cancelled, there is no Projected Ticking Fee to today and no Projected Ticking Fee to projected deal close. There is only a Ticking Fee Amount and Amount Paid to Date.

The Ticking Fee does not support user-defined schedules and transactions are not required to change the Deal Proposed Commitment Amount.

Selecting the Ticking Fee option in update mode when the Ticking Fee already exists opens the existing Ticking Fee window for review or update. The latest values for the applicable calculated amount fields are displayed. Selecting the Ticking Fee option when there is no existing Ticking Fee issues a warning message and provides the option to create a new Ticking Fee.

Ticking Fee

Attribute	Req/Opt	Size/Format	Rules
Deal Proposed Commitment Amount X	Conditional	Percent	Enter the Ticking Fee Rate. The Projected Amount to Today and the Projected Amount to Proj Deal Close Date are calculated/displayed accordingly.
Effective Date	Required	Date	Ticking Fee Effective Date.
Current Balance	System Generated	Display	Current Deal Proposed Commitment Amount
Expiry Date	Optional	Date	Ticking Fee expiry date.
Rate Basis	Conditional	List Box: Rate Basis	List of all standard Rate Basis codes displays.
Currency	System Generated	Display	Currency of the deal.
Projected Amount to today	System Generated	Display	For Pending deals, calculated amount. Note: For Closed or Cancelled deals this is replaced with Ticking Fee Amount.
Projected Amount to Proj Deal Close Date	System Generated	Display	For Pending deals, calculated amount. Note for Closed or Cancelled deals this is replaced with Amount Paid to Date.
Fee Paid By	Conditional	Button	Borrower customer name.
Servicing Group	Conditional	Button	Servicing Group name.

Ticking Fee Payment

Brings up the Ticking Fee Payment Notebook to allow payment of a ticking fee in full or partial. The option is selectable only when a Ticking Fee has been created. Users are allowed to make multiple Ticking Fee payments, but only one pending payment at a time is allowed.

At deal close or cancellation a Create Ticking Fee Payment item is created in the Workflow tab of the Deal notebook, however, users are allowed to create a Ticking Fee Payment prior to deal close or cancellation. The Ticking Fee Payment cannot be released until the effective date is reached.

The Ticking Fee Payment has the same events and statuses as an Event Fee Payment, however, an event Ticking Fee Payment is generated in the Pending tab of the Deal notebook for a newly created Ticking Fee Payment in Pending Status. When the Ticking Fee Payment is released, a new event Ticking Fee Payment Released is generated in the Events tab of the Deal notebook.

The Ticking Fee Payment Notebook has the same menus and tabs as the Event Fee Payment Notebook.

General (Ticking Fee Payment) Tab

Attribute	Req/Opt	Size/Format	Rules
Deal Name	System Generated	Display	Flows down from the Loan Notebook.
Deal Proposed Commitment	System Generated	Display	Flows down from the Loan Notebook.
Ticking Fee Amount	System Generated	Display	Total Ticking Fee Amount, read only.
Amount Paid To Date	System Generated	Display	Calculated Amount, read only.
Current Balance	System Generated	Display	Current Balance Amount, read only.
Fee Paid By	Conditional	Button	Available only when Host Bank is Agent. Allows payer of the fee to be changed from the Borrower (default) to a Third Party. Note: If cashflows have been created and the Payer of the fee is changed from Borrower to Third Party or vice versa, cashflows will be deleted.
Servicing Group	Conditional	Button	Available only when Host Bank is Agent. Allows the Servicing Group of the Borrower or Third Party Payer to be changed.
Requested Amount	Required	Display	User must enter an amount greater than zero.
Currency	Required	List Box	Defaults to the currency of the deal, but may be modified. User can select from list of available currencies.
Actual Amount	Required	System Generated	Total amount of Lender Shares.
Waived Amount	Conditional	System Generated	The amount of the fee that is being waived, as specified by the 'Waived' Option on the Status Menu. Will be updated if user chooses to modify the Waived Amount (via the Modify Waived Amount option on the Options Menu).
Effective Date	Required	System	Defaults to the Current Business Date but may be

		Generated	modified.
Cashflow From Borrower/Third Party	Conditional	Radio Button	If Host Bank is Agent, defaults to Borrower and cannot be changed. Cashflows will be from the Deal Primary Borrower and G/L Entries will be created accordingly.
Cashflow From Agent	Conditional	Radio Button	If Host Bank is Agent, defaults to Borrower and cannot be changed. Cashflows will be from the Deal Primary Borrower and G/L Entries will be created accordingly.
Comment	Optional	Free Form	Enter an optional comment.

An **Events** tab and a **Workflow** tab are also available. The Events tab lists all major events in the life of the Upfront Fee Distribution, such as creation, approval, and release. The Workflow tab shows major tasks that need to be completed (Create Cashflows, Approve, Release, Generate Intent Notices).

Ticking Fee Cancel

The Ticking Fee Cancel option in the Payments menu of the Deal Notebook in update mode, allows the cancellation of a Ticking Fee on a pending or cancelled deal. A cancellation warning message window is displayed.

Standard Costs Fee Payment

As per the separately licensed enhancement, *Amortizing Expense Fee over Deal Life*, available in Release 6.0.08.02 (Patch) and Release 6.0.09.05 the following functionality applies: The Standard Costs Fee Payment option brings up the Standard Costs Fee Payment Notebook to allow the creation of a new Event Fee Payment transaction. This Fee is amortized daily during the life of the Deal. The Fee is always a 'Flat' amount on per deal basis. At any time, there can be only one active Fee of Fee Type "Amortizing Deal Standard Costs" per Deal. A new Fee of Fee Type "Amortizing Deal Standard Costs" can be created in a Deal only upon expiry of the existing active Fee of the same Fee Type.

Note: The separate license **Default Amounts for Deal Level Expense Fee**, required to determine the amount of the fee to be amortized in the Deal Standard Costs table, is included with the license for the Amortizing Deal Standard Cost Fee Payment.

General (Amortizing Deal Standard Costs Fee Payment) Tab

Attribute	Req/Opt	Size/Format	Rules
Deal	System Generated	Display	Defaults to name of the deal.
Requested Amount	Required	System Amount Standard	Defaults from the Deal Standard Costs Code table, but can be modified. The amount is defaulted from the "Deal Standard Costs Code" table only if there is an active row for the Expense Code and Currency combination of the Deal. If there is no active row for the Expense Code and Currency combination, the amount is set to zero by default and users can change it. If the amount of the Fee is required to be changed after the Fee is released, this is done by expiring the existing Fee and creating a new one.

Currency	System Generated	Display	Currency Code of the Fee. Defaults from the Currency of the Deal and cannot be changed.
Actual Amount	System Generated	Display	Flows down from Requested amount.
Effective Date	Required	System Generated	Effective Date of the Fee. Defaults to the Deal Closing Date. If the Fee is created prior to Deal Closing Date, the Effective Date of the Fee defaults to the projected Deal Closing Date, if any. If there is no projected Deal Closing Date, the Effective Date of the Fee is the current business date. Thereafter, upon deal closing, the Effective Date of the Fee is reset to the Deal Closing Date. After the Deal is released, if the Deal Closing Date is required to be changed, it cannot be changed to a date later than the Effective Date of the Fee. Further, if the Deal Closing Date is changed after the Deal is released, necessitating a change in the Effective Date of the Fee, the existing Fee must be expired by the user and a new one created.
Amortization Expiry Date	Optional	Display	Amortization Expiry Date of the Fee. Users can enter the Amortization Expiry Date. If left blank, it floats with the latest Maturity Date of all the facilities in the Deal. If any of the facilities do not have the Maturity Date, the Estimated Maturity/Life Date is used. The Deal cannot be terminated if this Fee is not fully amortized.
Latest Facility Maturity Date	System Generated	Display	Latest Maturity Date of all the facilities of the Deal. If any of the facilities does not have a Maturity Date, the Estimated Maturity/Life Date is used.
Income Recognition Rule	System Generated	Display	Always defaults to “Amortize Straight Line upon Payment” and cannot be changed.
GL Mapping Class Code	Optional	List Box	Users can select from the list populated from the ‘GL Class’ Code table. This is the same table used in populating the ‘GL Class Mapping Code’ in the ‘Fee Amortization Accounting’ screen accessed through the ‘Accounting’ menu of the ‘Facility’ notebook. This code is used for mapping to a GL Account number. This field is not modifiable after the fee is released.
Portfolio Code	Required	Button	Portfolio Code of the Fee. Users can select the Portfolio Code for the Fee by clicking on the Portfolio Code button. The Portfolio Code and Expense Code of the Fee must be active codes on their respective code tables. In addition, the following rules are also required in respect of the portfolio/expense code: The Portfolio/Expense Code combination of the Fee must be an active combination in an active Risk Book. The Portfolio Code of the Fee must be associated with the Branch of the Deal as an active row in the

			Portfolio and Branch Association Code Table. If users choose an Expense Code other than the Expense Code of the Deal and if the Department and Expense Code enhancement is licensed by the client, then the Expense Code of the Fee must be associated with the Department of the Deal as an active row on the Department and Expense Code Association Code Table.
Expense Code	Required	Button	Expense Code of the Fee. Defaults from the Expense Code of the Deal. Users can change the Expense Code of the Fee by clicking on the Expense Fee button, in which case, the amount of the Fee defaults for the changed Expense Code and Currency combination from the "Deal Standard Costs Code" table in Table Maintenance. If the Expense Code of the Deal is changed after the Standard Costs Fee Payment is released, the Expense Code and Amount of the Fee remain the same. The Expense Code and Portfolio Code of the Fee must be active codes on their respective code tables. In addition, the following rules are also required in respect of the portfolio/expense code: The Portfolio/Expense Code combination of the Fee must be an active combination in an active Risk Book. The Portfolio Code of the Fee must be associated with the Branch of the Deal as an active row in the Portfolio and Branch Association Code Table. If users choose an Expense Code other than the Expense Code of the Deal and if the Department and Expense Code enhancement is licensed by the client, then the Expense Code of the Fee must be associated with the Department of the Deal as an active row on the Department and Expense Code Association Code Table.
Distribute to Lenders/Non-Distributed Indicators	System Generated	Display	This indicator is always set to "Non-Distributed".
Comment	Optional		

Note: In addition, the Standard Costs Fee Payment is subject to the following validations:

To add a new Standard Costs Fee Payment at the Deal level, the Deal must be in "Update" mode.

At any point of time, a Deal cannot have more than one active Standard Costs Fee of Fee Type "Amortizing Deal Standard Costs". If a Standard Costs Fee already exists in the Deal, it has to be expired in order to add a new Standard Costs Fee. Users are able to see the details of the existing/expired Standard Costs Fees in the "View Event Fee Payment(s)" option under "Payments" menu of the "Deal" notebook.

If a new Standard Costs Fee is created prior to Deal Closing and is in "Awaiting Release" status, it is automatically released upon closing the Deal. The Standard Costs Fee Payment cannot be released prior to Deal Close.

The Branch Code for the Standard Costs Fee is always the Branch Code of the Deal. Even if the Branch of the Deal is changed, the Branch Code of the Standard Costs Fee remains the same, unless the Fee is expired.

Users can enter an Amortization Adjustment transaction for a released Standard Costs Fee Payment transaction.

An **Events** tab and a **Workflow** tab are also available. The Events tab lists all major events in the life of the Standard Costs Fee, such as creation, approval, and release. The Workflow tab shows major tasks that need to be completed (Create Cashflows, Approve, Release, Generate Intent Notices).

An **Amortization** tab is available for all released transactions. The tab provides the ability to enter Amortization Adjustments to the transaction.

View Event Fee Payment(s)

As per the separately licensed enhancement, *Amortizing Expense Fee over Deal Life*, available in Release 6.0.08.02 (Patch) and Release 6.0.09.05 the following functionality applies: The View Event Fee Payment(s) option brings up the Event Fee Payment window to view existing fee payments.

Note:

The daily amortization of the Standard Costs Fee begins from the Effective Date of the Fee.

The daily amortization of the Standard Costs Fee ends on the Amortizing Expiry Date of the Fee.

The amount of the Fee to be amortized daily is calculated by dividing the Fee obtained from the “Deal Standard Costs Code” table or as overridden by the user by the duration between the Effective Date and Amortization Expiry Date of the Standard Costs Fee.

If this Fee exists in a Deal, an Amortization trigger as of the Effective Date of the Fee is created if any of the following is changed:

The Amortization Expiry Date of the Event Fee.

The Maturity Date or Estimated Maturity/Life Date of any of the facilities, if the Amortization Expiry Date is floating and if it results in a change in the Amortization Expiry Date.

An amortization trigger is created as of the Effective Date of the Standard Cost Fee Payment at the time of releasing the Fee if the effective date of the Fee is prior to the current business date.

The amortization method supported for the Standard Costs Fee is Straight Line amortization.

If a Mass Expense Code Change Transaction is launched, this Standard Costs Fee moves to a new Expense Code if it's Deal is included in the file of DTN's created by the user. It also includes appropriate changes in the accounting.
